in their area, have found that there are more than 1,100 children over fourteen years of age being educated in these schools. After going carefully through the reports of the work of the Bristol private schools, the Committee have decided upon a plan which could not easily be improved upon. The efficient schools are at once accepted as part of the educational provision of the area, but such schools are granted a certificate of efficiency for a limited time only and will be re-examined from time to time. This is quite as it should be, for a school which is thoroughly efficient now may become inefficient in a year or two, unless constant care be exercised. We feel sure that the principals of these recognized schools will appreciate the advantage to them of periodical inspection. No less wisdom has been shown with regard to the inefficient schools. Letters have been sent to the principals asking what they propose to do to bring them up to date, and the Committee have expressed a hope that not a few of these unsatisfactory schools may make the necessary effort to become worthy of inclusion in the general scheme, and, further, have stated that such schools will be kept under observation. We hope that the principals of all the private schools will respond worthily to the considerate treatment of the Bristol Education Committee, and that other committees will pursue a similar policy. It is encouraging to note that the Board of Education have congratulated the Bristol Committee upon the systematic manner in which they are dealing with a difficult problem.

DR. HAMER, in his recently issued report on the London School Medical Service for 1919, points out that, following a time of conflict, there almost inevitably succeeds a pacific era, very hypercritical and given to lugubrious statements as to national physique. In these circumstances he reviews the evidence available as to the changes in national physique noted during the last fifty years, finding everywhere testimony to improvement. If our present population be described to-day as C 3, an alphabetical description in former days would have involved the use of the letters X, Y, or Z. Even since medical inspection was seriously commenced at the beginning of this century, conditions have much improved and minor ailments are vastly lessened. This shows itself markedly in the condition of candidates who have obtained scholarships to secondary schools, while there is similar evidence of increased attention on the part of the parents to the health of children of all classes. This changed attitude is leading to all-round improvement in physique, and it is increasingly possible to care for deviations from normal health which arise with adolescence. The co-operation and work of the teachers of physical education have proved invaluable, and the better graduation and individual application of school gymnastics are doing away with round shoulders and slight spinal curvatures at one time supposed to be marks of the studious pupil. Medical inspection in London secondary schools was so arranged during the war that every pupil was seen biennially: in future each is to be seen annually, with a complete examination at the ages of twelve and fifteen years. As similar complete examinations are to be carried out in the continuation schools, the benefits hitherto derived by the secondary-school pupils will be extended to the whole population, and should lead to some control of the beginnings of ill-health.

THE statistical tables dealing with secondary-school pupils attached to Dr. Hamer's report show, as in the past, a somewhat greater incidence of minor defects among the girls, with more evidence of strain. This feature is worthy of the serious attention of educationists, as it points to a need for further consideration of the out-of-school life of girls, there being no reason to suppose that school conditions are less suited to one sex than to the other. Probably the average girl is more conscientious in the matter of home work, and takes a more serious view of education, than the boy, who will not sacrifice his games. The usefulness of the girl in the home leads, too, to her being detained over domestic tasks, at hours during which the boy is left to himself. Strain involved in such subsidiary matters as music practising may be responsible in some instances. On the mental side, also, girls are affected by their closer association with parents, particularly their mothers, and so feel the effects of home worries. A proportion of breakdowns in later training are associated with a combination of domestic worries and the strain of impending examinations. A comparison with records of some years back shows a marked improvement in all directions, and it is evident that, speaking broadly, the present generation of pupils are better circumstanced, and better fitted for the battle of later life, than were their predecessors.

The Health of Girls.

IN 1909 the Board of Education issued a Circular to local education authorities relating to the revision of the regulations affecting the staff of public elementary schools. It was stated that the changes then announced represented a step in the path of educational reform, and, as the changes limited more particularly the activities of the supplementary teacher, it was supposed that in due course she would speedily disappear from the ranks of recognized teachers. A further Circular now issued appears to give the twelve thousand supplementary ladies who are now in the schools a new lease of life. In future, however, local authorities must satisfy themselves of the physical capacity of candidates for appointment, so that something more will be required than the qualification of being a young woman over eighteen years of age who has been successfully vaccinated. They must be enabled to prepare and improve themselves for the practical work of teaching by such means as it may be possible to devise. Authorities are also urged to provide supplementary teachers with facilities to enable them to seek qualifications as teachers under the Code. In considering the employment of these teachers in any area, special regard will be given to the arrangements made for this purpose. In future, notification of an appointment is to be made directly to H.M. Inspector, and not to the offices of the Board.

Supplementary Teachers.

SO long ago as 1909 the Board of Education issued a "Temperance" syllabus, and early in the present year the conclusions of the Advisory Committee on Alcohol of the Central Control Board was published by H.M. Stationery Office, under the title, "Alcohol: its Action on the Human Organism." The Board now come forward again with a pamphlet on "The Hygiene of Food and Drink," containing a syllabus of lessons for use in schools, and notes for the assistance of teachers.

The Teaching of Temperance.

The question whether such instruction should form the subject of a special series of lessons, or be included in a general course of elementary hygiene, is left open, as is also the question whether the instruction should be given by the ordinary teacher or by a specialist. We imagine, however, that most experienced teachers would vote in favour of the ordinary teacher giving the instruction as part of a general course. To such a teacher the Board's pamphlet will prove very suggestive and valuable. "A healthy life," says the prefatory note, "depends mainly on consistently good habits, and the appreciation and practice of a few simple and direct laws of health." For the first of these requirements the home must, we think, continue to be primarily responsible; but for the second, and in some degree for the first, the school is responsible. To inculcate sound hygienic principles, and to give plain straightforward reasons for them, without preaching or obvious moralizing, is here indicated as the teacher's best course.

THE BOY SCOUT MOVEMENT.

ENGLAND has been the theatre of many historic congresses of adults, but the recent great congress of the youth of the world, held at Olympia, will probably surpass all others in its achievements. The features of the Jamboree, with its unique exhibition of Scoutcraft, are already too well known to call for an enumeration here. The most casual reader of the arresting event which took place at Olympia during the first week in August must have realized that the Scout Movement, which twelve years ago was in its infancy and is now represented by at least two hundred thousand active scouts in the British Isles alone, embodies all the essential principles which make for true physical, mental, and moral progress. Thanks to the vision and personal example of the Chief Scout, to the activities of an enterprising organization, and to the personal enthusiasm and altruism of enlightened individuals, scout troops have sprung up during the last twelve years all over the country—in the populous centres of industrialism and in the peaceful hamlets of rural England. This valuable work has now culminated in a world-wide demonstration characterized by the keen spirit of cheerfulness, inventiveness, enthusiasm, and *esprit de corps* which are typical of the Scout Movement.

To those of us who are professionally responsible for the education of the young, a more significant appeal is made. The Chief Scout and his official supporters have never failed to emphasize the strong educative basis of the Scout Movement. Much support has been given to this truth by the President of the Board of Education, who recently expressed the hope that a serious attempt would be made to incorporate the Scout Movement in our system of national education. Although much work is being done in this direction more could still be done by those engaged in secondary education. It is sometimes argued that there is no strong justification for the introduction of the Scout Organization into our secondary schools, inasmuch as the pupils attending such schools are subject to the influence of a good moral discipline both at home and at school, and also because the various activities usually found in the corporate life of these schools are an adequate substitute for the training offered by the scout organization. This is by no means true in practice. However flourishing a secondary school may be in its extraneous activities, a wide field is still left for the practical application of those principles which are the fundamental basis of the Scout Movement. Viewing educational training merely from the point of the acquisition of knowledge, it must be admitted that there is much in a boy's life left untouched by the formal lessons given in a classroom, by the practical work in a laboratory, and by the other

activities common in our secondary schools. The scout organization supplies this need. A scout troop subject to the wise guidance of a scoutmaster endowed with a strong personality is an invaluable adjunct, and offers a wide range of possibilities for the application and extension of school instruction. Although badge work is not the main purpose of a scout troop, its good effects on school work cannot be ignored, while the conditions under which a scout educates himself for a special badge are admittedly sound from the true educational point of view. Scouting makes the acquisition of knowledge a living process.

There are, however, moral considerations of greater import than the correlation of facts which obtains in badge work. The system of discipline to which every scout subjects himself is incontestably of the best kind, inasmuch as it aims at two of the most important factors in moral development—self-realization, so that a boy may know his own true worth, and the release of the individual from selfishness, so that he may live for others. Every scout troop offers facilities for the practical application of the highest moral principles possible to a boy. This is true in the case of every scout, while those who are elected to office, such as that of a patrol leader, receive a training which is more valuable than that of a prefect in the ordinary non-residential secondary school. Any school in which the principles of scout discipline are actualized is morally healthy.

It is in its corporate aspect that scouting is most influential in its effects on character. The best scouting is done collectively and in the open air—which is the natural element of the normal boy. Field days can be arranged during the term. These afford opportunities for physical training and for important educational work in geography and practical mathematics. During the summer term the scout troops can live under canvas, if not *en masse* at least in sections subject to a definite rotation. A summer term camp is already a popular attraction in those secondary schools which possess a strong scout troop. The advantages of camp-life are obvious: a boy is taught to be self-reliant, to minimize physical inconveniences, and, at the same time, to realize his responsibilities as a social unit. Trek camps arranged during the holidays confer inestimable physical advantages on boys and simultaneously provide scope for the acquisition of much that is valuable in geography, geology, natural history, architecture, and in political and social history.

Finally, any school which makes the scout organization an integral part of its corporate life is established on a strong religious basis, since the ideal of universal brotherhood is consciously and constantly kept in view. Every scout is in honour bound to be morally alive and to regard truth, self-respect, loyalty, and charity as matters of the greatest practical urgency. All who attach due importance to these essential factors in education will recognize the truth that underlies the words of the Chief Scout, uttered at the conclusion of the Jamboree:

"Differences exist between the peoples of the world in thought and temperament, just as in language and physique. The war has taught us that where one nation tries to impose its will on others cruel reaction is bound to follow. The Jamboree has taught us that, where mutual forbearance and give and take are practised, sympathy and harmony are established. If it be your will, let us go forth from here determined to develop among ourselves such comradeship through the world-wide scout spirit of brotherhood that may help this happiness and good will henceforth to reign among men. Will you join in this high endeavour?"

The youth of the world leagued together in the bond of universal brotherhood, as advocated by the Chief Scout, should prove to be nothing less than the most efficient ancillary factor in the realization of the aims of a true League of Nations. Sincere tribute should be paid to that courageous and unselfish body of men—the scoutmasters—who, despite many obstacles and at the expense of much personal inconvenience, devote so much of their leisure to this movement. The demand for such disinterested men of vision and action is ever greater than the supply.

THE USE AND PLACE OF PRACTICAL WORK IN TEACHING GEOGRAPHY.

By T. ALFORD SMITH.

WITH few exceptions, teachers of geography now acknowledge the utility of practical exercises and practical work as an important part of the geographical course. Some teachers, however, have raised objections to practical exercises because of the difficulty in getting suitable materials and because of the time taken in doing such work. The first objection is no longer serious, as many good textbooks now provide ample materials; the busy teacher, therefore, is not obliged to get statistics from original sources, and he finds everything prepared for him in the most suitable form. The question of time is a more difficult matter, but the difficulty is often more apparent than real, and it is due either to inexperience on the part of the teacher or to a misconception as to what is really wanted.

In the first place, practical work should not be considered as a branch of geography to be dealt with by itself, but rather as a most important means of explaining and illustrating the ordinary geography lesson. To work slavishly through sets of exercises in textbooks called "Practical Geography" is a great mistake, and may easily become a sheer waste of time. The proper use of such books is to provide materials in a concise form, and to suggest various methods of doing the work.

In order to save time the skilled teacher will adopt many devices, and among these the following may be noted:—

(1) By making a careful selection of a few typical examples on which he will concentrate the attention of his pupils. It is unnecessary for a boy to work more than one example of a particular type of exercise.

(2) By a division of labour. This method should be adopted wherever possible; for example, before drawing a temperature graph, it is often necessary to make out a table of monthly averages from the record of daily temperature readings. In a form of twenty-four boys the required results could be quickly obtained by setting two boys to find the average for the month of January, two others the average for February, and so on. As the results are read out each boy makes up a list for the twelve months, and proceeds to draw his graph. By working one example out of twelve the boy learns the method, and nothing is gained by letting him work out the other eleven. Percentage tables can be dealt with in a similar way. This method can also be employed with great advantage when contour maps of small areas (such as ordnance maps, reduced survey maps, and others) are being studied. Selected contours can be traced by one set of six boys (out of a form of twenty-four), rivers by a second set, roads by a third, and railways by a fourth. The maps can then be studied together by superimposing one upon another.

(3) By using approximate values and quantities; all data for practical exercises should be given as approximations, as great precision is not wanted, and diagrams based on approximate numbers are just as effective for geographical purposes as those drawn with mathematical accuracy.

In ways such as these much time can be saved. In a lesson of forty-five minutes ten to fifteen minutes can be profitably spent in doing a practical exercise if the data be ready to hand; if, however, the data have to be prepared in this time, then the diagram might be drawn for home work. When work is being done out of doors the whole lesson of forty-five minutes would probably be required for it, but, of course, this would happen only occasionally.

So far as possible practical exercises should be typical in character; that is, they should be of such a kind that other exercises can be based on them—e.g. the population and area in square miles being given, the density of population per square mile can be readily calculated. In the case of England and Wales this will be about 620, Norway 10, and

Sweden 32. If three equal squares be drawn (each to represent one square mile) little difficulty will be found in putting 19 dots in the first, and 32 in the second, but it is somewhat difficult to put 620 in the third. This simple diagram therefore sufficiently emphasises the difference in density of population between England and the other two countries, and it can afterwards be used as a basis of comparison when other countries are being considered.

Again, isolated examples should be avoided wherever possible; in this respect many so-called practical geographies err very greatly, for in them exercises are set which lead nowhere; in some cases they do not even illustrate any part of an ordinary geography lesson, and they seem to have no relation to the other problems dealt with in the book. Two examples will perhaps make the matter clear.

(1) Drawing a section from a contour map is a purely mechanical exercise, and it can be done quite well by a person possessing little or no geographical knowledge. It becomes valuable in geography only when it leads (a) to visualization of the shape and features of the district, and (b) to a realization of visibility or non-visibility of distant objects.

(2) Measuring the noon altitude of the sun by means of the shadow thrown by a needle or stick on a horizontal plane is a simple and interesting piece of practical work, but by itself it is of little geographical use. The angle thus measured must be used to calculate the latitude of the place, to show that the intensity of the rays of the sun increases with the size of this angle, and that the control of the sun largely determines many of the factors of climate; from a series of noon altitudes the apparent path of the sun in the ecliptic may also be shown.

It is not meant that all these things must be done one after another at a particular time; it is often of great advantage to leave a loose end, which will be taken up later on. The important point is that the teacher should decide at the very outset why he is setting a particular exercise, of what value it is at the moment, and to what use it can be put in future lessons.

In many secondary schools the geography course is now arranged to meet the requirements of the General School Examination of the University of London. This examination is taken about the age of sixteen, and the preparation for it is spread over four years. In many cases the time allotted to geography is only an hour and a half a week, and in this short time the geography of the world has to be studied on broad lines, and the British Empire and Europe in some detail. In these circumstances each teacher must, of course, make out a scheme of work to suit the particular conditions under which he is working; as a rule, he will probably find it best to cover the syllabus in three years, and reserve the fourth year for revision and special teaching.

As regards practical work the following plan is suggested:—

First year.—The meaning and use of a map; (a) measurements in the school playground or cricket field; easy exercise to draw a plan of the field by plane table or some other method; north-south line to be found in several ways, such as equal altitudes of the sun, the hour hand of a watch, the north star and magnetic compass.

A large-scale ordnance map to be oriented (preferably one showing the school and field), distances and true bearings to be measured on it. The scale of the map to be explained; maps drawn to different scales to be examined; small areas to be marked out on a map, and then drawn to a larger or smaller scale. Areas on the map to be calculated by using squared tracing paper.

(b) Measurements to be made on the globe; latitude and longitude to be studied first on the globe, then on the map. From lines of latitude distance north or south of the equator to be measured, direction due east and west to be indicated, and variation in day and night to be found. From lines of longitude, distance east or west of the prime meridian to be

measured; direction due north and south to be indicated and difference in time to be calculated.

(c) Contour maps; contours to be explained in the first place with models made of plasticine or other solid; exercises from contour maps; drawing sections, finding the heights of places in any part of the map, shading the areas which are invisible from a given height and so on.

Second year.—The thermometer and barometer to be read every school day at a fixed time; a record of the readings to be kept; graphs to be drawn from these readings. Average temperatures and average pressures to be found for each week or each month; the results to be used to explain isotherms and isobars. Rainfall record to be kept, and diagram to be drawn. The records of temperature, pressure, rainfall, to be studied in relation to the Daily Weather Report issued by the Meteorological Office. Climatic maps, vegetation maps to be examined, and exercises to be set on them.

Third year.—(a) Trade returns and various other statistical tables to be studied; the facts obtained from them to be represented diagrammatically. Commercial maps, the world's products, the important trade routes to be examined.

(b) During this year, as the opportunity occurs, work left incomplete in the first two years should be finished in order to reach the conclusion of each investigation.

The whole series of exercises that have been done during the three years will form a most valuable record of the work, and will prove a most useful means of revising the work in an expeditious and effective way.

In the early stages of the course progress will probably be slow, but it is nevertheless of great importance. If practical exercises are chosen with discretion and worked in an intelligent manner, they provide a valuable mental training, and they assist a boy to think in an accurate way; they also enable him to draw legitimate inferences from a given set of facts, and to develop a sense of proportion and perspective with regard to the various parts of his geographical work. Lastly, boys who have been trained in this way are not likely to make the wild statements which are still very common in the answers to examination questions.

PERSONAL PARAGRAPHS.

IN the death of Sir Norman Lockyer there has passed away another of the famous men of science who first won distinction by amateur research, inspired by the love of science alone. Although his father was a science lecturer, Norman Lockyer accepted a clerkship in the War Office in 1857, and devoted his leisure to the study of astronomy with remarkable success, being elected, in 1860, a Fellow of the Royal Astronomical Society, a marked distinction for an amateur astronomer in his twenty-fourth year. In 1868, Janssen, the French astronomer, and Lockyer discovered independently the method of observing solar prominences, without waiting for an eclipse, by applying the principle of the dispersion of light. It was Lockyer who detected in the sun's spectrum, with his spectroscope, the new element, helium, unknown to terrestrial chemists. Twenty-seven years later, Sir William Ramsay discovered the same element in a Norwegian mineral. In the year following his discovery of helium, Sir Norman Lockyer was elected a Fellow of the Royal Society. For some thirty years he was director of the Solar Physics Observatory attached to the Royal College of Science at South Kensington and afterwards transferred to Cambridge, and his famous lectures on astronomy will be remembered by many old Royal College of Science students. He became a leading authority on solar eclipses, and between 1890 and 1905 he was chief of eight expeditions to various parts of the world. In 1903, Sir Norman was President of the British Association, and his address on "The Influence of Brain-power on History" was published in volume

(Continued on page 586.)

form. He wrote extensively on astronomy, and was editor of *Nature* for fifty years. Among the theories which he advanced may be mentioned his dissociation hypothesis, his revision of Laplace's nebular hypothesis, and his explanation that the circle of stones at Stonehenge were arranged by worshippers of sun and stars so as to catch the sun's rays in a definite way at certain times, and thus serve the people of those days as an almanac.

* * *

BRITISH Science loses still another distinguished representative by the death of Prof. John Perry, Emeritus Professor of Mechanics, Royal College of Science, and general treasurer of the British Association. Prof. Perry was widely known as an eminent mathematician and as one who had taken a great part in the establishment of mathematics as a practical science. His books on practical mathematics have been extensively circulated and translated into many foreign languages. An Irishman by birth, Prof. Perry was educated at the Modern School, Belfast, and at Queen's College, Belfast. He was a Whitworth Scholar, Peel's Prizeman, and Gold Medallist at Queen's, and when twenty years of age he became an assistant master at Clifton College. After acting as assistant to Lord Kelvin, he served for four years as professor of engineering in Japan. On his return to England, he set up with the late Prof. Ayrton as a consulting engineer, a partnership which resulted in many electrical inventions and brought forth many important new forms of electrical instruments. In 1881 he accepted the professorship of engineering and mathematics at the City and Guilds of London Technical College, and in 1896 he became professor of mathematics and mechanics at the Royal College of Science, South Kensington, from which he retired six years ago. He was characterized by an impulsive warm-hearted nature, and his numerous acts of kindness and his genial sympathy endeared him to all his students. One of his most famous lectures was on "Spinning Tops," given as the "Operatives' Lecture" of the British Association meeting at Leeds in 1890. He was a past president of the Electrical Engineers and of the Physical Society, and in 1913 he was chosen by the British Government to go out to South Africa to investigate the conditions of education there, and to advise in the drawing up of a scheme for the foundation of the South African University under the Otto Beit bequest. During the last few years he gave scientific advice on war and devoted his mathematical knowledge to the study of gyroscopic compasses.

* * *

SIR NAPIER SHAW'S successor as director of the Meteorological Office is to be Dr. George C. Simpson, who served as meteorologist with Captain Scott's Antarctic Expedition of 1910-12. Dr. Simpson is a native of Derby and son of a former mayor of the town. He was educated at the Diocesan School, Derby, Owens College, Manchester, and at Göttingen. He was an 1851 Exhibition scholar, and spent a couple of years in Lapland investigating the electrical state of the atmosphere. In 1905 he was appointed a scientific assistant in the Meteorological Office, London, and in the following year joined the staff of the Indian Meteorological Department. During the war he held an appointment under the Indian Munitions Board.

* * *

MR. C. H. SAMPSON, Fellow and Senior Tutor of Brasenose College, Oxford, who has recently been elected principal in succession to Dr. C. B. Heberden, was educated at Bristol Grammar School, and took up residence in Oxford as a mathematical scholar at Balliol in 1878. He obtained Firsts in Classical and Mathematical Moderations and the Mathematical Final School. He also won the Junior Mathematical Scholarship and took his M.A. in 1885. He was elected to a Fellowship at Brasenose in 1882, and has since been responsible for the mathematical work of the college. He has obtained a reputation outside Brasenose as an inspiring teacher and lecturer, and has always taken a keen interest in university affairs. He was largely responsible for the

organization of the movement to amend the charter of Responsions. The college owes much to Mr. Sampson's work during the last thirty-nine years, for the greater part of which he has been senior tutor, and he has endeared himself to the students by the intense interest which he takes in them personally.

* * *

THE KING has approved the appointment of the Rev. Canon E. H. Kempson, Canon Residentiary of Newcastle Cathedral, to be Bishop Suffragan of Warrington, in succession to the Right Rev. M. L. Smith. Canon Kempson went from Rugby to Christ Church, Oxford, where he took a First Class in Mathematical Moderations and Final Schools. He was ordained in 1886, and, after holding a curacy at Oxford, he served as an assistant master at Clifton and Harrow. From 1899 till 1912 he was principal of King William's College, Isle of Man, resigning this position on his appointment as Canon Residentiary at Newcastle.

* * *

MR. MAXWELL GARNETT, Principal of the Manchester College of Technology, whose resignation was referred to in our August issue, is taking up the position of General Secretary to the League of Nations Union at an early date. At the last meeting of the Manchester Education Committee, the Chairman, Sir T. T. Shann, stated that the energetic efforts of Mr. Garnett during the last eight years to promote a closer relationship between the activities of the college on the one hand and industry on the other had been instrumental in causing a wide and general realization of the mutual interests of the college and the industries served by it.

* * *

IT is reported that Prof. Gilbert Murray, of Oxford University, has agreed to be nominated as Liberal candidate for the Lord Rectorship of Edinburgh University, Lord Grey being unable to accept.

* * *

THE announcement is made in the press that Sir John David McClure, head master of Mill Hill School, will receive the freedom of the borough of Wigan, of which he is a native. His family have been intimately associated with the life of the ancient Lancashire borough for several generations.

ONLOOKER.

TOPICS AND EVENTS.

SUMMER SCHOOL OF CIVICS.—That there is a keen interest in, and a great desire for, knowledge of modern civics was indicated very plainly at the Summer School organized by the Civic Education League, and held at High Wycombe during the first fortnight in August. Some 120 students, consisting of training college lecturers, elementary- and secondary-school teachers, health workers, and others engaged in social activities, assembled for lectures in the mornings, excursions or visits to factories, &c., in the afternoons, and lectures again in the evenings. It was arranged that a series of evening lectures, open to the public, on Reconstruction should take place, and these were introduced by Mr. G. P. Gooch on "Modern Ideas on the State and Society," and proved attractive to the citizens of High Wycombe, who provided large audiences each evening. For the ordinary student, courses of lectures were held on such subjects as "The Psychology of Primitive Life," by Mr. B. Garrod; "The Foundations of Civics," by Miss E. M. White; "Principles and Practice of Sex Education," by Miss N. March; "Public Administration," by Miss Bright Ashford; and "English Buildings from the Civic Point of View," by Mr. A. G. Henderson. More advanced courses were provided by Mr. A. Farquharson and Mr. L. Mumford on "The Principles of Reconstruction," and Mr. G. H. Green on "Analytical Psychology." In addition to these courses were some arranged by the National League of Health and the National Council of Social Service; and, especially for teachers, lectures on the teaching of civics, school ceremonials, and continuation schools were given. Mr. F. J. Adkins conducted a class on public speaking, which was much appreciated. During the fortnight, Dr. F. H. Hayward organized two of his

school ceremonials, one in honour of the city and the other to commemorate the League of Nations. These were carried out by the staff of the Summer School, and proved impressive celebrations. The discussions after the lectures reached a high level, and showed that the Civic Education League has a useful future before it if it satisfies the demands that are likely to be made on it.

VACATION TERM FOR BIBLICAL STUDY.—The eighteenth Vacation Term for Biblical Study was held at Oxford from July 31 to August 14, and, by the kindness of the authorities, the students, to the number of some 170, were housed in Somerville and St. Hugh's Colleges. The term opened on Sunday, August 1, with an inaugural address given in the University Church by the Rev. Dr. Lock, Lady Margaret Professor of Divinity. The subject was "The Bible," and Dr. Lock pointed out the real gain to faith which comes from a reasoned study of the Bible and a realization of the continuity between the Old and New Testaments. During each week there were two courses of four lectures each. In the first week the Rev. Dr. Wade, of Lampeter College, lectured on "The Theology of the Book of Genesis," and traced the evolution of thought from primitive ages to the time of the writers of the Genesis narratives in connexion with such subjects as the Creation, the Fall, Worship, and the idea of Redemption, in each case connecting ancient ideas with modern thought. The course was a useful introduction to a very large subject. Miss Alice Gardner, Reader of Byzantine History in the University of Bristol, gave an interesting account of "The Roman Empire in the First Century A.D.," in which she dealt with the growth, the government, the social conditions, and the religion of the Empire. In the last lecture, the relation of Christianity to the State was briefly traced from the reign of Nero to that of Constantine. In the second week, the Rev. R. G. Parsons, Rector of Birch, Manchester, lectured on "The Epistle to the Romans," commenting in detail on the more weighty Greek words and on the crucial points of doctrine. The final course of lectures was given by the Rev. Dr. Relton, King's College, London, on "The Doctrine of Freewill in the Bible and Christian Theology." Besides the courses, there were three single lectures: "The Origins of Christianity," by the Rev. R. H. Lightfoot, of Lincoln College, Oxford; "The Archaeology of Genesis," by the Rev. Dr. Buchanan Gray; and "The Historical Character of St. John's Gospel," by the Rev. Dr. Nolloth. Hebrew readings on Genesis, Greek readings on the Epistle to the Romans, discussion groups among the students, and conversation classes with the lecturers completed the activities of a delightful fortnight. The students were people of many occupations—head and assistant mistresses of secondary schools, deaconesses, sisters, missionaries, lecturers, writers, women engaged in social, philanthropic, and evangelistic work, as well as those whose work lies in their own homes; and they came from many different countries.

ROYAL VICTORIA HALL.—The arrangements for the season 1920-1921 at the "Old Vic," the home of Shakespeare and opera in English, in Waterloo Road, S.E.1, are now available. The theatre reopens at 7.30 on Saturday, September 18, with "The Winter's Tale," and the first opera will be Gounod's "Faust," at 7.30 on Thursday, September 30. A strong company of Shakespeare players has been gathered together, including several "Old Vic" favourites: among them, Florence Saunders, Mary Sumner, Ernest Milton, Andrew Leigh, and Wilfrid Walter, who is again designing the scenery. The clever actor, Robert Atkins, is returning as producer. There is every reason to believe that the high standard of the "Old Vic" operas will be well maintained. Over and beyond the ever popular works here, it is proposed to give "Tristan and Isolde." Charles Corri will conduct the operas, and be musical director again for the plays. The Carnegie Trust has granted £1,500 to the "Old Vic" theatre towards the £5,000 required for the purchase of a wardrobe of its own. The theatre has been hampered by the increasing charges of stage costumiers, and the acquisition of its own wardrobe will enable it to continue an adequate production of Shakespeare and the great masterpieces of opera in English as heretofore. No doubt those of our readers who realize how much the "Old Vic" has done towards influencing the taste of the people will be glad of an opportunity to augment the wardrobe by the gift of any fancy costumes, Court trains, and velvets or tapestries suitable for stage purposes that they may possess.

St. Anne's Institute, Island Street, Nottingham.

July 20. Mr. Ernest Mathews took the chair. The Secretary read the report, which expressed the regret of the Board at the death of Dr. C. H. Lloyd, a member and for many years an Examiner of the Board. The number of candidates in the United Kingdom was 5,409 in the Local Centre Examinations, and 35,699 in the School Examinations. Exhibitions were awarded last year in the United Kingdom to Muriel M. Hart, London Centre, Viola; Betty M. Humby, London Centre, Piano; Nina Joel, Brighton Centre, Violin; Joan Lloyd, London Centre, Piano; Christina G. Macdonald, Swansea Centre, Singing; Mary C. M. Nono, London Centre, Piano. In Australia: Eileen Cody, Melbourne Centre, Piano; Dorothy Randall, Melbourne Centre, Piano. In Canada: Ben Loban, Winnipeg Centre, Violin. In Ceylon: Kathleen M. Wright, Piano. In the combined Gibraltar and Malta Centres: Jennie Ross, Malta Centre, Piano. In New Zealand: Thelma Gallagher, Auckland Centre, Piano. Eight Exhibitions previously gained have been renewed for a further period of one year.

COMPETITION FOR BOY MECHANICS (R.A.F.).—The Air Ministry announce that, under a new scheme which has been established for training boy mechanics in the Royal Air Force, an open competitive examination for candidates for entry in January, 1921, will be held by the Civil Service Commissioners on November 1 in London and a number of provincial centres. The examination will include mathematics, experimental science, English composition, and a general paper. There will be a minimum of 300 vacancies. Candidates must be the sons of British born parents, and must be between the ages of fifteen and sixteen and a-half years on January 1, 1921. A list of candidates for appointment by open competition is kept at the office of the Civil Service Commissioners, and the necessary entry forms can be obtained on application to the Secretary, Civil Service Commission, Burlington House, London, W.1. The last day on which applications can be accepted is September 9. Boy mechanics, Royal Air Force, are attested for twelve years' service from date of entry, made up by ten years' regular Air Force service and two years in the Reserve. They receive three years' preliminary training in one of the skilled Air Force trades. Throughout the three years' training eight hours a week are devoted to an educational course. Special attention is given also to boys' physical development, nine hours a week being

allotted to drill, physical training, and organized games. Every candidate for entry should be in good health and of sound constitution, and it is desirable that, before a boy comes forward as a candidate for entry, steps should be taken to ascertain whether he is suffering from any physical disability which might prevent his acceptance on medical grounds. Boy mechanics will be provided with a free outfit, will be lodged and victualled free of cost, and will receive pay at the rate of 1s. 6d. a day until the age of eighteen, when the rate becomes 3s. a day. A pamphlet, giving further particulars of the course of training, conditions of service, and systems of entry has been prepared. Application for copies should be made to the Inspector of Recruiting, Royal Air Force, 4 Henrietta Street, Covent Garden, W.C.2.

NEW QUALIFICATIONS FOR GEOGRAPHY TEACHERS.—The development of modern geography and the demand for teachers trained in its methods have led to a marked improvement in the position of the subject in the curricula of most of the universities and university colleges of this country. In the University of London, geography has long been a subject for the Pass B.A. degree, and now there is an Honours B.A. degree in geography, both for internal and external students. There is also a diploma in geography, rather narrower in its scope than the Honours degree, but, within its limits, equal in standard. Moreover, entry to this diploma was formerly limited to matriculated students, but has now been opened to any teachers who are eligible for registration or provisional registration by the Teachers Registration Council. Finally, graduates who have passed suitable examinations in the subject can work for the new Ph.D. degree by research in geography. Further information regarding these examinations and particulars of the courses provided in preparation for them can be obtained on application to the Secretary, Birkbeck College, E.C.4.

ANGLO-BELGIAN UNION.—THE Anglo-Belgian Union is continuing its work of maintaining the friendship between Great Britain and Belgium, and of interesting the public of both countries in each other's life and history. The Brussels and London sections have simultaneously published lists of lectures which may be given in Belgium on British subjects and in the

For Secondary Schools, Colleges, and Electrical Engineering Classes.

"These are admirable little textbooks and are admirably suited for schools."—*Scottish Educational News*.

HOBBS' ARITHMETIC OF ELECTRICAL MEASUREMENTS. Revised by A. RISDON PALMER, B.Sc., B.A. Crown 8vo, with Diagrams. 2s. net.

Brief explanation; supplementary to the teacher's work; provides numerous well-selected examples for the student to work.

MAGNETIC MEASUREMENTS AND EXPERIMENTS. By A. RISDON PALMER, B.Sc., B.A., Head of the Matriculation Dept., The Polytechnic, W. Crown 8vo, 128 pp. 26 Diagrams. With Answers. 2s. net.

Each chapter contains a set of experiments, arranged to reduce a duplication of apparatus as far as possible (or graphical questions), a short account of the theory to supplement the class lesson, some fully worked examples, and a set of carefully graduated exercises for the student to work.

"This splendid little book."—*Electricity*.

ELECTRICAL EXPERIMENTS. By the same author. Crown 8vo, many Diagrams. 2s. net.

A course in Experimental Electricity for one or two years. Details are given as to Apparatus and the method of procedure, and the setting out of results.

"The treatment is very practical."—*Electricity*.

THOMAS MURBY & CO., 1 Fleet Lane, Ludgate Circus, E.C.4.

Publications of W. HEFFER & SONS, LTD., CAMBRIDGE.

NEARLY READY.

NOTES ON GEOLOGICAL MAP READING.

By **ALFRED HARKER, LL.D., F.R.S., F.G.S.**, Fellow of St. John's College and Reader in Petrology in the University of Cambridge. Demy 8vo, with 40 Illustrations. Sewed. Price **3s. 6d.** net.

The object of these notes is to teach the student to visualize a geological map as in three dimensions, and to show him that the questions which present themselves to the field-geologist reduce to exercises in very elementary geometry. This simplicity is gained by reckoning all slopes and dips as gradients, which enables one to dispense alike with trigonometry and with the protractor. The amount of dip, the thickness of a formation, the throw of a fault, &c., are thus measured directly upon a contoured geological map by the use of the scale alone.

AN INTRODUCTION to STRING FIGURES A new Amusement for Everybody.

By **W. W. ROUSE BALL, M.A.** Fcap. 8vo, boards, Illustrations. Probable Price **2s.** net.

The making of String Figures is a game common among primitive people. Its study by men of science is a recent development, their researches have, however, already justified its description as a hobby fascinating to most people and readily mastered. Mr. Rouse Ball's booklet contains the substance of a lecture which he gave on the subject and its history, followed by full directions of how to construct some easy typical designs, and accompanied, for those who wish to go further, by lists of additional patterns and references. The only expense involved is the acquisition of a piece of good string some seven feet long. With that and this work to aid him the reader will find at his command an amusement that will while away many a vacant hour.

JUST PUBLISHED.

HISTORY BY THE "PLAY WAY" METHOD.

SCENES FROM THE LIFE OF LONG AGO.

Dealing with the early period of British History from the Bronze Age to the Norman Conquest. Five short historical plays for the use of Senior Forms in Schools.

London: SIMPKIN MARSHALL & CO., LTD., and from all Booksellers.

British Isles on Belgian subjects. Copies of the list for this country may be obtained gratis from the Anglo-Belgian Union, 35 Albemarle Street, W.1. The organizers have catered for very varied tastes. Dr. Stewart is prepared to speak on religious revivals in Belgium, and on the Belgian Universities; M. Emile Cammaerts, Mme Sorgue, Mr. Gosse, and others give literary lectures; Mr. Fagg, M. Lambotte, and Mr. Spielmann undertake art subjects; while history, reconstruction, and the war are dealt with by Sir Cecil Hertslet, Prof. Lyde, Prof. Sarolea, Mr. Omond, and others. Some popular addresses have also been included which will be suitable for public lectures, or for those who contemplate a trip to Belgium. The lectures may be given in either English or French, and illustrated with lantern slides. The Union hopes especially to interest those concerned with the education of the younger generation, and its organization offers an opportunity of securing good lecturers on Belgian subjects at comparatively small cost.

LONDON SCHOOL OF DALCROZE EURHYTHMICS.—The Summer Meeting of this school was opened with sixty-three students and a children's class at Oxford on August 16. Mr. Frank Roscoe, who was introduced by the chairman of the Oxford Education Committee, gave the opening address, taking as his subject "The Fear of Ideas." During his remarks he said: "We cannot wholly divest ourselves of our preconceived opinions when encountering new ideas. But we can at least school ourselves to give the newcomer every chance of a fair hearing, sinking our prejudices as far as possible, and, above all, remembering that in choosing our attitude we are declaring whether we shall range ourselves alongside the Philistines or with the children of light. The gravest disease which the gods have inflicted on mortals is 'old fogeyism,' an ailment which afflicts the young as well as the old, depends, indeed, not on years, but on the attitude of mind. The chief characteristic of old fogeyism is the fear of ideas and an undue reverence for the past. It has been suggested that to question the statements of one's father and mother is the first commandment with promise. Certainly by the rigorous questioning of life and our surroundings we pave the way towards a higher civilization and a free exercise of human faculties."

SCIENCE

- PRACTICAL SCIENCE FOR GIRLS** as applied to Domestic Subjects. By EVELYN E. JARDINE, M.A., B.Sc. 8s.
- ELEMENTARY EXPERIMENTAL SCIENCE** (Physics and Chemistry). By W. T. CLOUGH, A.R.C.Sc., and A. E. DUNSTAN, D.Sc. 4s.
- EVERYDAY CHEMISTRY.** By W. ROBINSON, B.Sc., Officers' School of Education, Oxford. 3s. 6d.
- A JUNIOR CHEMISTRY.** By E. A. TYLER, M.A., F.C.S., Swansea Technical College. 4s.
- THE COMPLETE SCHOOL CHEMISTRY.** By F. M. OLDHAM, M.A., Dulwich College, London. 7s. 6d.
- A TEXTBOOK OF INORGANIC CHEMISTRY.** By GEORGE SENTER, D.Sc., Principal, Birkbeck College, London. 8s. 6d.
- A TEXTBOOK OF HYGIENE FOR TRAINING COLLEGES.** By MARGARET AVERY, B.Sc., M.R.San.I., Warrington Training College. 7s. 6d.
- THE THEORY OF RELATIVITY.** A Popular Exposition. By Professor ALBERT EINSTEIN. Translated by R. W. LAWSON, D.Sc. 5s. net.

SUITABLE BOOKS FOR APPLIED SCIENCES

PUBLISHED AT THE

University Tutorial Press.

Engineering Science, A First Course in. (Includes the Elements of Applied Mechanics and Heat.) By P. J. HALER, B.Sc., A.M.I.M.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. **4s.**

Adopted by the Air Board for use in the Royal Air Force. This book is intended for students who are taking a Preliminary Technical Course. It deals mainly with Applied Mechanics and Heat treated from an experimental and practical point of view. The use of expensive apparatus has been avoided.

While the first principles are fully explained and the scientific side of the subject treated as thoroughly as the object of the course would justify, the bearing of the work on Engineering Science has always been kept in view. This is of the greatest importance, for the reason that the engineering student readily takes a keen interest in anything which is obviously connected with his daily work.

Well arranged and thoroughly sound in scope and treatment. The apparatus required is so simple that all the experiments should be capable of being performed in any school. —*Electricity*.

Geometry (First Stage), Practical, Plane, and Solid.

By G. F. BURN, A.M.I.Mech.E., Head of the Mechanical Engineering Dept. at the Leeds Technical School. **Third Edition. 3s.**

A good introductory course in practical geometry. Eminently clear and lucid. The idea of utilizing photography for the more difficult conceptions is most helpful. —*Guardian*.

Written both with knowledge of the subject and with appreciation of the difficulties of beginners. The sections on Solid Geometry are very good, and the diagrams are numerous and clear. —*School World*.

Heat Engines, First Stage. By J. W. HAYWARD, M.Sc., A.M.I.Mech.E. **4s.**

In the first part of this book a particular engine and boiler are described in detail, and the theory of their action explained. Then follow an account of steam engines in general and three chapters on gas and oil engines.

The object of the book is to give a good general knowledge with a clear account of the first principles.

We can, after having thoroughly tested it, cordially recommend its use by all beginners in this subject. —*Engineering Review*.

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H., Medical Officer of Health for Hampshire and Chief Medical Officer to the County Education Committee. **Sixth Edition, Revised and Enlarged. 4s.**

A useful course for beginners in this subject, containing a short account of the elements of Human Physiology.

It has been the author's endeavour to prevent the student regarding the subject as a number of hard facts, and to invest these facts with the interest derived from an association with the circumstances of every-day life.

At the ends of those chapters where the subject-matter adapts itself to such treatment a list of simple experiments, illustrating the work covered by the chapter, has been added. These should either be performed by the student or gone through by the lecturer.

The author's plan of taking into consideration the various parts of physiology as essential introductions to certain sections of hygiene has succeeded. In addition he has preserved a logical sequence of both physiological and hygienic facts, which develops the subject in the most intelligible way. —*Lancet*.

Hygiene, Second Stage. By A. E. IKIN, B.Sc., LL.D., and R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H. **Third Edition. 5s.**

An advanced course suitable for senior classes.

The arrangement of the subject is similar to that of *First Stage Hygiene*, and, as far as possible, the different parts of the subject are taken in the same order. The list of experiments that are added at the end of many of the chapters represent only the minimum amount of this kind of work, though they will doubtless suggest further possibilities in this direction. All the experiments described can be very easily carried out by the average student.

The matter is systematically arranged, and the student is further aided in understanding the more technical parts of the text by numerous excellent diagrams. —*Lancet*.

Electricity, Technical. By Professor H. T. DAVIDGE, B.Sc., M.I.E.E., late Professor of Engineering at the Ordnance College, Woolwich, and R. W. HUTCHINSON, M.Sc., A.M.I.E.E., Principal of the Municipal Technical School, Smethwick. **Third Edition. 8s. 6d.**

The object of this book is to give the reader a thorough acquaintance with the Elements of Practical Electrical Engineering and to base his knowledge on Sound Scientific Principles.

One of the best introductions to the study of electrical engineering with which we are acquainted. —*Electricity*.

The book has been prepared in accordance with the most modern ideas as regards technical education. —*Electrical Engineer*.

Electrical Engineering, Continuous Current. By W. T. MACCALL, M.Sc., A.M.I.E.E., Head of the Department of Electrical Engineering in the Technical College, Sunderland. **15s.**

The book is intended to supply all that is required in the ordinary three years' day course in Technical Colleges, and all that is usually done in evening classes. It is very suitable for use in Advanced Group Courses under the Board of Education regulations. It fully covers the Continuous Current section of the Grade II examination in Electrical Engineering of the City and Guilds of London Institute.

The sequence of the instruction is well arranged, and the descriptions of appliances are clearly put. The chapters on Lighting and Illumination and on Second Batteries are exceptionally good, and descriptions of tests concise and to the point. —*Journal of the Society of Engineers*.

As regards the work actually covered, nothing but praise can be given. The explanations are thoroughly sound. The illustrations are numerous and well drawn. All teachers of electrical engineering classes should certainly take an early opportunity of inspecting this book. —*Technical Journal*.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

MR. WILLIAM RICE, 3 LUDGATE BROADWAY, LONDON, E.C.4;

to whom all remittances should be made payable. Orders and Cheques should be crossed, "The London Joint City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: MR. WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

PROTECTION FROM FIRE IN SCHOOLS.

By ALAN E. MUNBY, F.R.I.B.A.

FIRE! There are few more dreaded words in connexion with our homes and institutions. Most of the other catastrophes to which flesh is heir, at least within the confines of a dwelling, are sufficiently gradual in their onslaught to admit of plans for defence which usually may be developed and matured as the situation unfolds itself; but fire demands instant readiness for action. Minutes, even seconds, count heavily in such a predicament; hence complete readiness in every detail is essential. All human actions to be really successful require some incentive, and it is particularly difficult to secure the incentive in the matter of arrangements to meet fire, because outbreaks occur so seldom. Perhaps inspiration may come from some case of fire in the neighbourhood, but enthusiasm for drills and practices soon dies down, and unless these are made a matter of routine, and someone is prepared to make it his or her business to maintain interest and efficiency, when the outbreak does occur, it will probably be accompanied by disaster.

Fire has an attraction for children, particularly boys; and, moreover, nearly all children are naturally careless and heedless. In our "teens," through ignorance or mere light-heartedness, we take risks which no person of mature age would contemplate. A mischievous or malicious child is, of course, a real danger, but risks are often taken thoughtlessly by less daring subjects. The writer, who was rather lacking at school in the spirit of adventure, remembers how, at the end of term, when the terrible ordeal of some hundreds of lines of Latin and Greek "rep." had to be painfully committed to memory, he used to work with a candle among a pile of boxes in a cupboard off his dormitory, access to which he gained by an unauthorized duplicate key. In those days fireproof construction was nothing accounted of in schools;

the dormitory was on the top floor, and all the surroundings were wood.

Turning to methods of protection, no scheme which is universally applicable can be drawn up. Schools vary so much in size, construction, location, and periods of use that arrangements for one institution might be quite unsuited for another, though naturally the aims—to eject the inmates and attack the fire as rapidly as possible—are the same in all cases. The problem of a modern day school, with well-placed fireproof stairs and panic exits, may be of the simplest, but that of a boarding school, which has grown by spasmodic additions to an ordinary domestic house—and there are many such—may require much thought for its adequate solution. Fire problems should be treated like preparation for defence or counter-attack in war. It is said of one of our generals in the late war that, when asked for his proposals in the event of attack, he replied that he had developed eighteen schemes to meet the enemy's possible variations in procedure. So with a fire, schemes should be developed for meeting outbreak in different places and circumstances. The general aim should always be to provide at least two means of escape from any point, so that, if one is cut off by fire, the other will be available. It is naturally at night that fires are mostly to be feared, as valuable time is then often lost before the outbreak is discovered, and, suddenly aroused from sleep, time is required before one's mentality can grasp the situation. In large institutions a night watchman may be employed, and, if this service is decided on, two or more recording clocks, on which he has to register his rounds, should always be employed, and the records examined to ensure that he carries out his duties. Few schools, however, would feel justified in paying for such services, but it should at least be the duty of some person to pay a final visit to all empty rooms, more especially those recently in occupation by the pupils or servants, before every-one retires to bed.

Where a new building is in question, of course, much can be done to minimize risks by suitable construction. This is a matter for the architect, who is usually quite alive to the desirability of avoiding wooden floors and partitions when incombustible materials are approved. This is often a matter of cost. The increased outlay may not be large in a building of magnitude near an industrial centre, but is often considerable as a proportion of the outlay in country districts, and, when an existing building contains much timber, additions in fire-proof materials are often thought useless, though the writer does not hold this view. A good deal of joinery, again, may be avoided in these days, windows and even doors (the latter of thin sheet, with an incombustible filling) may be of steel, and their linings in plaster. Similarly, lockers may be built in angle irons with steel doors, but, in spite of every constructional effort in this direction, there must necessarily be always a large amount of combustible material, such as bedding, clothing, and books, which can never be dispensed with. Thus, while construction may confine and reduce a fire, and mean great saving in actual damage and reduced premiums, it does not obviate the necessity for the provision of proper means for escape and fire extinction. Walls continued vertically right through a building can do much to prevent fire from spreading, particularly if doors in such walls are made fire-resisting. These are generally of oak or teak, and two inches (ordinary door thickness) throughout, that is, the panels are not recessed. They should be self-closing, and if glazed, as sometimes necessary, the glass should be in small squares, set in copper, and fixed by electrolytic deposit of copper on the bars. Such doors will withstand a fire for a considerable time. It is a question whether deal doors, thoroughly impregnated with such a compound, for example, as ammonium phosphate, would not be nearly as effective, at much less cost, and experiments in this direction seem very desirable. Windows of rooms in occupation should not have iron bars, and, if conditions of discipline suggest these, some other mode of meeting this requirement must be found, as escape from

windows should always be possible as a last resort, and entrance may be urgently required through them by firemen. Sufficient doors clearly marked "fire exit" should be arranged to open out, and be supplied with panic bolts, which automatically release the doors on pressure from within.

In storied buildings no better provision exists for escape than an iron staircase, which should be placed with regard to other stairs, and preferably supported on stanchions not close to windows, or, if this is difficult, such windows should have wired plate glass. These staircases are expensive, and though they naturally vary much in character with the building and its surroundings, at the present time probably £80 per story would represent a fair average cost. Iron ladders, with flat treads, or even round bar treads, may be substituted for economy, but admit of much less rapid use and present more chance of accident in panic. Whatever is used, flights must be broken up by frequent landings for safety. If the expense of escape stairs makes them prohibitive, the next best thing is a canvas chute, which must be provided with a proper fixing at some selected window, and when required is thrown down to the ground. The first person using the chute draws it away from the building after descending, so that others terminate their descent in an almost horizontal position. There is no difficulty in using a chute, but practice is necessary to give confidence, and, if desired, a fluffy rope can be placed in the chute, which the user can allow to slip through his hands, and thus check his speed independently of the use of knees and elbows. Rope ladders are not to be recommended; even those with rigid treads swing away from the wall in use, and are not things to give confidence.

As to extinguishing fires, even when the services of a brigade are immediately available some movable hand apparatus is most desirable, and when assistance may be delayed this is absolutely essential. Nothing is better than one of the London Fire Brigade hand pumps, which consists of a cylindrical tank some 2ft. 6in. high and 18in. in diameter on wheels, with a hand pump and jet on a flexible pipe fixed in the tank, into which water is poured by hand or from a tap, as it is used up by the pump. A powerful jet can be directed to the seat of the conflagration by such a pump, and force is as important as the actual water, as fire submits to being knocked out as well as smothered.

If chemical extinction apparatus is used, this must be examined and recharged periodically. Messrs. Merryweather make a conical cylinder of this type which comes into action without taps when stood on its head, and stops when again inverted. At the start of a fire in combustible surroundings every second tells, and a number of ordinary syphons of soda water disposed for use about a building would often be a most valuable initial aid in an outbreak. The mouths might be closed by wafers to exclude dust and prevent unauthorized use without detection.

Where no public hydrant service is available, of course, larger measures to cope with fire must be taken. Large chemical engines made of copper, supported on a carriage, and costing up to £300, are sometimes used for country mansions, but a continuous water supply is better. London hydraulic mains give a pressure of 700 lb. per square inch, and most large towns have a hydraulic service from which a separate system of hydrant pipes can be installed in a building with appropriate hose lengths on various floors. If an ordinary domestic supply is alone available the pressure must usually be increased by the use of a manual engine acting in a manner similar to that of the hand pump already referred to. Such an engine can be used merely by pond or well water with a suction pipe, provided that the water has not to be raised to the pump more than about 24 ft., but greater heights can be dealt with by a force pump. With such methods the suction hose must have the most careful attention, as any leakage in it will be fatal to the pump supply.

Where electricity is available the place of the manual engine may be taken by a pump and motor designed to draw water,

and discharge it under increased pressure. These pumps have now been brought to great perfection, and are stated to be available in the most powerful sizes for discharging a $\frac{1}{4}$ -in. jet no less than 200 ft. high.

Hoses full of water are heavy things, and are apt to get twisted and damaged. It is a great gain, therefore, to have two or three iron pipes erected on the outside walls of a building, with suitable couplings at each story near some opening, and one at the open mouth well above the ground at the bottom, to which the delivery from the manual or motor pump can be attached.

No arrangement, however perfect, will be effective without an organized plan, in which the duties of various persons are defined and co-ordinated. Further, alarms should be made at frequent intervals both in the day and at night. In most schools a school brigade is desirable, and this should drill regularly, and be under the inspection and report of some professional unconnected with the institution. The first lessons will consist of explaining the use of various implements, next will come the study of the engine, hydrants, and escapes, life saving under various conditions, and, finally, the actual responsibility of management of fires. In brigade work the first officer places the engine and directs operations, the second usually has charge of the hose lengths, the third controls work on the engine and arranges relays of pumpers, while the rank and file lay out the hose, protect it and the suction pipe, clear away obstructions, and obey other orders. Branchmen—the fire fighters—require good nerves and rapid powers of decision, and must be able to get above the fire and direct the hose down upon it.

Pages might be written upon procedure in various hypothetical cases, but these are matters for individual study. A fire, for instance, at the far end of the long roof dormitory will present problems quite different from an outbreak in the boys' studies probably. Finally, interest must be sustained, and this might be done by introducing the subject into school work, allowing the school brigade some privileges, and giving a substantial prize for an annual essay on procedure in some prescribed conditions. Few of us, again, are uninfluenced by display, brass helmets and uniforms are attractive, and any rare chance of organizing a real fire in some neighbouring building marked out for demolition should not be lost sight of.

THE STUDY OF THE LIVING PLANT.

By R. F. SHOVE,
The University, Leeds.

IN the days when the heuristic method had not yet made its appearance in connexion with the teaching of physics and chemistry in secondary schools, the teaching of botany was modelled, consciously or unconsciously, along lines which appealed only to the adult mind. The schemes of work for that period, and the syllabuses set in examinations, indicate a study of general topics too often entirely divorced from reality. Shapes of leaves, types of inflorescence, classification of fruits, entered into even the most elementary schemes, and these were frequently studied almost entirely from textbooks. The older pupils absorbed information about the internal structure of plants and the physiological processes carried on in the living plant without seeing a section or performing an experiment. The schemes of work in botany drawn up by Prof. Balfour for the schools of the Girls' Public Day School Company in 1887 show the subject-matter studied at that time. The older pupils were taught "the elementary morphology and physiology of plants" by means of the types *helianthus*, *aspidium*, *funaria*, *vaucheria*, *mucor*, and by observation of plants belonging to certain specified natural orders. The study of these types by girls of fifteen to sixteen in classes of considerable size was highly unscientific; the knowledge of

microscopic detail was obtained from textbooks, and the living plant was often only most cursorily examined by the pupils. Further, the knowledge obtained was not such as to make the plant world around them more interesting, and continued study along similar lines held little attraction for the majority of the girls. The elementary schedule set for the guidance of the work of the younger pupils consisted of a list of plants of which "the naked eye characters, relationships, and uses of parts" were to be studied. This list included many plants of which the life histories could be used to good effect in demonstrating biological principles, but there was little in the accompanying statements to suggest to teachers of the period that such a method should be followed, and, as a general rule, the study was almost exclusively along morphological lines.

To-day very different ideals prevail; knowledge of form and structure is regarded as the foundation, and not the coping-stone, of botanical study, and even the elementary student is given some grasp of biological principles. Seasonal changes in plants, experimental investigation of living processes, relations between form, function, and environment—all of these stimulate the mind to satisfying thought. Shapes of leaves neither satisfy nor stimulate. Yet even now all is not well. Plants are regarded as alive, but frequently only during one phase of their existence; the other phases are ignored. This is due to the fact that only in some cases are all the parts of one and the same species suitable for study by the young mind: hence certain parts of certain plants have become almost universally adopted for the study of typical structures. This practice partly results from the systematizing tendency characteristic of the adult mind, so that even young children are not left free to observe the plant as a whole. The seeds of the bean, sunflower, acorn; the fruits of the sycamore, poppy, apple; the flowers of the buttercup, primrose, fox-glove, may be instanced as examples of this partial treatment of plants. More often than not, no other phase of the plant's life is studied, and the child gains no clear idea of its life-history as season changes into season. Many broad beans have been dissected and germinated in school, but how many children have seen the seedling grow to maturity—watched the development of the flower and fruit, and found the ripe beans in the pod? Many poppy fruits have been drawn and described, but have our pupils seen the production of the multitudinous seedlings from a thimbleful of seed and the wonder and beauty of the developing poppy-flower? No clear concept of plants as living wholes can be obtained without the study of their life-history—of the development of individual plants from one stage to another, and of the seasonal changes which take place as the year passes by. Such work is peculiarly suited to the pupils of the lower and middle classes of secondary schools, but can only be carried out with complete success when a school garden is available; the intimate contact with the needs of the living plant that can then be obtained, the tending of it through all the phases of its existence, and the means taken to ensure its welfare, all illustrate the biological principles a knowledge of which is to be instilled.

Various considerations influence the choice of plants to be studied in this way, and of these the most important are the following:—(1) The plants as a whole and parts of them should be readily obtainable when required; (2) the various parts should be sufficiently large to be examined and described easily (the use of a hand lens is not desirable, except with older pupils); (3) the fruit should, in ordinary circumstances, be successfully produced from the flower and should show well formed seeds; (4) the seeds should readily germinate, both under experimental conditions and in the garden; (5) the methods of pollination should be of particular interest; (6) the plant should show some striking adaptation of form to function in such matters as seed dispersal, food storage, perennation, leaf arrangement; (7) some of the plants should show well marked adaptation to environment.

It is obvious that few plants combine all these characters, but many show a sufficient number to be suitable as objects of study. The first-named features are those which should carry most weight in choosing plants for younger children, and

for these the plants chosen should possess in addition enough beauty of form and colour to be attractive to young minds.

The following three years' course is suitable for children of twelve to fourteen. The types are chosen so as to render possible simple generalizations about plant life at the end of each year.

Age 12+. *Types.*—Annuals: sweet pea, candytuft, nasturtium, poppy, broad bean.

Herbaceous Perennials: lupin, bluebell, buttercup, wall-flower, carrot, dandelion, primrose, onion, iris.

Woody Perennials: oak, sycamore, ash, horse-chestnut.

At the end of the year the pupils should have realized the difference between annual plants, herbaceous and woody perennials; the relation between flowers, fruits, and seeds; the chief methods of germination and of food storage.

Age 13+. *Types.*—Annuals: shepherd's purse, goose-grass, groundsel, maize, sunflower, convolvulus, vetch.

Herbaceous Perennials: crocus, potato, celandine, stonecrop, houseleek, antirrhinum, blackberry, Solomon's seal.

Woody Perennials: lime, beech, elm, gorse, clematis, rose, honeysuckle.

These types are chosen to illustrate methods of perennation, of reproduction other than by seed, and of pollination, and the relation between the plant and its environment as seen in drought-loving and climbing plants.

Age 14+. *Types.*—Annuals: willow-herb, cornflower, foxglove, pansy, balsam.

Herbaceous Perennials: avens, geranium, montbretia, chervil, plantain, saxifrage, grasses (wheat, oat, couch, rye-grass).

Woody Perennials: birch, hazel, willow, poplar.

By the study of these more difficult types the child's understanding of the foregoing principles is made both deeper and wider, and special emphasis is laid on the biological equipment of the plant and its intimate relation to its environment. Throughout the whole course every type is studied in the garden and in the laboratory, both during its resting stage and during its period of vegetative activity.

While dealing with the life history of these plant problems with regard to life processes arise in the child's mind, and experimental work of a simple nature must be carried out in order to solve these. They arise as soon as the plant is studied in relation to its environment, and as soon as attention is drawn to such gardening operations as watering, hoeing, digging, and the thinning out of seedlings. For example, the need for water leads on to the consideration of its use in the plant and to the discovery of transpiration. The obvious gain in weight of plants grown from seed arouses inquiry as to the source of food, and the arrangement of leaves in mosaics to the reason for the plant's need for light.

The following notes indicate a method of treatment which could be followed in a study of the life-history of the carrot; the examination of large carrots available in shops in winter serves as the starting-point, but the study could equally well begin with the seeds in the spring.

SECTION I.—*January or February: External Form and Structure of Carrot Root.*

The carrot has a root very different from that of many plants. How? [Thick, swollen main root; few small fibres.] Plant must have a purpose in this; we shall find out as we study its life-history. Description of form of carrot by pupils [shape, colour, surface, fibres]. Small horizontal lines on sides. Why? [Fibres or branch roots.] Why are these so short? [Carrot pulled up; roots torn.] Can we make others grow? [Carrot planted in damp fibre.] Drawing of plant by pupils. Carrots are cut longitudinally; description of interior [core, rind, greenish stem, leaves, strips of core running out to exterior]. What are these strips? [Branch roots; carrots are cut transversely through horizontal lines on surface to determine this.] Why do the branch roots join the core? [Water thus sent to leaves.] Drawings of longitudinal and transverse sections.

SECTION II.—*A few weeks later. Function of Carrot Root.*

Carrots planted in fibre now have branch roots and leaves. What has been needed for this growth? [Warmth, water, food.] Source of food? [Fibre, water, or root.] Slices of varying thickness of the

top end of carrot roots are placed in distilled water to determine if food is present in the root; amount of growth is noted. The carrot root, if not pulled up for our food, would be in the ground now. What may happen in the summer? [New leaves, flowers, fruits, seeds.] Carrots are planted in the garden in order to watch this possible development. What does the gardener do to obtain carrot plants? [Sows seed.] What are these like? Probably no child will know; therefore "seeds" are examined, described, drawn, and sown in the garden in late March or April.

SECTION III.—*Early Summer. The Young Plant.*

As the seeds germinate the seedlings are examined at different stages, and hypotheses as to the work of the cotyledons, foliage leaves, and root formulated by the class; experiments with more suitable plants must be performed to determine whether these hypotheses are correct; the development of the plant is watched up to its resting stage, reached in the autumn.

SECTION IV.—*Flower and Fruit.*

During the summer the carrot roots planted in the spring send up tall flowering shoots. How is this possible? [Food store in root.] Observation and description of flower structure, method of pollination, and nature of fruit. What did we really sow in the spring? [Seed cases, and not seeds.] Why bristly? [Seed dispersal; comparison is made with fruits of wild carrot.] What will now happen to the plant? [Two hypotheses: (1) plant dies; (2) leaves make more food, and store in root for next year.] Correct hypothesis is determined by continued observation; a plant which thus lives only for two years is known as a biennial. Why did it not flower at the end of its first year? [Production of so many flowers and fruits needed much food; time available during one summer's period of growth permitted only of the development of foliage leaves, which then made and stored food in the root for the great effort of the succeeding year.]

If the life-histories of about twenty plants are thus carefully studied every year, a three years' course will not only give the pupils a real and satisfying knowledge of biological principles, but will also train those mental qualities which are needed for any critical investigation, and which stand their owner in good stead whatever the nature of the problem to be attacked.

CORRESPONDENCE.

DATE OF NOTIFICATION OF VACANT HEADSHIPS.

To the Editors of The Journal of Education and School World.

SIRS,—May we be allowed through your columns to draw attention to a matter of great importance to the conduct of girls' secondary schools at this time, that is, the inconvenience which is caused by the late date at which notification of vacant headships is published and selection of candidates for these posts is made. Grave interruption is caused to the school work by the appointment of a prominent member of a school staff to the headship of another school at short notice. In many cases, indeed, assistant mistresses who are eminently fitted for headships are reluctant to apply for such posts when they are aware of the disorganization which must necessarily be caused to the work of their pupils by their sudden withdrawal from school, perhaps shortly before the date of the examination, on the result of which the future of several of the girls to a great extent depends.

The matter appears to touch girls' rather than boys' schools at the present time, when so many new secondary schools for girls are being opened. An early notification of vacancies (which are seldom of sudden occurrence) and some readjustment of the machinery for interviewing selected candidates would probably remove entirely a grievance which closely concerns, not only head and assistant mistresses, but also the pupils in girls' secondary schools.—We are, yours faithfully,

E. H. MAJOR,

President, Association of Head Mistresses.

DOROTHY SHOVE,

President, Association of Assistant Mistresses.

92 Victoria Street, S.W.1.

August 3, 1920.

FOREIGN AND DOMINION NOTES.

FRANCE.

It will not be thought unnatural that an experienced educational journal should view the catchwords of a day, such as "self-determination" and "democracy," with some suspicion. There are modes and measures of self-determination which are impossible for the individual citizen, the trade union, the single State—for the elements of any organism. So again, to-day we are all democrats; not conscious, all of us, that there are two forms of democracy competing for favour. One is democracy as advocated among us by the Boanerges of the Cross Roads: "five hundred a year all round," no competition in production, no stimulus to energy, no overtime, holiday-making paid for as labour, and so forth. The other is the democracy that seeks to abolish all privilege and to equalize opportunities, to increase the wealth of the community by increasing production, to increase production, above all, by selecting and training fitly the human instruments of production without regard to social class, and to develop every child at once for the service of the State and to the highest attainable manhood. In short, there is the democrat whose ideal it is to lie on his back, and there is the democrat who still would climb. If we discern aright, France is inclining to the more energetic form of democracy. Her race being not so prolific as the German or the Anglo-Saxon, she must make good by quality the lack of quantity. She must train *élites*. Accordingly in education she will uphold the principles of competition and selection. The Minister of Education has promised to re-establish the Concours général of *lycées* and *collèges*. In the schoolroom the teaching will no longer be kept down to the level of the dullest pupils. The teacher with no diplomas will not be the equal of the teacher provided with them. From the primary school will be picked for secondary or technical schools the *fine fleur* of French intelligence. A million francs used to be appropriated for *bourses*, or scholarships, enabling the pupils of the primary school to continue their studies, a sum which allowed 426 *bourses* to be bestowed; the new Budget allots six million francs, to provide nearly 3,000 *bourses*. "Qu'est-ce qu'une saine démocratie!" exclaims a writer, commenting on the fact; "c'est une aristocratie qui se recrute par l'esprit!" Yet in France, too, stagnant democracy has its adherents, with whom the chief use of the intellect is to reckon wages.

But the most difficult, the basic, problem that France has to solve is how to get the children into the school, and *L'Ecole et la Vie* devotes a special number (iii, 43) to it. Under Napoleon the Third, Victor Duruy and Jean Macé made valiant efforts for national education. The Third Republic has passed important laws to further it: the Law of June 16, 1881, establishing the principle of free education in State primary schools; the Law of March 28, 1882, relating to compulsory attendance and the secularization of the primary school; and the Law of October 30, 1886, on the organization of primary education. The joint effect of these laws was to give France free, obligatory, and secular primary education. But the *commissions municipales* instituted by the Law of 1882 proved to be insufficient; the obligation to attend school was not respected; and Congress after Congress called for new legislation, Bill after Bill was drafted, to improve attendance. A large number of French children have been escaping the net. The annual examination of conscripts, made (under the Ferdinand Buisson Law) for the first time in 1912, showed that, of 237,865 recruits, 50,800 had to follow the courses of the regimental school as being insufficiently educated, 8,305 could neither read nor write, and 4,059 could read only. New statistics have not been published since the war; when they are issued they will certainly reveal increased weakness. Poverty and selfishness are the prominent causes of bad attendance—the poor parent needing, the greedy parent claiming, the services of the child in domestic offices. For remedies, France looks to the Legislature. *L'Ecole et la Vie* is promoting a national petition to the Chamber of Deputies, calling for a law to secure effectively attendance at the school. And already it is announced that M. Honnorat, Minister of Public Instruction, is preparing a Bill which, whilst raising the school age to fourteen, will make obligatory attendance a reality. Unhappily, as we know in England, it is one thing to put an Act on the Statute-book, another to reap the benefits which the Act is supposed to provide.

Whilst in England the Board of Education can only shake a puzzled head over the problems of continuation, France is making, locally and sporadically, some little progress in caring for the adolescent. The *cours de perfectionnement* for them indicated in the Circular of

May 27, 1918, are being organized in several departments. In Doubs, for example, five such courses have been conducted at Besançon since the month of December. They are held every Saturday afternoon from 3.30 to 6.30. Primary teachers are, in general, the instructors of the young folk, whilst professors of the *école normale* lecture from time to time on such subjects as Literature and Social Education, the Sciences as applied to Hygiene, and Commercial Arithmetic. Further particulars of *cours de perfectionnement* will be found in the *Revue Pédagogique* (LXXVII, 7, 66). Inadequate as such efforts are, they indicate goodwill.

GERMANY.

The vital importance of primary education continues to be emphasized in Germany. The principle of training the primary teacher at a university, in spite of some opposition in academic circles, gains ground, and practical application of it continues locally. The Governments concerned with the University of Jena have resolved, with the consent of the Senate, to admit *Volksschullehrer* as regular students in all Faculties, if they hold the leaving certificate of a nine-class secondary school or satisfy prescribed tests. At Giessen the *Volksschullehrer* are being accepted in the Faculty of Philosophy if they have passed the first and the second *Lehrerprüfung*, or Training College Examination. Imperial recognition of the right of the primary teacher to university education can hardly be long withheld.

The Committee of the *Reichsschulkonferenz* (of which we wrote last month) that dealt with school organization was disposed to allow wide scope to experiment. It proposed that there should be established, side by side with the existing nine-year higher schools and having equal rank, a *deutsche Oberschule*, or German high school. Such a school would offer no Greek, and Latin only as an optional subject in the three or four higher classes; the staple of instruction would be German (the German language and literature, German history and German culture), one foreign language being studied intensively for informative contrast. This "German School" is not to spring into being in a moment. It is recommended that the plan should be elaborated in experimental establishments conducted by well qualified teachers, with free play for individual initiative. When the scheme is developed, the classical Gymnasium will have a formidable rival. Experiments are also contemplated with looser groups than the old-fashioned classes.

The Prussian Minister of Education has issued a note advising more instruction in the open air. For geology, for *Heimatkunde*, to give elementary notions of form and space, the field and the forest are the best classrooms. And other teaching is also quickened when it can be done *sub Jove*.

It is stated in the newspapers that Mr. Eugene Higgins, an American who lives in Paris, has offered a prize of £1,000 for the best explanation of Einstein's Relativity Theory. English teachers who may wish to compete will find an article on the subject, by Prof. A. Kopff, of Heidelberg, in the *Wissenschaftliche Beilage* of the *Leipziger Lehrerzeitung*, No. 6, June 1920. Recommended for the study of the theory are the following books:—A. Einstein, "Über die spezielle und die allgemeine Relativitätstheorie," Sammlung Vieweg, Heft 38; M. Schlick, "Raum und Zeit in der gegenwärtigen Physik," J. Springer, Berlin; E. Freundlich, "Die Grundlagen der Einsteinschen Gravitationstheorie," J. Springer, Berlin; E. Cohn, "Physikalisches über Raum und Zeit," Teubner; W. Bloch, "Einführung in die Relativitätstheorie," *Aus Natur und Geisteswelt*, Bd. 618; H. Witte, "Raum und Zeit im Lichte der neueren Physik," Sammlung Vieweg, Heft 17. The judgment of Prof. Kopff is that the conclusions deduced from the theory still need manifold explanation; that whilst there are no valid reasons for rejecting it, we are not at present compelled to accept it, "wenn auch die Einfachheit und Geschlossenheit des sich uns darbietenden physikalischen Weltbildes von vornherein für sie spricht." In other words, it is plausible, probable, but not absolutely demonstrated.

UNITED STATES.

Plato, in the "Republic," viciously separated the time of bodily training from the time of literary education. Johns Hopkins University properly combines the two. Not only is a course in physical exercises required of all undergraduate students during the first two years of

residence, but, to provide trained men as officers in case of war, the University has established an Infantry Unit of the Reserve Officers' Training Corps, Senior Division (*University Circular*, 1920). The military courses, covering four years, rank equally with other courses, and a student who completes them satisfactorily receives a credit of seventeen points towards the degree of Bachelor of Arts. There is instruction in the duties of a soldier for Freshmen, military topography for Sophomores, military field engineering for the Junior class, followed by military and international law and small infantry problems for the Senior class. Simultaneously with this instruction, the student progresses in the handling of troops, beginning with squad leadership and advancing to platoon, company, and regimental drill; until, in the Senior year, he is ready to undertake the War Game, in which his ability to manoeuvre all arms of the service is tested on large relief maps. Discipline and methods of instruction resemble those of the United States Military Academy at West Point. Novel to us, and most interesting in the matter, is the fact that the training helps to an Arts degree.

INDIA.

The Bureau of Education, India, publishes a comprehensive "Report on Education in 1918-19," a year in which a widespread failure of crops was joined with the paralyzing effects of war and great mortality from disease. In spite of these adverse influences, there was only a small decrease (11,491) in the number of pupils in the schools, and that was in private schools, public schools showing an increase. Colleges and secondary schools had an improved attendance. The number of public educational institutions rose by 2,820; and expenditure, augmented by 116½ lakhs, stood at the unprecedented figure of 129,863,073 rupees. But the percentage of the population under instruction was still small—3·25 per cent. Nor is the provision of educational opportunities all that India needs. "The progress of male vernacular education depends on compulsion and a clearer realization on the part of local bodies of their responsibilities, combined with more systematic consideration of how this responsibility may be discharged. Female education depends on the growth of a demand that does not exist at present." Yet the number of girl pupils increased hopefully in 1918-19. Satisfactory, too, was the increased proportion of Indians employed in the Educational Service. Improvement in the payment of teachers is reported.

In higher education the chief event of the year was the conclusion of the labours of the Calcutta University Commission, from which great results are expected. One of their principal recommendations, the transfer of intermediate classes to the school system, was carried out during the year at the Patna College. Again, the Report indicates "that the universities are alive to the necessity of assisting in the commercial and industrial revival which is taking place. In the University of Madras, classes were opened for a diploma in Economics, and are attended by whole-time and part-time students. The Punjab University is moving in the same direction, and the Senate has accepted a scheme for a diploma of Commerce with a two years' course. The Universities of Bombay and Allahabad already have degrees or diplomas of this nature: the former university is founding a School of Economics and Sociology, and has secured therefore the services of Prof. Patrick Geddes; and the University of Calcutta has framed a plan which is now being considered in the light of the Commission's report. The Benares Hindu University is opening a College of Mechanical and Electrical Engineering." The schemes for the creation of new universities at Rangoon and Nagpur are being completed, and sites have been acquired for their buildings. An interesting experiment was made in the temporary employment of ladies as professors in colleges for Indian youths—a war measure that proved successful.

Acts permitting the introduction of compulsory primary education in local areas have now been passed in Bombay, Bengal, the United Provinces, the Punjab, and Bihar and Orissa. As a general principle, the adoption of compulsion is left to the local bodies. The age-limit of compulsion is ten or eleven. In all cases provision is made for the exemption of particular classes or communities from the operation of the Acts. Our impression is that India is growing ripe for more drastic measures of compulsion than those exhibited in the Report before us.

Captain Petavel has elaborated a scheme for dealing with poverty by applying co-operation to popular education. His views are set forth in two pamphlets (just received), "The Coming Great Change in Education" and "The Problem of Healthy Towns and a Healthy India."

The Poverty Problem.

LONDON UNIVERSITY DEGREES.

University Correspondence College

(FOUNDED IN 1887.)

Principal: WM. BRIGGS, LL.D., D.C.L., M.A., B.Sc.,
F.C.S., F.R.A.S.

Courses are provided for

Matriculation

and the

Intermediate and Degree

Examinations

of

London University.

Some Press Opinions.

"A well-organized Correspondence College, such as that which flourishes under the direction of Dr. Briggs, with its highly qualified and expert teachers, its clerical staff, and well-devised machinery, is a help of the most valuable kind."—**The Schoolmaster.**

"Having been in touch with students of the College for many years, we are convinced that the tuition is practical. The College Staff is one of remarkable brilliance."—**London Teacher.**

"The pioneers and still the great exponents of the Correspondence System of Tuition, are the University Correspondence College."—**Irish Times.**

"The work has grown enormously, and the success, as evidenced by the University Lists, has been great."—**School Guardian.**

"A large organization that has developed remarkably upon its inherent merits. The College is doing eminently useful work."—**Educational Times.**

"A well-established institution, doing excellent work in preparing candidates for the London University Examinations."—**Hospital.**

"The most remarkable modern educational institution in the kingdom, the most successful of its kind in existence."—**Publishers' Circular.**

"University Correspondence College is itself, in a sense, entitled to University rank, and in conjunction with London University, it is fulfilling a function of truly national importance."—**Scottish Educational Journal.**

"The excellence of the work done by University Correspondence College is too well known to need any recommendation."—**The Accountant.**

FREE GUIDES to London University Matriculation, Intermediate Arts, B.A., Intermediate Science, and B.Sc. (including Economics), post free to **Private Students** from the Secretary.

dustrial System." These pamphlets are being circulated by the Bengal Government Education Department, by the Commerce and Industries Department of the State of Mysore, and by the University of Calcutta, which has established classes, a lectureship, and a fund, to promote the study of the Poverty Problem. The literature published is sent to subscribers (2s. 6d. a year).

UNIVERSITIES AND SCHOOLS.

WALES.

Attention has already been called in these notes to the serious financial position of the Central Welsh Board, owing to the inadequacy of the Treasury grant of £1,250 per annum to meet its current expenditure. Not only is the Board precluded with its present income from enlarging the scope of its work, but is even faced with the difficulty of maintaining its normal activities at a satisfactory standard. A deputation was therefore appointed to wait upon the Chancellor of the Exchequer to explain to him how matters stand. Unfortunately Mr. Chamberlain was not in a position to increase the annual grant, though he suggested to the representatives of the Board an ingenious method by which some relief might be given, and his reply was therefore, to this extent, satisfactory. He informed the deputation that local education committees will be at liberty in future to make voluntary contributions, over and above their statutory obligations, towards the Board's expenses, and that the Treasury will recognize such additional contributions as qualifying for the 50 per cent. grant. An appeal will therefore be issued to each local authority drawing attention to this concession on the part of the Treasury, and urging upon them the importance of placing the finances of the Board on a sound footing. A special

Central Welsh
Board
Finances.

meeting will be held early in September to consider the whole question of the Board's finances, and it is to be hoped that, once for all, they will be satisfactorily adjusted, otherwise its future efficiency will be sadly crippled. It may, however, happen that the Report of the Departmental Committee on Secondary Education will be published before this special meeting is held, and that its recommendations will have a definite bearing on the whole question of the future of the Central Welsh Board, and so materially affect the position.

The circular issued by the Welsh Department in reference to State scholarships was even more belated than the English circular. The conditions governing the award of these Welsh scholarships are practically identical with the English conditions, though the method of selecting the successful candidates is different. For, instead of utilizing one of the higher certificate examinations for the purpose, the University of Wales has been asked to conduct a special examination during the week beginning on September 6, at each of the four constituent colleges. Pupils from Welsh schools are therefore compelled to sit for an extra examination, which may justly be regarded as a grievance. However, as the Central Welsh Board Higher Certificate Examination has not hitherto been recognized as an "approved" examination, the Welsh Department may be reasonably excused for inflicting this extra test upon the candidates. But we hope that next year the Department will be prepared to make the award on the result of the annual examination, and thus follow the practice of the county authorities in the case of the leaving exhibitions to the colleges.

The Welsh Department of the Board of Education have issued a circular to local authorities fixing January 1, 1921, as the appointed day for sub-sections 1 and 2 of Section 8 of the Education Act. The general effect of these sub-sections is to abolish half-time employment, to remove all provisions under which children can be exempted from school attendance below fourteen, and to enable local authorities to make by-laws requiring school attendance up to the age of fifteen. Authorities are requested to take immediate steps to make the intention of the Board known throughout their areas.

(Continued on page 606.)

The Book for Teachers. MODERN IDEAS AND METHODS.

By **JOHN EADES**, Head Master of Kirkstall Road School, Leeds; formerly Lecturer in English to Certificate Students at the Leeds Centre. Author of "The 'A.L.' New English Course."

Crown 8vo, xii + 191 pp., bound full cloth, net 4/6 (postage 6d.).

This book is not merely a collection of ingenious "wrinkles," but an attempt to give guidance to teachers and students in method on modern lines, in a way somewhat different from that found in the usual method books. It is theory and practice combined, and is the outcome of many years' teaching experience.

The "A.L." NEW ENGLISH COURSE, Book VII.

By **JOHN EADES**. Paper cover, published, 1/4. Limp cloth, 2/-. Specially suited for Senior Pupils, for Central Schools, and for the Lower Forms of Secondary Schools.

RELIGIOUS KNOWLEDGE.

GENERAL EDITOR - - REV. F. MARSHALL, M.A.

The Contents, in addition to other features of the Religious Knowledge Section of the Oxford and Cambridge Edition, include :—

1. **Introduction**, embodying Analytical Notes, Characteristics and Peculiarities of the Book; Historical, Biographical, and Geographical Notes.
2. **The Text**, with Marginal and Foot Notes, suggested by the requirements of the Examinations.
3. **REVISED VERSION COMMENTS**, COMPARING THE AUTHORIZED AND REVISED VERSIONS, AND SHOWING REASONS FOR THE CHANGES, &c. WHERE ADVISABLE THE GREEK HAS BEEN GIVEN.
4. **Critical Notes**, quoted from the Authorities.
5. **Glossary of Words and Phrases** explanatory of the text.
6. **The Edition throughout**, where advisable, is illustrated with numerous specially prepared Coloured Maps and Diagrams.

Marshall's Scripture Series.

ENGLISH LITERATURE.

Unless otherwise stated all Volumes in this Edition are Crown 8vo. The chief features include :—

1. **Prefatory**, dealing with date of Composition, Editions published, Anachronisms, Characteristics of the Work, and Character Sketches. In the Historical Plays Maps and Plans have been inserted to illustrate the text. The underlying idea of the Author has been exemplified.
2. **The Text**, with marginal and foot notes providing the necessary material for answering possible questions set at the Examination.
3. **Supplementary Notes**.
4. **Versification**, with Examples specially pertaining to the Book.
5. **Grammatical Notes** on the Grammar of the Period.
6. **Classical and other Allusions**.
7. **Glossary** of uncommon words.
8. **Examination Papers**, selected from the set questions. To take 40 minutes on each scene.

GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.4.

At the Cymmrodorion Section of the National Eisteddfod at Barry, there was an interesting discussion on a proposed national scheme for the compilation of a Welsh Domesday Book. The scheme aims at securing the assistance of teachers in Welsh colleges and schools, and the material collected will be made available in such a manner as the Board of Celtic Studies, in conjunction with the University of Wales, shall decide, and when tabulated it will be deposited in the National Library. The main purpose of the scheme was explained by Sir Alfred Davies (Secretary to the Welsh Department). It aims at three things: to stimulate interest on the part of teachers and children in history and geography; to rescue some, at least, of the fast-perishing treasures of folk-lore which abound in every hamlet in Wales; and lastly, to bring the school and the home into closer relation in connexion with educational work. Over four hundred schools have already undertaken to co-operate in the work of collecting interesting local lore, and in course of time an immense amount of material will be available. Mr. Fisher, who has taken the greatest interest in the scheme from its first inception, has recently examined some of the material collected, and has declared himself as highly pleased with the result. Approval of the project by such a distinguished historian and educationist should convince everyone that there is a distinct historical value in such a collection, and, therefore, it is to be hoped that before long every school in Wales will take a share in the compilation of this Welsh Domesday Book. The Barry Eisteddfod Committee had included in the programme a competition for the best collection of folk-lore, and it was very gratifying to understand that the three adjudicators were highly impressed by the great historical value of the material already garnered by this novel educational experiment.

Education at the Eisteddfod.

A meeting of past students of the University of Wales was also held at Barry. Prof. Ernest Hughes (Swansea), who presided, explained that the Union was the outcome of a feeling that an effort should be made to bring the University into a closer and more vital touch with the life of the nation. The Rev. Herbert Morgan enlarged upon this topic, stating that the university should reflect life as a whole, and, therefore, should give every man, not only a degree of professional efficiency, but instil in him that ideal which makes every profession a vocation. Particularly should this be the case in the sphere of

business and commerce. The University would therefore be doing useful work by turning its attention to two spheres—hitherto disregarded—namely, journalism and the trade union movement. Another interesting paper was read by Dr. Olive Wheeler, on "The Place of University women in the life of the community." It was, in her opinion, the duty of every university woman to bring that tolerant broad view of the problems of life, which she is supposed to have gained during her university training, to bear upon the everyday life of the community.

Mr. E. J. Osborne, of the Saltney Training College, has been appointed Director of Education for Radnorshire, and Miss Olive Adams as Organizer of Physical Training in Breconshire.

Appointments.

SCOTLAND.

The annual discussion of education in connexion with the Scottish Estimates was more than usually unsatisfactory this year. The occasion called for such a review of the working of the Education Act in its first year as the Secretary for Scotland would have made if there had been time for it. But most of the day given to Scottish business was occupied with questions of land settlement, and even when the education vote was under consideration the dispute between the Glasgow Education Authority and the Department got an undue share of attention, to the detriment of other matters no less urgent. Even so, a good deal of ground was covered by the various speakers, and Mr. Munro made one or two important pronouncements. In response to Sir Henry Craik, he practically scrapped the departmental circular which suggested the retention of teachers for a term of years by an authority which had subsidized them as students. He met the plea of Mr. Graham, Labour member for East Edinburgh, for the provision of adult education on a university standard, with a promise to encourage the co-operation of the authorities and the universities in this matter. Even those who were demanding the repeal of the Act on account of the financial burdens it had entailed were not sent away entirely dissatisfied. He said that inquiries were being made

Directors: George G. Harrap & G. Oliver Anderson,
2 & 3 PORTSMOUTH ST. KINGSWAY, W.C.2.

regarding serious hardships in the incidence of rating, and that, pending legislation, everything that could be done to minimize the admitted grievances by means of administrative action would be done.

The debate on the claim of the Glasgow Authority to have its share of grant calculated on its whole expenditure, turned on the interpretation of the phrase "approved expenditure." Major Henderson, who presented Glasgow's case, maintained that the Glasgow scales of salaries had been approved in accordance with Section 6 of the Act, and that grant should accordingly be calculated on the basis of this approval. The Lord Advocate, speaking for the Government and taking the Department's view, argued that there was a difference between approved expenditure and expenditure approved for purposes of grant. Mr. Munro, with less than his usual generosity of outlook, said that it was really a case of Glasgow against the whole of Scotland, and by implication, though avoiding specific reference, condemned Glasgow for lavishness of expenditure. What the effects of this discussion will be remains to be seen. Glasgow has still its right of appeal to the Court of Session, in spite of the Government. Apart from that, however, teachers will have something to say in the matter if the outcome of allocation of grant on the Department's principles is to encourage the more parsimonious authorities to make the minimum scale their maximum. The existence of the Glasgow scale has done much to allay the irritation caused by the unsatisfactory features of the national minimum, because it gave promise of the general adoption of more than minimum salaries. That, as Mr. D. M. Cowan, the teachers' M.P., pointed out, would mean a larger Treasury grant. And why not? It must be evident to everybody that the Act cannot be worked without more money than the rates provide. The sooner that money is forthcoming the better.

When, about a year ago, Mr. Alexander Emslie, who had been dismissed from the rectorship of Ayr Academy, was appointed head master of Spier's School, Beith, by the Ayrshire Education Authority, most teachers were glad to think that an unpleasant situation had reached a happy ending, and even those who knew that Mr. Emslie and his supporters were not quite satisfied expected to hear no more about the business. But trouble has broken out again. Seven teachers, out of a staff of less than a dozen teachers, in Spier's School have sent in their resignations on account of their differences with the head master. The authority referred the matter to a committee, which reported that, while the disagreement was on points which were individually trivial, it had led to a situation detrimental to the school, and it indicated various possible lines of action. The authority, after considering the evidence, came to a rather mixed finding: (1) It was resolved to transfer the head master and teachers of Spier's School to other schools under the authority; (2) it was agreed that Mr. Emslie should be suspended as from September 1, and meantime be asked to resign his position as rector of the school. Those who remember what happened when Mr. Emslie was dismissed from Ayr Academy will know that this is not the end of the case, and that for the Institute and the education authority and all parties concerned there is trouble ahead.

It was unfortunate for Mr. Emslie that, while this dispute with his teachers was in course, he was called on to stand trial in Kilmarnock Sheriff Court on a charge of assault, on the complaint of a boy of sixteen whom he had punished, as was alleged, excessively. Though the evidence showed that the punishment inflicted was unquestionably severe and that Mr. Emslie had twice boxed the boy's ears, the Sheriff completely exonerated Mr. Emslie on every count, even in regard to the ear-boxing, which teachers have generally assumed to be an illegitimate punishment. In his opinion the great risk attaching to this in some cases made it a form of punishment to be avoided, but he was not prepared to declare that the teacher who boxed a pupil's ears was a criminal. Apart from the merits or demerits of this particular case, teachers generally seem to be rather relieved by the Sheriff's finding. An adverse judgment would probably have led to unnecessary restrictions on teachers' rights of punishment, about which, rightly or wrongly, most of them are decidedly jealous.

A few months ago a strong committee of Glasgow University General Council reported in favour of a special examination for Leaving Certificates being held in time to allow students coming up for medicine beginning their course in the summer session. At present the written part of the examination is held

NAME.....

ADDRESS.....

J.E.N. 1920.

about a fortnight before the session begins, and the results are not available for some weeks. Now has come a request from Edinburgh University Court to the Glasgow Court for co-operation in a movement to secure this change. So long as the examinations are conducted as they are at present, however, there does not seem much likelihood of this addition to the burdens of the schools. If the universities do not know the extra strain which half-yearly examinations so important as the Leaving Certificate Examinations would throw on the pupils, the Department, with whom lies the ultimate decision, certainly does. There is one solution of the difficulty, however, which has the great advantage of being in line with the Department's own policy. The written examinations have only to be abolished and their place taken by school examinations similar to those by which the work in science is already tested. It would then be possible to arrange for the special examination of candidates for entry on a medical course without upsetting the whole work of the school.

Mr. Blyth Webster, who has made his mark as Lecturer in English in Edinburgh University, has been appointed Professor of English in succession to Prof. Lawson, in St. Andrews University.

Prof. Becker, the German whose tenure of the Chair of Astronomy in Glasgow University during the war has been the subject of much comment, is likely to retire at an early date. The University Court gave him leave of absence on full pay about the beginning of 1916, and is now seeking the confirmation of the Privy Council in bringing about his resignation.

IRELAND.

The death of the Rt. Hon. W. J. M. Starkie, at the early age of fifty-nine, removes the most prominent and distinguished personality in Irish education. For twenty-one years he was Resident Commissioner of National Education and for ten years chairman of the Intermediate Board. Previously he was Fellow of Trinity College from 1890 to 1897, and from 1897 to 1899 President of Queen's College, Galway. He was a great Greek scholar, and edited three of Aristophanes' plays. As president of the Classical Association of Ireland he delivered a brilliant address on Aristophanes. He was also a devoted student of Shakespeare, and succeeded Mr. Justice Madden as president of the Dublin Branch of the British Empire Shakespeare Society. But he will probably be best remembered as an educationist with a strong and fearless personality. His independence and originality were invaluable forces in Ireland, and it was to him that the country generally was looking to carry through the important educational reforms on which there is widespread agreement and of which the urgency is admitted. His experience and force would have been invaluable, and he was alone in his grip and knowledge of the present-day problems of primary and intermediate education. The Board of Intermediate Education, in a resolution on his loss, say: "His consummate scholarship and high ideals of education, combined with immense energy, keenness of insight, and perfect sincerity of character, gave him a commanding power as the administrator of a great system of education. As chairman of the Board for some years Dr. Starkie won the respect and attachment of all its members by his skilful and rapid management of the business, his geniality, candour, and his honesty of purpose."

The salaries of secondary-school teachers in Ireland must continue to be in an unsatisfactory state until the whole question which they involve is put upon a permanent and regular basis. The Catholic Head Masters' Association has sent a statement to the Press for publication, but they would be the last body to suggest that it offered a final solution of this difficult problem which must continue to unsettle Irish secondary education until temporary expedients are abandoned. The resolution of the Catholic head masters states that it was recommended that the schools affiliated to the Association should pay for the year 1920-21 a salary of £160 plus a bonus of £75 to all full-time registered male teachers. The resolution then adds that it wishes to point out that several of the Catholic secondary schools are unable to pay the above salary, and the Association can only recommend such schools to pay the most generous salary they can afford. The addendum shows how far from acceptable to the fully qualified assistant masters the proposal of the Association must be, as, in the absence of a list of the schools which can afford the suggested salary, no assistant master can tell whether the Catholic school in which he teaches will or will not pay the recommended minimum. The action of

the Government will, however, help to relieve without ending the present state of affairs.

The Government, driven into measures of some kind by the desperate state of the Irish teaching profession, have voted from the Treasury an additional interim grant of £50,000 for supplementing the salaries of intermediate teachers. The teachers will no doubt be glad to find that at last something is being done, and will also be glad to receive the bonuses which the grant makes available; but it must be pointed out that the principle underlying the grant is totally indefensible. In no trade union, in no Civil Service department, in no English or Scotch Government primary or secondary school would it be accepted for one moment. What is it that is being offered? Simply this: In August, 1920, when the school year is over, an entirely insufficient sum is offered to be paid in a most complicated manner to registered teachers for their work in the past twelve months of 1919-20. No promise is made for the coming year. The schools are to open their new school year this September in complete uncertainty as to their financial prospects for the coming twelve months. The Irish Education Bill is still where it was last November. It has twice received a first reading. It has never been explained or debated in the House of Commons. The Government cynically affirms from month to month that it is fully determined to proceed with the Bill; but, in spite of the well known confusion of Irish secondary education and of its imminent breakdown, it takes no steps to pass it, and has callously postponed it till the autumn session—shall we say, the Greek Calends?

The purpose of the new grant being definitely to increase the salaries of teachers, two objects are in view in the rules prescribed for its distribution; first, to apportion it among the intermediate schools, and secondly, to secure that it reaches its intended beneficiaries. The following is a summary of the rules:—The grant will be divided among the schools in the same manner as the Duke grant for 1919-20—viz. on a capitation basis. The share of each school is then to be divided into a certain number of equal parts, according to the number of registered teachers in the school and their salaries, and each teacher is to receive his share of these parts as follows:—If his total remuneration for the year 1919-20 was under £120, four parts; if between £120 and £160, five parts; if between

£160 and £220, six parts; if between £220 and £300, seven parts; and if over £300, eight parts. The money is to be allocated to the teachers, and receipts for the money to be forwarded to the Intermediate Education Board before September 30, and in case of any doubt or difficulty over the construction of the rules or as to any teacher's claim to share in the grant an appeal is allowed to the Lord-Lieutenant. This makes the seventh set of rules on which grants are paid to Irish secondary schools.

The Prime Minister's Committee on Classics, which has been sitting for several months at Whitehall, has taken evidence before concluding its work as to the position of classics in Ireland and the possible means of improving them. The evidence was given by Prof. R. M. Henry, this year's president of the Classical Association of Ireland, both on behalf of the Association and of the Queen's University, Belfast; by Mr. E. Halton, Fellow of Trinity College, in reference to Dublin University; by Mr. J. Thompson, head master of the High School, Dublin, in reference to Protestant secondary schools; by Miss O. Purser, Lady Registrar of Trinity College, in reference to classics in girls' schools and in Irish Universities; and by Prof. Corcoran, on behalf of the National University and of Roman Catholic schools. This evidence should be useful when Irish education comes to be reformed.

SCHOOLS.

VICTORIA UNIVERSITY OF MANCHESTER (University Scholarships awarded to women in 1920).—Entrance Scholarships: Alice Fay Exhibition—P. Beacall (Colston's Girls' School, Bristol); Dora Muir Scholarship—M. Pollard (Chester City and County School); Derby Scholarship—K. P. Kirsop (Eccles Secondary School); Entrance in Italian—H. U. 750 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **P.O. Box A 27, Huddersfield.**

367 Pages. 27th Edition. Price 3/6.
100 Exercises. 350 Questions.

The **ONLY TEXTBOOK** to which there is a **FULL KEY.**

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Royal Society of Arts**, the **College of Preceptors**, **Oxford** and **Cambridge Locals**, the **London Chamber of Commerce**, and the **National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Royal Society of Arts**, the **College of Preceptors**, the **Oxford** and **Cambridge Locals**, and the **L.C.C.**, are included. **200,000 copies sold.**

LONDON: SIMPKIN, MARSHALL, HAMILTON KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS and Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box A 27, Huddersfield.**

Ninth Edition. 380 Pages.
Price 3/6.

**80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only **practical, up-to-date** book on **Commercial Correspondence** and **Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graded**, and the **teacher** is **saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the **only Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office**. **100,000 copies sold.**

PRIMARY SCHOOL NOTES.

The Vacation Courses.

THE conclusion of the summer vacation courses shows a wide expansion both in the range of courses organized and in the number of students attending them. There is no doubt that the students bring a keen enthusiasm to their classes, which in many cases involve arduous preparatory reading and study. In order to secure the further development of vacation classes, three main considerations await the attention of the authorities concerned: (1) That teachers should not be allowed to suffer in professional fitness by attending courses; otherwise the increase in mental vigour may be sapped by flagging physical health caused by the loss of a proper holiday. (2) That successful attendance should receive full recognition by universities, the Board of Education, and local education authorities; many teachers feel that courses organized by university lecturers in studies which have academic standing should rank as the equivalent of work done in degree or diploma classes. (3) That members of school staffs should be allowed to carry on vacation studies to a higher standard by means of a more liberal provision of courses, and the institution of a scheme which would allow all teachers in turn to have leave of absence to attend them. The policy of taking teachers completely out of their ordinary environment by fixing vacation courses in centres which have inspiring traditions has proved successful in every way.

The Liberation of the Half-timer.

THE signature of the Turks to the terms of Peace has made it possible for the Board of Education to raise the age of school exemption to fourteen years on January 1, 1921. This involves the liberation of the half-time child from the toils of premature labour. There has been great bitterness of feeling among supporters of education in the industrial North that the "appointed day" of freedom should have been regulated by the willingness of Turkey to sign the Peace terms. No lover of children can see the necessity of delaying the event to January next, since the

interval will doubtless be utilized by thoughtless and selfish parents to accept the last opportunity of selling their children to the bondage of the employer who accepts half-time labour. Children who become half-timers during the December term at the age of twelve years will continue at school until they are fourteen; and, as a result, the English school system will be encumbered with the half-time scholar until December, 1922. In other words, the Education Act of 1918 cannot become fully operative in this respect in Lancashire and Yorkshire until January 1, 1923, and until that date the clogging presence of the half-time pupil will continue to block the progress of the full-time children.

The Lapse of the Burnham Committee.

IT is significant that, since the acceptance by the National Union of teachers of the minimum scale drawn up by the Burnham Committee, little or nothing has been heard of its further deliberations. It is clear that certain scales have been drawn up in continuation of the minimum basis, and it is known that these new scales have been adopted by certain local education authorities. In such circumstances it is difficult to understand where the policy of secrecy ends and that of open diplomacy begins. Considerable misunderstanding might be avoided if public reports of the work of the committee could be given periodically. At the present time there is a rising volume of dissatisfaction with the position. It is well known that the Burnham minimum proposals were accepted in consideration of the difficult financial position of rural teachers. Since then the economic position has gone from bad to worse; house rents, coal, and bread have all advanced at an alarming rate, and teachers are suffering great privation in nearly every part of the country. Though it is being silently borne, it is none the less real. There are indications that, with the reassembling of the schools after the vacation, there will be a vigorous agitation on the part of teachers for adequate rates of remuneration throughout the country.

The Resumption of School Medical Inspection.

WHILE it was possible in some areas to continue a full service of school medical inspection during the war, a full resumption of the

(Continued on page 616.)

THE BOARD OF EDUCATION emphasizes the usefulness of local history thus:—"It is essential that in each school attention should be paid to the history of the town and district in which it is situated. All great and important events which have taken place in the neighbourhood will naturally be chosen for more detailed treatment. Several changes, such as the foundation and dissolution of the monasteries, should be illustrated by reference to the effect upon the particular district. . . . There must, in all cases, be included a study of those actually existent historical remains such as castles, city walls, monasteries, which are accessible from the school, and in connexion with this the study of the earlier periods must include some knowledge of the elements of architecture."

Two History Readers which fulfil the above conditions.

The County of the White Rose.

An Introduction to the History and Antiquities of Yorkshire.

By A. C. PRICE, M.A., formerly Scholar of Pembroke College, Oxford; Author of "Leeds and its Neighbourhood," &c.

415 pages. Crown 8vo. With upwards of 70 Illustrations and a folding map of the three Ridings. Strongly bound in cloth boards. 2s. 6d. net.

Education says:—"Much History has been made in Yorkshire, and here we get just enough about it to make us want to know more. There are chapters on the Land and its Inhabitants, from the earliest historical times down to modern Yorkshire—castles, abbeys, churches, towns, each in turn are described and illustrated. There are 383 pictures, plans, and maps. The whole book is a treasury of information and most delightful reading."

The Story of the East Riding of Yorkshire.

By HORACE B. BROWNE, M.A.

368 pages. Crown 8vo. With 170 Illustrations. Bound in Art Cloth Boards. Price 2s. 6d. net.

The School World says:—"Mr. Browne gives scarcely more than a reference to what will be found in the ordinary textbooks, and so saves space for more local details. The story is well told, geology, pre-history, architecture, all coming in for treatment, as well as the more obvious facts of social and political life."

sistant Masters or Governesses can, on supplying an
outline of their requirements, obtain a list of those
Candidates on the books of the Association likely to
prove suitable.

Assistant Masters or Governesses requiring ap-
pointments are invited to make application to the
General Manager of the Association. No preliminary
fees are charged.

Transfers and Partnerships.

The Association undertakes the negotiation of
School Transfers or Partnerships. Terms and par-
ticulars on application. All communications on this
subject are treated as strictly confidential.

A prospectus, giving the names of the
Directors of the Association, sent on
application to the General Manager:—

Mr. A. V. STOREY,
22 Craven Street, Trafalgar Square, W.C. 2.

work has been delayed in many districts until the present year. Doctors are coming back to the schools with a depth of knowledge, both with relation to the diagnosis and treatment of disease, which has been accumulated as a bitter experience of war conditions; with the result that the children are receiving what is practically specialist treatment. This is the more fortunate inasmuch as there is a growing conviction among teachers that children are found to be delicate in greater numbers than was formerly the case, probably owing to the fact that infant welfare movements have enabled weakly children to survive the critical stages of early infancy who, under former conditions, would have died. The poor feeding of children in districts below the poverty line, which has marked the incidence of rising prices since the advent of the war, has also tended to handicap the new generations of children who are now being taught in the infant schools. The vigour with which the doctors are attacking the problem, and their whole-hearted co-operation with the teachers, promise in the immediate future to be attended by remarkable results. There is a growing conviction among teachers that defects in the education of children are largely due to abnormal conditions of physical health; and that, quite apart from the keen joy in life which sound physical health brings to children, a considerable uplift in the general standard of primary education may be anticipated as the medical schemes develop more fully.

* * * * *

National Union of Teachers.

A FURTHER rebuff has been given to the movement of the Ministry of Labour to employ teachers, without recompense, upon the work of filling up its forms on account of children leaving the schools. The attempt of the Ministry to constitute itself an authorized body to direct the services of teachers has naturally aroused the active opposition of education authorities and teachers alike; although for some unexplained reason the Board of Education has stood passively by while the attempt to exploit the nation's teachers was being made. The Executive of the N.U.T. has passed a resolution calling upon the Government to constitute the Board of Education and the local education authority as the statutory bodies to supervise the general education, health, employment, and after-care of young persons between the ages of two and eighteen years.

PRIZE COMPETITIONS.

THE prize for the August competition is awarded to "King Coel"; *proxime accessit*, "Agricola."

The name of the prize winner for July has not yet been received.

Lines by Richard Dehmel.

By "KING COEL."

THE QUIET TOWN.

The town in a valley lieth,
Closeth a dull, wan day;
Nor moon nor any star
Hung in the heavens afar;
The dark will stay.
From every hill-top creeping,
Cloud follows after cloud,
Veiling the town-house, barn, and spire,
And bridge, all smoke- and mist-enwrapped,
Still, as if sleeping.
But in his deep dismay,
The traveller sees some glimmering rays,
And thro' the gloom profound
There steals a gentle sound—
The children's hymn of praise.

By "AGRICOLA."

THE SILENT TOWN.

A sleeping town in a valley;
A wintry day that dies;
Ere long nor moon nor star will show,
Only the shadows brooding low
Beneath the darkening skies.

Mists roll down from the ridges
And rest upon the town ;
No roof, no court, no house is seen,
No sound may pierce the smoky screen,
Hardly the towers and bridges.
Yet while the Wanderer shuddered
A sudden light gleamed far below,
And through the murk of smoke and haze
A child's voice sang a hymn of praise
Sweet and low.

We classify the 35 versions received as follows :—

Class I.—(a) King Coel, Agricola, Hibernia, Goosegrass, Q.C., Roggenfeld, Rosemary, Katty Ann.

(b) Old Times, Borderer, Homunculus, Para, Noémi, Pegnitz, Sussex, Chingleput, Danel, B.M.H.

Class II.—Iva, Harte Nuss, E.A.N., Schattenlos, S.U., Fifi, D.W.D., Ixia, E.L.A., Brawney, C.H.E., Cassandra, Tom.

Class III.—Wiesel, Zephyr, Saton, E.M.H.

A Prize of Two Guineas is offered for the best translation of the following extract from Th. Gautier's "Voyage en Russie" :—

Moscou.

On dit que Moscou renferme plus de trois cents églises et couvents ; nous ne savons si ce chiffre est exact ou purement hyperbolique, mais il paraît très vraisemblable quand on regarde la ville du haut du Kremlin, qui lui-même renferme un grand nombre de cathédrales, de chapelles et d'édifices religieux. On ne saurait rêver rien de plus beau, de plus riche, de plus splendide, de plus féérique, que ces coupoules surmontées de croix grecques, que ces clochetons en forme de bulbe, que ces flèches à six ou huit pans côtelées de nervures, évidées à jour, s'arrondissant, s'évasant, s'aiguissant, sur le tumulte immobile des toitures neigeuses. Les coupoules dorées prennent des reflets d'une transparence merveilleuse, et la lumière au point saillant s'y concentre en une étoile qui brille comme une lampe. Les dômes d'argent ou d'étain semblent coiffer des églises de la

lune ; plus loin ce sont des casques d'azur constellés d'or, des calottes faites en plaques de cuivre battu, imbriquées comme des écailles de dragon, ou bien encore des oignons renversés peints en vert et glacés de quelque pailloon de neige : puis à mesure que les pans se reculent, les détails disparaissent même à la lorgnette, et l'on ne distingue plus qu'un étincelant fouillis de dômes, de flèches, de tours, de campaniles de toutes les formes imaginables dessinant d'un trait d'ombre leur silhouette sur la teinte bleuâtre du lointain et en détachant leur saillie par une paillette d'or, d'argent, de cuivre, de saphir ou d'émeraude. Pour achever le tableau, figurez-vous, sur les tons froids et bleutés de la neige, quelques traînées de lumière faiblement pourprées, pâles roses du couchant polaire semées sur le tapis d'hermine de l'hiver russe.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on September 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

THE STUDY OF ENGLISH.—Mr. E. B. Osborn is one of our liveliest critics, and many buy the *Morning Post* on Fridays simply to read his column. Lately he has been tilting at what he calls the Beowulfian type of professor of English, and takes the London B.A. Honour papers in English as examples of what such papers should not be. But, in doing so, he uses the strange word "hodsmen of learning." Surely so acute a writer should read his proofs more carefully.

University Tutorial Press.

Mathematics and Science.

ALGEBRA, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.
"Maintains a high standard of excellence we are accustomed to expect from so well known a source."—*Journal of the Assistant Masters' Association.*

ALGEBRA, JUNIOR, TEST QUESTIONS IN. By F. ROSENBERG, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.
"A complete series of examples carefully graded."—*Educator.*

ARITHMETIC, THE PRIMARY. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. Third Edition. Parts I and II. 1s. each. Part III. 1s. 6d.

An Introductory Course of Simple Arithmetical Exercises covering all the subjects usually taught in schools, from the four simple rules to stocks and shares.

ARITHMETIC, PRELIMINARY. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian.*

ARITHMETIC, THE JUNIOR. By R. H. CHOPE, B.A. With or without Answers. Third Edition. 4s.

"The book is well got up, and has a quite good selection of examples throughout."—*Mathematical Gazette.*

ARITHMETIC, JUNIOR, TEST QUESTIONS IN. Edited by A. G. CRACKNELL, M.A., B.Sc. 1s. 9d. With Answers, 2s.

"No better supplement to the ordinary class-book could be desired."—*Secondary School Journal.*

BOOK-KEEPING, JUNIOR. By T. C. JACKSON, B.A., LL.B., 2s. 3d.

"Students commencing Book-keeping will find this manual well fitted to enable them to gain an early grasp of the subject."—*Schoolmaster.*

BOTANY, JUNIOR. By FRANCIS CAVERS, D.Sc. 4s.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*

CHEMISTRY, PRELIMINARY. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s. 3d.

"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Scottish Educational Journal.*

CHEMISTRY, JUNIOR. By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.

"The results of fifteen years' experience of a thoughtful teacher are always valuable. A thoroughly sound course of practical instruction."—*Nature.*

CHEMISTRY, JUNIOR PRACTICAL. By H. W. BAUSOR, M.A. 1s. 9d.

"An excellent guide for the beginner in practical laboratory work."—*Educational Times.*

GEOMETRY, PRELIMINARY. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 3s.

"Will prove distinctly helpful to the beginner in the study of Geometry."—*Bookseller.*

GEOMETRY, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc., 4s.

"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

HEAT, JUNIOR. By JOHN SATTERLY, D.Sc., M.A. 3s.

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

MAGNETISM AND ELECTRICITY, JUNIOR. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.
(FOUNDED 1889.)

**THE NORMAL
CONVERTS YOUR STUDY
INTO A UNIVERSITY.**

Founded nearly thirty years ago by teachers for teachers, the Normal stands to-day a monument to the fact that at its inception it was based upon right principles and built on sound methods. The Normal has stood the test of time, and is firmly established as the most reliable Correspondence College. The keystone of the Normal is the concentration of the efforts of most highly qualified and experienced Tutors on the requirements of the individual student. Thus the Normal converts your study into a University.

Commercial Arithmetic and Accounts (in Three Parts). By H. H. GREEN, B.Sc., Secondary School Lecturer in Commercial Arithmetic, East Ham Technical College, and THOMAS FRANKLIN, late Lecturer in Book-keeping and other Commercial Subjects, London County Council. Parts I-III, 2s. each. Complete, 6s.

The Arithmetic of the Decimal System. By J. CUSACK, LL.D., Founder and Principal of Cusack's Training College. 6s.

The Scottish Educational Journal.—"We can only applaud Dr. Cusack's heroism, and strongly advise all teachers to procure his work. They will be doing useful service if they read it to become advocates of the only sane simplified system of teaching arithmetic."

Modern Geometry. The Straight Line and Circle (a New and Revised Edition of the Author's "Plane Geometry for Advanced Students, Part I"). By CLEMENT V. DURELL, M.A., Senior Mathematical Master at Winchester College. 6s.

The Journal of Education.—"In its new form the book will continue to maintain its reputation as one of the best introductions to modern geometry which can be placed in the hands of students."

A Classbook of Organic Chemistry. By J. B. COHEN, Ph.D., B.Sc., F.R.S., Professor of Organic Chemistry, The University, Leeds. Vol. I.—For First Year Medical Students and Senior Science Students in Schools. 4s. 6d. Vol. II.—For Second Year Medical Students and others. 4s. 6d.

Nature.—"The first volume, published in 1917, was meant to serve as an introduction to organic chemistry, and the two volumes together can be thoroughly recommended as a most excellent and handy little compendium, which should find great favour among students and teachers alike."

REVIEWS AND MINOR NOTICES.

THE NEW PSYCHOLOGY.

The New Psychology and its Relation to Life. By A. G. TANSLEY. (10s. 6d. net. Allen & Unwin.)

Of the many popular books upon psychoanalysis that have of late been issued in such numbers, this is indisputably the best. Its style is clear; its matter sound. It shows an acquaintance with earlier work in psychology, not indeed so complete as might be desired, yet fuller and wider than that displayed even by many of the leading exponents of psychoanalysis themselves.

The author's general aim is admirable. Psychoanalytic studies have been concerned, in the first instance, with abnormal minds; they have, however, as their originators have seen, profound bearings upon normal life. These Mr. Tansley has endeavoured to systematise; and his own contribution consists in a combination of the discoveries of the pathologist with the standpoint of the biologist. The drift of the few criticisms we have to offer will be simply that he has not pushed home his own biological interpretation so firmly and so far as he might.

The doctrines of psychoanalysis are, for the most part, set forth by Mr. Tansley from the standpoint of Freud rather than of Jung, but his exposition shows no violent bias towards any one school. The discussion is divided into three broad heads: the structure of the mind, the energy of the mind, and the contents of the mind.

The structure of the mind is rightly approached from a biological standpoint. Within that structure as developed in man, the most important features, we are told, are the instincts. These are conceived as having a physiological basis, patterned on that of the simple reflex, but marked by the three main aspects of all conscious process—knowing, feeling, and striving. The definition and description given are thus those familiarised in this country by Dr. McDougall. In dealing, however, with the unconscious structure of the mind, the writer leaves this physiological basis, and plunges into the usual obscurities of a mental substructure which is neither conscious nor physical, a kind of "subliminal self." In describing the acquired layer of mental structure, superimposed upon this instinctive stratum, the "complexes" so-called, he gives us a series of diagrams which would apply quite as well to a physiological mechanism as to a hypothetical basis which is supposed to be purely mental.

The concept of psychic energy, he tells us, has been developed chiefly by Dr. Jung, under the term *libido*—here translated "interest." Dr. McDougall, however, had previously given a very clear account of psychic energy, conceived rather as neural energy, an account which thus harmonises with the physiological conception of mental structure that Mr. Tansley has in part accepted from him.

Conflict, repression, and the more important outcomes of repression—dreams, forgetfulness, and the like—are described clearly and concisely under the heading "Byways of the *Libido*." And there are two important chapters on reason and rationalisation in everyday life.

Until recently, psychology, we are told, was limited to the contents of the mind, to the thoughts and feelings of which we are fully conscious. This statement, which is so repeatedly made by psychoanalysts, fails to do justice to the striking advances made, before Freud's work had reached this country, by living English psychologists—by Dr. Ward, Dr. Stout, Dr. McDougall, and Mr. Shand. When we come to the chapters on the contents of the mind, we naturally expect some account of conscious contents, in the traditional sense of the phrase. We find, however, only a more detailed description, sound and lucid enough in itself, of the primitive instincts and the commoner complexes.

In a topic where so much narrowness of view has been shown, however, to blame so broad a treatment because it is not broader still, savours, perhaps, of hypercriticism. General readers, and teachers more particularly, who desire a sane

and systematic account of psychoanalysis could hardly hope, in the present state of knowledge, for a better introduction.

A History of English Philosophy. By W. R. SORLEY. (20s. net. Cambridge University Press.)

There was need for just such a book as this. Prof. Sorley has not only perceived the need, but has met it in a remarkably efficient way. He has produced a self-contained history that presents a unified and well proportioned view of the nature and aims of English thinking. He recognizes that such a history may be written either from the philosophical point of view of the historian or from that of the writers to be dealt with, and definitely decides in favour of approaching his subject from the point of view of the philosophers themselves.

The next important point to be determined is the balance between the biographical elements and the purely philosophical. Nowhere is it more easy to blunder, so it is something of a triumph to have achieved the happy mean here placed before us. The reader is put on friendly terms with the philosophers as men, and is led imperceptibly into the philosophies they represent.

A third source of danger is the allocation of the various writers to their proper place in the hierarchy—a quarrelsome business this, for we have all our special preferences. For example, when an admirer of Hume reads that "John Locke may be regarded as, on the whole, the most important figure in English philosophy," his prejudice is at once roused, but his fears are allayed when, some seventy pages further on, he reads of Hume's recognized "claim to rank as the greatest of English philosophers." One wonders which ranks highest in Prof. Sorley's mind, "most important" or "greatest." We can picture him smiling and passing on to other allocations. For a striking feature of the book is the skill with which the various philosophers are grouped in relation to each other. The filling up of the interstitial places among the first-rank men is admirably done. Even the weary man who has read thousands of philosophical examination papers—or at any rate examination papers on philosophy—and has reviewed scores of treatises on this subject, will find a certain exhilaration, and even some belated instruction, in reading these pages.

A fourth danger lies in the way of those who escape the others: this is the tendency to over-systematize. Here Prof. Sorley is almost morbidly alert, and illustrates, from foreign critics, errors that he might have made. For his part, he lets each philosopher of sufficient rank speak for himself, and in the case of those not important enough to be placed individually on the witness stand, he puts their views forward in a way that is often more effective than the original text of their works. Realizing vividly the dangers of anything but first-hand reading, Prof. Sorley makes a special point of presenting the views of others through a colourless medium in the first instance, though, of course, he reserves to himself the right to criticize vigorously the matter thus presented.

In addition to an excellent index of authors, the book is provided with a most useful Comparative Chronological Table, giving the dates of the chief works in English philosophy along with the dates of some other writings, English and foreign, and of some leading events. It runs to 18 pages, and is followed by a bibliography that covers 54 more. Perplexed university students of philosophy should rise and call Dr. Sorley blessed.

ENGLISH LITERATURE FOR SCHOOLS.

- (1) *Shakespeare's Richard II.* Edited by Dr. R. WILSON. (1s. 9d. net.) (2) *Tales from Tolstoy.* (1s. 6d. net.) (3) *The Lore of the Wanderer.* Edited by G. GOODCHILD. (1s. 9d. net.) (1s. 6d. net.)—(5) and (6) Macmillan's "American Pocket

Classics."—(7) *Westward Ho!* By CHARLES KINGSLEY. (Abridged.) With an Introduction and Notes by J. C. ALLEN. (1s. 9d.) (8) *The Cloister and the Hearth.* By CHARLES READE. (Abridged.) With an Introduction and Notes by J. C. ALLEN. (2s.)—(7) and (8) Longmans' "Classbooks of English Literature."

Whatever the foreigner may be, the English child is rarely a reader by nature, and the foremost aim of literature lessons must be to convert him into a lover of books. He needs introduction to many kinds of writing, for what attracts one individual leaves another indifferent, or even repels him. In every class, therefore, several texts ought to be in simultaneous use, as well for the development of different types of mind as for variety in teaching. All pupils must practise reading aloud in class; all must learn to read silently, and reproduce in some form the substance of their reading; all must learn passages by heart; all must do exercises from the books read demanding independent thought and judgment; but the same book is not necessarily the right one for all these purposes.

Not long ago it was the custom to dole out to each of the upper classes in a school a Shakespeare play, at which the class worked for the whole year, and this was often the only text. Now a better fashion prevails, but we must beware of going to the opposite extreme, for it is still highly desirable that certain works should be studied in detail, among them at least two of Shakespeare's greatest plays. This would still leave time for the reading aloud of a number of others. For the more intensive study of a play, "Richard II," in "The Kings' Treasures of Literature" (1), is admirably adapted. Of the 191 pages, 113 are occupied by the text, explanations of difficult words and phrases being given at the foot of each page, while 10 pages are devoted to appropriate and ingenious exercises. One feature of this edition is the analysis of Richard's character, detail by detail, through each act and scene of the play, to serve as a model for the pupil for similar work, while an Acting Appendix gives valuable hints for that indispensable adjunct to the Shakespeare lesson—acting.

A book like the "Tales from Tolstoy" (2) is most suitable for private home reading by the pupil, and it furnishes the teacher with questions sufficient to test whether pupils have read and digested the stories. In the same series, "The Lore of the Wanderer" (3) lends itself to "loud" reading and discussion in class, and would suggest further study of the essay form and of the authors represented in the collection, as well as essay writing, hints for which are given at the end.

In these days of expensive books, pupils in middle forms have reason to rejoice that there are available for class reading cheap new editions of "Westward Ho!" (7), "Oliver Twist" (6), and of that finest of historical romances, "The Cloister and the Hearth" (8)—all with only just sufficient notes to ensure understanding of the text, while Irving's "Life of Oliver Goldsmith" (5) will prove a delightful novelty to higher forms, who too seldom have a chance in school to make acquaintance with American writers. This book is a help to the teacher in that it suggests thirty composition subjects, material for which the pupil may be expected to gather from the text, if he has no time for wider reading.

Older pupils, who are always the most interested in writers of their own time, will welcome "Modern Poetry" (4), which contains many poems worth learning by rote and many in language near enough to their own to be set as models for verse exercises. A novel feature is the blank pages at the end, intended for the insertion by the pupil of striking new poems from contemporary publications.

CLASSICS.

The "Birds" of Aristophanes considered in Relation to Athenian Politics. The "Prometheus Bound" of Aeschylus represented in English and explained. By E. G. HARMAN. (10s. 6d. net each. Edward Arnold.)

In the second of these volumes, which are both concerned with a new and allegorical interpretation of the part played by Zeus in the "Prometheus Vinculus" of Aeschylus and in the "Birds" of Aristophanes, Mr. Harman deprecates "the tendency to read into

(Continued on page 630.)

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

the works of antiquity ideas which belong to later spiritual developments" (page 31). Aeschylus is not—as we have always considered him in the past—a great religious dramatist, but rather an ingenious writer of political allegory. "By 'Zeus,' in his character as antagonist of Prometheus, the sovereign democracy of Athens is, in my opinion" (says Mr. Harman, page 13, of the second volume), "intended; the 'foolish marriage' . . . is the 'marriage' of Athens to the sea, the new naval policy favoured by Themistocles; . . . under the character of Prometheus, Aeschylus is portraying himself; . . . the friendship to mortals is the advocacy of the claims of the subject allies, who were at that time becoming oppressed by the Athenians; . . . the 'gods' are the Athenians." So startling and unorthodox a theory Mr. Harman attempts to justify by a long historical survey, in the first of these two volumes, of the fierce constitutional struggles that filled the life of Aeschylus, who sided with Aristides against Themistocles. This historical survey is the most balanced and most valuable part of the work which Mr. Harman here offers to the public. It does not, in our opinion, necessitate his "Zeus" allegory in Aeschylus and Aristophanes, but it contains many valuable reflections for the historian. Of our incidental objections to the Zeus = Demos equation, suffice it to mention the improbability that at the time of the production of the "Prometheus Vincit" Athens had already begun to be regarded as a "tyrant city," and the difficulty of taking "Zeus," in that play, as at one moment the allegorical impersonation of Demos and at another "the deity of religious worship" (page 24, Vol. II). But the fundamental improbability of Mr. Harman's interpretation resides in the fact that allegory is a comparatively late literary development. It is certainly alien from the spirit of primitive literature, whereas remarkable spiritual insight may well be manifested by such literature, as indeed we think it is by Greek literature *pace* Mr. Harman, who says that "in spiritual development they (the Greeks) were still primitive" (preface to "Birds"). And is it likely that Aristophanes, who was nothing if not orthodox and a supporter of religious conservatism, would write of Demos as = Zeus?

"The Works of Aristotle translated into English."—(1) *Atheniensium Respublica*. By Sir F. G. KENYON. (2) *Oeconomica*. By E. S. FORSTER. (In one vol., 5s. net. Clarendon Press.)

(1) Sir Frederic Kenyon is an authority upon the *Ἀθηναίων Πολιτεία*, so we are thankful for a revision of his well known translation of the treatise, especially as he has now added the last six chapters, which had not been adequately pieced together when his translation was first published, soon after the discovery of the papyrus in 1891. The treatise is of immense importance to students of history, and those of them who have little Greek will be very thankful for this up-to-date translation of a document which concerns them so vitally.

(2) Mr. Forster's translation of the two books of *Oeconomica* contained in the Aristotelian *corpus*, though of less value to the historian, will be equally welcome to the curious scholar. The first book smacks largely of Xenophon, and the second, as Mr. Forster points out, is certainly Hellenistic. It is neither profound nor interesting, consisting largely of disconnected anecdotes about means of raising money; but Mr. Forster has done his work well, and those interested in the shady side of ancient finance can here read of the rough and ready methods adopted, by tyrants and others, without having the trouble of deciphering the Greek.

EDUCATION.

"The New Humanist Series."—*Education for Self-Realization and Social Service*. By F. WATTS. (7s. 6d. net. University of London Press.)

The "New Humanist Series," under the honorary editorship of Mr. B. Branford, makes a good start with Mr. F. Watts's volume on "Education for Self-Realization and Social Service." Mr. Watts is already known for his suggestive little work on "Echo Personalities," and he adds to his reputation by this new venture. To some extent he traverses well trodden ground, as, for instance, when he gives a *résumé* of "modern western educational theory." Even here, however, the chapter on present-day writers and their tendencies will give the student what he might find it difficult to get elsewhere. We are glad to see that he gives prominence to the work of John Dewey, whose combined philosophical and practical insight has, perhaps, not been duly appreciated in this country, except by those who train the teachers of very young children. Mr. Branford's acute characterization of the six great periods of human life, reprinted at the end of the same chapter, is particularly timely now that we are beginning to think of education as a life-long process, and makes one look forward with interest to his coming contribution to this series. In Mr. Watts's chapter on the culture-epoch theory, he rightly shows that Dewey gave a meaning to that generally discarded phrase which makes its retention worth while. In the chapters on "The Sublimation of the Primary Ten-

dencies," "Vocational Aptitudes," and "Self-Government in the School," the student will again find a good deal of matter usefully brought together, for which he would otherwise have to search in a number of recent books and periodicals. Both in its general design and in such details as we have exemplified, Mr. Watts's book will, in our opinion, certainly meet a need.

Board of Education.—*Educational Pamphlets*, No. 39: *Notes on Camping*. (1s. net. H.M.S.O.)

The Board of Education have certainly done well to add to their list of educational pamphlets these brief but comprehensive *Notes on Camping*. The notes are obviously based upon practical experience of a varied character, and, though they may contain nothing new to the experienced camper, they supply exactly what is needed at the present time by many teachers, and by local authorities considering how to carry out the relevant section of the Act of 1918. The several chapters deal with the educational value of the camp, the necessary staff, the choice of site, equipment, kitchen and diet, health and first aid, camp routine, games and sports, discipline, and costs. There are few wasted words, and the pamphlet supplies for a modest shilling what in less skilful hands might easily and uselessly have been expanded into a comparatively expensive book. Though the notes are written almost entirely from the standpoint of camping for boys, the bulk of the information and advice is equally applicable to girls, and a brief appendix sets forth the special considerations applicable to a girls' camp. Another appendix gives a list of useful books on various aspects of camp life.

The Cosmic Commonwealth. By E. HOLMES. (5s. net. Constable.)

Mr. Holmes's philosophical position, the genesis of which is broadly explained in his autobiographical sketch, is further expounded in his latest volume entitled "The Cosmic Commonwealth." That the existing social structure was badly planned is shown, he argues, by its recent collapse. We have, in fact, been the victims of an unworthy conception of God, and thence of a false conception of the relations of men. Orthodox religion has thought of God as the autocratic Ruler of the universe, as the Overlord of a feudal hierarchy which is secular as well as spiritual; the guarantor of the "divine rights" of kings—and of multimillionaires; the arbitrary dispenser of the "good things" of life. What we have to do is to revise our conception of God. To democratize human government is well; but, if we wish to destroy the spiritual headquarters of militarism, we must democratize our conception of God. The conception of a God who is above and beyond Nature has failed. He is at the heart of Nature, the heart of human nature, the heart of man. He is the soul of the universe, the soul of the Cosmic Commonwealth, the immanent God, the Inward Light; and to Him we must look for guidance in our efforts to become worthy citizens of the Cosmic Commonwealth.

Schools of Gaul. By T. HAARHOFF. (12s. 6d. net. Oxford University Press.)

Little by little the labours of scholars are making it possible that the history of education in Europe shall one day be written with some approach to system and completeness. It is quite true, as Prof. J. W. Adamson points out in his recently published "Short History of Education," that the historian must run his matter into national moulds, but it is also true that much of western history forms one connected story, as he himself well exemplifies in his earlier chapters. Readers of such a book as his, who wish for further light upon the fourth and fifth centuries after Christ, will turn with interest to Mr. Haarhoff's scholarly volume on education in Gaul during that period. As he says, it is a period which has curiously escaped the makers of books, notwithstanding its claims to notice. Like our own, it was a transition age, in which education was passing from paganism and entering into the Christian era. Further, the problem of complex nationality, which we are apt to think of as entirely modern, was as real in Gaul sixteen centuries ago as it is in any existing state. Mr. Haarhoff's book, with its careful scrutiny of available material and its wealth of references to original authorities, will naturally make its chief appeal to the scholar, but we hope it will receive close attention also in training colleges where the history of education is studied and cultivated.

Federal Council of Lancashire and Cheshire Teachers' Association: a National System of Education. (1s. net. Manchester University Press; Longmans.)

This thoughtful piece of work, carried out by a local federation of teachers' associations, is of more than local significance, and deserves the attention of teachers and directors in all parts of the country. It is an attempt to survey the whole ground of educational requirements and of corresponding educational institutions. The results are set forth in a definite and businesslike manner, partly by means of a "flow diagram," and partly by means of a

GEOGRAPHY

The Teaching of Geography

By B. C. WALLIS, B.Sc. Crown 8vo. Second impression. With 12 illustrations. 5s net. Cambridge Handbooks for Teachers

"This book covers most of the questions that interest the practical teacher, and on each and all of them he has much to say that is valuable. . . . Everywhere full details are given in a style attractive, lucid, and often of considerable literary merit. In many places there is geographical information of great value, information such as a teacher cannot always find in the text-books at his disposal. . . . We commend the book to all teachers of geography, because it is so eminently sensible, practical, and stimulating."

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

concisely worded series of recommendations. Mr. Maxwell Garnett explains the advocated system by explaining the diagram, which is puzzling at first sight, but which becomes clear and helpful on nearer acquaintance. Of course it is not to be expected that the recommendations will command general acceptance in detail. In our view, for example, too much reliance is placed at certain points upon examinations, and too little upon school reports. Again, while we agree that the essay and the arithmetic paper are in themselves the best existing test for the award of junior scholarships, we fear the reflex effect which this test is having upon the curricula of some primary schools, leading to the restoration of the old arithmetic fetish.

Our Kid; with other London and Lancashire Sketches.

By Canon P. GREEN. (2s. 6d. net. Edward Arnold.)

Some of us have recently made acquaintance with Canon Green as theologian, and now in these lively little sketches we get some insight into his work as social reformer in connexion with missions and boys' clubs. The sketches originally appeared in the *Manchester Guardian*, and they were well worth collecting in the form of a small book. The writer is manifestly a born social worker, the friend of the "under dog"—too faithful a friend to ignore the evil in him, but too good a practical psychologist to be unaware that the only hope lies in recognizing and developing the good. The Canon is a first-rate specialist in dealing with men and boys, and anyone interested in such work should read what he has to say.

The Child Welfare Movement. By Dr. JANET E. LANE-CLAYTON. (7s. net. Bell.)

Let no one take up this book who is not seriously interested in the subject and willing to take pains about it. Dr. Lane-Clayton means business. Nothing but a sense of the public's urgent need of instruction in this matter could have induced her to superimpose upon her arduous work at the head of the Hygiene and Household and Social Science Department of the King's College for Women the labour of producing this solid and valuable volume. Naturally she writes as a doctor, but as a doctor who has not forgotten that she is a woman. She knows welfare work as few do, so it is out of the fullness of knowledge that she gives three chapters on "The Child Welfare Centre." A mere layman like the present writer cannot follow her critically in her elaborate discussions of the work of infant visitors, and of the elaborate pre-natal work that appears to have to be done. But, judging by the parts where he is more at home—the various Government regulations, for example, and how to get work done in spite of them—he is convinced that pre-natal work is safe in her hands. The workmanlike nature of the book is indicated by the fact that, in addition to the 232 pages of text, there are no fewer than 89 small-print pages of appendixes. A sound and practical book.

A Day Continuation School at Work. By W. J. WRAY and R. W. FERGUSON. (8s. 6d. net. Longmans.)

This is one of those composite books that are becoming so popular in education. Twelve contributors give not their views merely, but their experience of continuation school work. There are two actual continuation schools concerned, and, since the curriculum is necessarily extensive, no single writer could do justice to it all. There is, further, the matter of sex to be considered, so it is fitting that there should be women contributors. Indeed, three out of twelve is perhaps hardly a big enough representation of the women's side. Certain of the matters dealt with are not special to the continuation school, and in some cases the treatment is not sufficiently differentiated from that found in a book for ordinary school teachers; but the editors no doubt feel that they have to provide a self-contained book that can be put into the hands of those preparing for or engaged in continuation work who have no other means of acquiring the common knowledge essential to all teachers. The great bulk of the volume, however, is specifically written to the address of the continuation school teacher, and gets home in a very effective way. Employers are not neglected, and "works schools" get the attention they deserve. Two appendixes supply rather useful information. The book contains forty pages of beautifully executed photographic and other illustrations, most of them useful and all of them interesting. As a record of what has been done, and as a source of suggestions of what may be done, the book deserves the attention of all interested in continuation work.

GEOGRAPHY.

Australian Meteorology. By Dr. G. TAYLOR. (12s. 6d. net. Clarendon Press.)

This fascinating book has been written by an Australian for Australians. It yet has a universal appeal owing to its freshness, on the one hand, and its application of the latest research results to Australian problems, on the other. Dr. Griffiths Taylor rightly

points out that meteorology—and, therefore, climatology—are of little import except as bare summaries of conditions at the earth's surface, unless and until the upper air has been thoroughly explored, and he gathers together and applies the pregnant results of such exploration. In view of the comparative scantiness of material, it is obvious that his conclusions are not necessarily final, but they are stimulating. The book is, at the same time, intensely practical. The solar-control model is an ingenious demonstration of the relationship between insolation and the main surface meteorological elements. The chapters upon "Work at a Small Station," "Winds and their Measurement," &c., illustrate this aspect of the work, and the sections on rainfall should prove useful to the farmer and pastoralist. Based upon lectures to the Commonwealth Flying School, the book is intended for, among other readers, candidates for university examinations.

Historical Geography of Britain and the British Empire. Book I. By T. FRANKLIN. (2s. net. Macmillan.)

This book is divided into three sections—namely, The Making of England, The Making of the Empire, and The Establishment of the Empire; it covers the period from B.C. 55 to A.D. 1815. Throughout the work the writer carefully explains the relation between geographical conditions and historical movements.

Compassing the Vast Globe. Vol. I: *Long Ago and Far Away.* By E. G. R. TAYLOR. (1s. 9d. net. Constable.)

Miss Taylor provides a series of descriptions of the conditions under which men live or have lived, such as the early inhabitants of Britain, Red Indians, Eskimos, Pygmies, and others. The writer knows what will interest little people and she also knows how to tell a story with effect. The book will therefore be found useful for reading in class.

"Philips' Model Geography."—*Africa.* Fourth Edition, Revised. (9d.)

This booklet of eighty pages contains a great deal of information, but it is mostly written in the style of the old-fashioned geographies. Some good descriptions are given—e.g. The Sahara and the influence of the desert on men; The Nile and the Temples of Upper Egypt.

Human Geography: The World. By J. FAIRGRIEVE and E. YOUNG. (3s. net. Philips.)

Descriptive pictures of world geography, with special reference to men and their environment, are provided here. Books such as these make geography a very attractive subject, and they also prepare the way for the formal geography lessons of the higher forms.

"Reason Why' Geography."—*England and Wales.* By T. W. F. PARKINSON. (2s. 9d. Collins.)

The writer successfully shows that the industries and occupations of the people depend largely on the physical structure of the country. Several paragraphs should be revised; Sheffield is described under the heading of the Trent basin and the Severn as a Welsh river. The text is clearly printed and is illustrated with many maps; diagrams which consist of names only are of little value (pages 46 and 55).

"Cambridge County Geographies."—(1) *Caithness and Sutherland.* By H. F. CAMPBELL. (2) *Kirkcubrightshire and Wigtownshire.* By W. LEARMONTH. (3s. 6d. net each. Cambridge University Press.)

These geographies conform to the general plan of the other volumes in this well known series. The chief features of each county are described in an interesting way and the texts are illustrated with numerous pictures.

HISTORY.

The Expansion of the Anglo-Saxon Nations. By SEVERAL CONTRIBUTORS. Edited by H. C. BARNARD. (7s. 6d. net. Black.)

This book embodies the novel and excellent idea of including the British Empire and the United States of America in a single survey. The two great Anglo-Saxon nations had a common history until the eighteenth century, and even after they were unhappily sundered they continued to advance along parallel lines; hence it is a useful and illuminating thing to study their development as a whole. The volume consists of six main parts written by six different writers, each of whom can speak with specialist authority. The editor provides a sketch of the undivided British Empire to 1713; Mr. A. E. Dorland, of Canada, takes up the story and carries it on to 1783. Then Mr. L. P. Gipson, of Yale University, deals with the United States of America. Mr. Yusuf Ali treats of India, Mr. J. H. Hofmeyr of British Africa, and Mr. T. Dunbabin of Australasia. The familiar complaint that "imperial history is written too exclusively from the point of view of the mother country" does not apply to this catholic compilation.

"The 'Evolution' Histories."—*Since Waterloo*. A Short History of Europe and of the British Empire, 1815-1919. By Dr. R. JONES. (9s. 6d. net. Constable.)

There are two methods of treating the history of recent times. One is to take the world, or at any rate Europe, as a whole, and to pay attention only to the great general movements that affected mankind at large. The other is to take the leading States of the world one by one, and to write a series of parallel histories of them. Dr. Jones has attempted a combination of the two, or a compromise between them. The main division of his book is chronological: he takes short periods, e.g. 1815-1828, 1828-1837, 1837-1848, in which distinctive movements are evident. Within these main chronological divisions he has geographical sub-sections according to a regular scheme. Hence, if you want to trace the history of a particular country, you consult the table of contents, and note the half-dozen or so places where a section of the story is told. Thus, Austria is dealt with as follows:—1815-28 (page 46), 1828-37 (page 79), 1837-48 (page 106), 1848-74 (page 185), 1875-1915 (page 249). It cannot be said that Dr. Jones's compromise is a complete success. His book resembles too much a patch-work quilt. The information is there, but it is cut up into fragments of various sizes that have no natural or organic connexion with those to which they are joined.

"Cambridge Handbooks for Teachers."—*The Teaching of History*. By E. L. HASLUCK. (8s. net. Cambridge University Press.)

Mr. Hasluck, himself an experienced specialist in the study and teaching of history, has produced, under Prof. J. W. Adamson's editorship, a book full of valuable suggestions to history teachers in schools. Mr. Hasluck is a supporter of the source method of instruction, but he does not appear here as a special pleader. With wide catholicity he presents the cases of the textbook method and the oral method, and considers how far each can be employed with effect. He succeeds, indeed, in giving a broad survey of the whole field, and there are few teachers who will not glean new ideas from his comprehensive pages. In a skilful introductory essay, which occupies one-fourth of the book, he discusses the preliminary questions: Why should history be taught? What sort of history should be taught? What methods should be used? What classification should be adopted? He then proceeds, in fuller detail, to treat of (1) the presentation of history; (2) the co-ordination of history with the other subjects of the school curriculum; (3) the formation of school libraries and museums; (4) pitfalls into which teachers of history are liable to fall. Finally, he presents a few specimen lessons and a brief bibliography of works on history teaching. The index is miserably inadequate—it ought to be multiplied by ten.

A History of British Socialism. Vol. II. By M. BEER. (15s. net. Bell.)

Mr. Beer's full and authoritative "History of British Socialism" was almost ready for the press when the war broke out in 1914. This event delayed the publication of the book, and also drove its author as an alien enemy from the country. Not until the conclusion of peace was he able to return to England, give the final revision to his work, and see it through the press. It is a remarkable achievement for a foreigner, even though twenty-one years of his life have been spent in London: for it is an original composition in the English language, written with a mastery of the tongue far superior to that possessed by the majority of natives. The first of the two volumes of this history was published last year. It dealt with medieval anticipations of Socialism and with the incipient movements of modern times down to the year 1834. The present volume begins with an account of Chartism—an account which, together with the recent studies of Mark Hovell and Julius West, should give something approaching finality to our knowledge of that abortive uprising. It then delineates and discusses Modern Socialism (1855-1920). There can be no doubt that this section, which is packed with new and first-hand information, is the one which will be most eagerly read. It is, of course, written from a sympathetic—indeed, strongly partisan—point of view. It covers with all too kindly hand the errors of Socialist leaders, the failure of Socialist experiments, and the conflicts of Socialist organizations. Nevertheless, it is indispensable for the information which it gives, and the reader has the satisfaction of feeling that whatever of good it is possible to say about Socialism is here said.

The Story of Our Empire. By P. R. SALMON. (3s. net. Harrap.)

This attractive little textbook is a topographical survey of the existing British Empire rather than a history. That is to say, it does not deal with the beginnings of English exploration and settlement, or recount those early enterprises which resulted in the founding of the American Colonies. The lost dominions of Britain are to Mr. Salmon as though they had never been. The plan is

different, and it has its advantages. He takes each member of the present Empire in turn—starting with Newfoundland, "our oldest possession"—and gives a rapid summary of its history and an account of the manner in which it became incorporated into the British dominions. The book, therefore, forms a useful supplement to such a chronological history as Mr. J. A. Williamson's.

MATHEMATICS.

School Dynamics. With Answers. By W. G. BORCHARDT. (In One Vol., 6s.; or in Two Parts, 3s. 6d. each. Rivingtons.)

The first part of this work contains sufficient for such examinations as the Cambridge Junior Local, while Part II includes all that is necessary for the Cambridge Senior Local, the Higher Mathematics for entrance to Woolwich, and other similar examinations. Examination of the book shows that the range of the course thus indicated includes all ordinary cases of the motion of a particle or rigid body when the acceleration, either linear or angular, is uniform. The introduction of rigid dynamics into an elementary course will be welcomed by a large number of teachers, for it enables them to bring their classroom problems into touch with some of the most characteristic features of the age in which we live—the age of machinery. The knowledge of a few fundamental principles regarding the dynamics of spin will enable a boy to take a far more intelligent interest in cycles, motors, or aeroplanes than otherwise he would be able to do. The text itself contains a judicious combination of theory and of instructions for practical work. The examples are entirely numerical, and both the absolute and gravitational system of units are employed. Students using this book should gain sound ideas of the subject.

"Cambridge Mathematical Series."—*Elementary Algebra*. By C. V. DURELL and G. W. PALMER. Part I. (4s. 6d. Bell.)

This elementary textbook is designed for classes where the greater part of the instruction is given orally. The explanatory part of the text is therefore brief, is put in dogmatic form, and consists chiefly of definite instructions and illustrative examples. A fuller discussion, intended for the use of the teacher, is contained in an Introduction, which is published separately. The first ten chapters contain the matter up to quadratic equations, which, in the opinion of the writers, it is indispensable that every boy, whether specialist or not, should acquire. The final chapter contains a fuller and more advanced treatment of some special topics, such as factors and equations. We are favourably impressed with the book. Its comparative brevity and clearness seem to make it particularly well adapted for general use.

Practical Geometry; Theoretical Geometry. By C. GODFREY and A. W. SIDDONS. (7s. net. Cambridge University Press.)

This book is intended to be a contribution to the solution of the problem of framing a suitable course of instruction in geometry. It is useless to deny that since Euclid was deposed there has been a considerable amount of anarchy in the realms of elementary geometry. The Board of Education Circular 711 has provided a rallying point for the establishment of some semblance of order, but the present writers wish to take a further step, as indicated by the following schemes:—

Practical Geometry.—Stage I: Introductory practical work.

Stage II: Intuitive treatment of a few fundamental propositions.

Stage III: A full treatment of the whole field of elementary geometry by methods sometimes formal, sometimes informal; an informal treatment of the simplest notions in solid geometry.

Theoretical Geometry.—Stage IV: A logical chain of propositions in Euclidean form.

The essential feature of their programme is the insertion of Stage III. In a brief notice it is impossible to discuss the pros and cons of the proposal; we can only point out that the advance to strict deductive reasoning will be still longer delayed, and that loose ideas regarding sequence may be acquired which will be difficult to eradicate at the later stage.

MODERN LANGUAGES.

Epochs of Italian Literature. By Prof. C. FOLIGNO. (3s. net. Clarendon Press.)

This small volume by the Serena Professor of Italian Studies at Oxford is a really remarkable achievement. Within a limited compass the author succeeds in marking out the main lines of literary development in Italy in language that is vivid and interesting, and does not suggest the textbook. The sense of conflict between material and spiritual issues, between foreign influences and national forces, between authority and freedom in life and thought, is implied throughout the book, and is seen to account for the vital (and occasionally the volcanic) character of Italian art. A very good bibliography and reference index add to the usefulness of the volume.

Cambridge Readings in Italian Literature.

Edited by E. BULLOUGH. (8s. net. Cambridge University Press.)

Mr. Bullough has given us, in this volume of "Cambridge Readings," a delightful and well chosen collection that reflects the personal taste of the editor. The book claims to give an *aperçu* of Italian literature of the nineteenth century, and the choice of specimens is characteristic of the literary sense of that period. Mr. Bullough has pointed out his own omissions, due partly to the difficulties of communication during the war. The book is one that, although thus confessedly incomplete in its scope, may stimulate the reader to enlarge his acquaintance with the authors included in it. To the twentieth-century mind the divisions into literature concerned with God, Nature, Italy, Life, and Thought are arbitrary and a little confusing. A truer picture of the development of Italian thought and life might have been gained by arrangement in chronological order. But, as we have already said, the personal note dominates the collection, and gives it its value as an anthology.

"Early Italian Literature."—Vol. I: *Pre-Dante Poetical Schools*. With Critical Introductions by Dr. E. GRILLO. (10s. 6d. net. Blackie.)

The appearance of the first volume of Dr. E. Grillo's "Early Italian Literature" is very welcome. No such complete and representative collection of specimens of pre-Dante poetry has yet appeared. The value of the collection is greatly enhanced by a full and scholarly introduction, and readers of early Italian lyric verse will, we think, admit Dr. Grillo's claim for its freshness and originality. He is inclined to dispute the view, held by the last generation of German critics, that there was a marked influence of Provençal upon the matter and manner of the Early Italians; and shows, in the case of Pugliese and others, how closely connected their work was with local popular poetry. In tracing the development of language, Dr. Grillo rightly lays considerable stress upon the psychological elements that help to mould speech. His book is in line with modern criticism, and is characterized by his usual thoroughness, sense of proportion, and grasp of the meaning of literature.

MISCELLANEOUS.

Household Arts for Home and School. By Prof. A. M. COOLEY and Prof. W. H. SPOHR. In two volumes. (9s. net each. Macmillan.)

These volumes are intended for use in elementary schools or junior high schools in the United States, but we fear their price will prevent their introduction in similar schools in this country. Nor do we think it would be possible, in view of the number of subjects usually included in the curriculum, to find time to study the miscellany of subjects with which the authors deal. The first volume, which runs to 433 pages, is concerned with the family budget, home furnishing, the selection of clothing, the care of the baby, and textiles and sewing. The second volume, of 435 pages, includes sections dealing with the care of the home, the selection of food, cooking and serving, laundering and hospitality. The books are attractively and profusely illustrated, many of the pictures being coloured, and the descriptive text, though somewhat diffuse, is of a kind to appeal to girls. The volumes may be recommended to the attention of teachers of domestic subjects in schools and technical institutes, who will find much information about American practice, prices, and tastes, as well as many hints as to procedure suggested by the experience gained in the schools of the United States.

RELIGIOUS KNOWLEDGE.

"The Beginnings of Christianity."—Edited by Dr. F. J. F. JACKSON and Dr. K. LAKE. Part I: *The Acts of the Apostles*. Vol. I. (18s. net. Macmillan.)

This substantial volume is the first of a series of three which has been planned by the editors. It is concerned with "Prolegomena," and contains a series of studies dealing with the Jewish, Gentile, and Christian backgrounds of primitive Christianity. The editors say in the preface:

"The great literary achievement of the last fifty years of New Testament scholarship was the discovery and general solution of the synoptic problem. It is the task of this generation to translate these results into the language of the historian; to show how literary complexities and contradictions reveal the growth of thought and the rise of institutions. Though much remains to be done, the general outline can already be seen. It is becoming increasingly certain that Christianity in the first century achieved a synthesis between the Græco-Oriental and the Jewish religions in the Roman Empire. The preaching of repentance and of the Kingdom of God, begun by Jesus, passed into the sacramental cult of the Lord Jesus Christ. But the details are complex and obscure. What were the exact elements in this synthesis? How was it effected? The study of the Acts is 'the necessary preliminary of these questions.'

A second volume will deal with the literary phenomena of the Acts; a third with the exegesis of the text."

A large part of the present volume has been written by the editors, who are responsible for essays devoted to "The Background of Jewish History," "Varieties of Thought and Practice in Judaism," and "The Dispersion." They also are entirely responsible for the section on Primitive Christianity ("The Public Teaching of Jesus," "The Disciples in Jerusalem and the Rise of Gentile Christianity," "Christology," &c.). Mr. Montefiore contributes an interesting and well written essay on "The Spirit of Judaism," where, however, the historical development of the thought is not always clearly brought out. Mr. H. T. F. Duckworth writes a valuable essay on "The Roman Provincial System," and there are contributions from Prof. C. F. Moore. The volume, though rather unequal in treatment, is an important contribution.

The Pastoral Epistles. With Introduction, Text, and Commentary. By Dr. R. ST. J. PARRY. (20s. net. Cambridge University Press.)

Dr. Parry has produced an admirable edition of the Pastoral Epistles, for which serious students of the Greek Testament will be grateful. It is a real contribution to the literature of the subject with which it deals, and may fitly rank with the best of the larger commentaries, produced by English scholars, on New Testament books. The commentary, which is planned on an ample scale—notes in double column being printed below the Greek text—is preceded by an elaborate Introduction, which embraces over 150 printed pages. Here the difficult problems that arise in connexion with the Pastorals are fully discussed. The conclusions reached by Dr. Parry are somewhat conservative in character; but more radical solutions are fully dealt with before his own solutions are presented, and it must be acknowledged that he sets forth the latter in a very persuasive manner. Our editor says:

"We may conclude, then, that we have good historical evidence, independent of any assumption of the genuineness of the Pastoral Epistles, by the end of the first century, that St. Paul had been released from his imprisonment after two years' confinement in Rome; that he had carried out his purpose of preaching in Spain, and perhaps in Gaul; that he had revisited the scene of his earlier labours in Asia Minor, Macedonia, and Greece; and that he had spent some time in Crete. It follows that there is no historical reason for denying the genuineness of the Epistles."

The date assigned to St. Paul's martyrdom is 67, and the period of freedom (after the first imprisonment) is fixed between the years 62 and 67. But the most formidable difficulties, that beset the genuineness of these Epistles, undoubtedly lie "in the field of language and of ideas," and full consideration is given to this aspect of the matter in a separate chapter. Other topics dealt with include discussions of Timothy's and Titus's office, organization, false teachers, doctrinal character, &c. The whole volume is important.

SCIENCE.

Thermodynamics for Engineers. By Sir J. A. EWING, K.C.B. (30s. net. Cambridge University Press.)

Whilst this book was written primarily for engineers, it will be found to be of service also to students of physics who desire to obtain a working knowledge of elementary thermodynamics from the physical point of view. In the early part of the book the reader is introduced to first principles and their interpretation in practice, presented in a non-mathematical form, and thus becomes familiar with the notions as physical realities. In the later portion of the volume will be found a mathematical discussion of the general thermodynamical relations, and their application to characteristic equations of fluids—in particular, to steam—following Callendar's method. The internal energy and specific heat of gases are dealt with in the chapter on internal combustion engines; and later appears an appendix giving an account of the molecular theory. Thermodynamics is admitted to be a very difficult subject to the average student of engineering. Most engineers are acquainted with the same author's "Steam Engine," in which appears an admirable and lucid exposition of the thermodynamics of the steam engine, and will welcome the more complete treatise before us. The clear explanations of difficult principles, which are characteristic of Ewing's work, make the perusal of this volume a pleasure, and cannot fail to give the student a sound working knowledge of thermodynamics. In addition to the discussion of first principles, there are chapters on the properties of fluids, the theory of the steam engine, the theory of refrigeration (the latter being particularly valuable), jets and turbines, and internal combustion engines. The chapter on general thermodynamic relations contains the deduction of no fewer than fifty-six equations. The effects of surface tension on condensation and ebullition are treated in an appendix, and abbreviated tables of the properties of steam, based on Callen-

(Continued on page 638.)

OVER THREE MILLION CHILDREN EVERY DAY

are using the fascinating Underwood Stereographs as an invaluable help in the study of GEOGRAPHY, BOTANY, BIOLOGY, ZOOLOGY, and KINDRED SUBJECTS.

THERE'S A REASON!!!

Underwood Stereographs are different to all other Visual Methods—they train children to observe; develop the memory, and are comparable in educative value to real travel experiences.

ARE YOU USING THIS VISUAL METHOD IN YOUR SCHOOL?

If not, we shall be pleased to send you full details.

The College is both Day and Residential.

PROSPECTUS AND SOLICITOR-GENERAL'S SPEECH POST FREE.

dar's equations, appear at the end of the volume. Students who are familiar with the later editions of Sir Alfred Ewing's "Steam Engine" will note with pleasure that the British system of units with the Centigrade scale of temperature is employed generally in the present volume. The book can be recommended with confidence to all students of engineering and physics.

"The New Teaching Series."—*Applied Botany*. By G. S. M. ELLIS. (4s. 6d. net. Hodder & Stoughton.)

"The botany which is of interest and practical value," say the publishers of this volume, "has been, unhappily, distinct from the botany of schools. This book provides a remedy." Such an announcement shows ignorance of modern botanical teaching—which succeeds quite often in being both interesting and practically useful—and it implies that Mr. Ellis's treatment of the subject is on essentially novel lines. The book certainly gives rather more than the usual proportion of space to such matters as soils and manures, fungoid and insect pests, and variation and heredity, but it is not more distinctively "practical" in character than many textbooks in common use in schools, and it is not concerned to any marked extent with the "applications" of botany. It is none the less sound and workmanlike, simply and interestingly written, and it keeps the essentials of the subject in the foreground. The clear descriptions of the main activities of plants and of the manner in which they are modified by outside conditions make the book very suitable for use in junior classes in schools and for general reading. The illustrations are rather crude, and Fig. 6 is wrongly described.

Wonders of Insect Life. By J. H. CRABTREE. (6s. net. Routledge.)

This book gives entertaining accounts of the habits, transformations, and structure of representatives of the principal orders of insects. It will appeal to young naturalists no less by its vivacity of style than by the beautiful photographic illustrations which embellish it. In the account of house flies we miss any reference to the part these insects play in spreading disease. It is rather a pity that no attempt is made to enable the reader to distinguish the various orders of insects at sight, and that the author is not more precise in his use of the words "family" and "species." In the table of contents the water boatman and water scorpion are wrongly included in the Coleoptera. We hope that a demand for a second edition will provide an opportunity to rectify these slips.

The Life and Work of Sir Jagadis C. Bose. By Prof. P. GEDDES. (16s. net. Longmans.)

The account which Prof. Geddes gives here of the life, struggle, and achievement of the eminent Bengali physicist will appeal to all who are interested in science, and to students of botany in particular. Not only is it an inspiring story of persistent and unswerving labour in scientific research; it also describes and explains in simple language a series of experiments and results of absorbing interest and importance. Sir J. C. Bose's discovery that even inorganic substances possess a sensitiveness, shown by electric response, which can be enhanced by stimulants and abolished by poisons, led him to novel investigations on the responses of plant and animal tissues. Having devised instruments capable of measuring and registering time intervals of the thousandth part of a second, and of magnifying plant movements a hundred million times, he was able to show that plants promptly respond to various changes of environment which are too slight to be perceptible by, or are altogether outside the range of, our own senses. By this means, the varying rate of growth of plants under different treatment may be instantly recorded, so that agricultural experiments which would have taken months can now be carried out in a few minutes. The illustrations include portraits and explanatory diagrams of apparatus used in these and other researches which are described.

The End of the World. By J. McCABE. (6s. net. Routledge.)

Under this somewhat sensational title Mr. McCabe has compiled a readable account of certain aspects of modern astronomy. The menace of future ice ages, the chances of collision, and the "dying" of the sun are considered in turn as conceivable solutions of the problem, while later chapters lead up to a final section on the "death" of the universe itself! All this the "inexpert reader," for whom the book is intended, will find interesting. The style suggests a popular lecture; in print, its effect is at times rather pretentious. While finding much to approve of in the book, a working astronomer, reading between the lines, will probably doubt whether Mr. McCabe has understood fully all the questions on which he expresses his opinion. The volume, however, can scarcely fail to stimulate its readers' imagination and whet their appetite for scientific astronomy. It contains numerous excellent illustrations.

THE "POSITIVE" ORGAN IS IDEAL FOR COLLEGES AND SCHOOLS.

It represents the finest value offered in Organ Building, and is a real pipe organ, not an American reed organ.

Over 900 supplied, including many Cathedrals and Colleges all over the world.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March-April at all Centres, and in the London district and certain Provincial Centres in November-December as well as in March-April.
Entries for the November-December Examinations close Wednesday, October 13th, 1920.
Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.
- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions, conducted by one Examiner. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.
The School Examinations are held throughout the British Isles at three periods, viz., October-November, March-April, and June-July.
Entries for the October-November Examinations close Wednesday, October 6th, 1920.
Full particulars of the School Examinations, including the **General Inspection of School Music** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

GRAMMAR OF MUSIC.
RUDIMENTS OF MUSIC.
HARMONY.
COUNTERPOINT.
PIANOFORTE.
ORGAN.
VIOLIN.

VIOLA.
VIOLONCELLO.
DOUBLE BASS.
HARP.
WIND INSTRUMENTS.
SINGING.

The Board offers annually **Six Exhibitions**, tenable for two or three years at The R.A.M. or The R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Syllabuses A and B for 1920 or for 1921, Entry Forms, Theory Papers set in previous years, and any further information can be obtained on application to the Secretary, 14 & 15 Bedford Square, London, W.C.1.

CLASS BOOKS ON MATHEMATICS and MECHANICS

PUBLISHED AT

The University Tutorial Press.

Mathematics.

The Tutorial Arithmetic. By W. P. WORKMAN, M.A., B.Sc., late Head Master of Kingswood School, Bath. *Third Edition.* (With or without Answers.) **6s. 6d.**

An exhaustive scientific treatise on Arithmetic containing a thorough treatment of Arithmetical theory, full explanations of all matters connected with commercial arithmetic, and a comprehensive collection of exercises and problems.

"This book takes first place among our textbooks in arithmetic. Whether we regard the scope, the quantity and quality of the examples, the arrangement, the attention to theory, the avoidance of the obsolete, or the introduction of the newest and the best, the conclusion is unavoidable that no other single book can compete with this one."—*Schoolmaster.*

The School Arithmetic. By W. P. WORKMAN, M.A., B.Sc. *Second Edition.* (With or without Answers.) **5s.**

Those portions of *The Tutorial Arithmetic* dealing with the higher theory and all over-difficult problems are omitted. In the second edition chapters on Logarithms and on Graphs have been inserted.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

School Algebra. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. (With or without Answers.) **7s. 6d.**

This book provides a course of Algebra as far as the binomial theorem for positive integral indices, and includes a full treatment of those subjects which are especially characteristic of modern teaching.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education.*

Junior Algebra. By A. G. CRACKNELL, M.A., B.Sc., F.C.P., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**

The authors have endeavoured to train the pupil in thinking for himself, to make clear the reason and the need for each new rule or process, and to provide sufficient practice in the various rules to make their use automatic.

"Maintains the high level of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion of the work is particularly good."—*Journal of the Assistant Masters' Association.*

The Tutorial Algebra. Advanced Course. By WILLIAM BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. *Fourth Edition.* **9s. 6d.**

An advanced course in Algebra containing all that is usually required for a Pass Degree.

"We strongly recommend the book to the attention of mathematical teachers. It is throughout an admirable work."—*The Journal of Education.*

Coordinate Geometry. Containing an elementary treatment of the Straight Line, Circle, and Conic. By J. H. GRACE, M.A., F.R.S., Fellow of St. Peter's College, Cambridge, and F. ROSENBERG, M.A., B.Sc. **6s. 6d.**

"This volume offers some attractive features. In our judgment the two which are most noteworthy are (1) the return to Salmon's mode of treatment, and (2) the important place assigned to the tracing of curves."—*Oxford Magazine.*

The Right Line and Circle (Coordinate Geometry). By Dr. WM. BRIGGS and Dr. G. H. BRYAN. *Third Edition.* **5s.**

"An admirable attempt on the part of its authors to realize the position of the average learner."—*Educational Times.*

Mechanics.

The Tutorial Dynamics. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. *Second Edition.* **5s.**

This textbook deals thoroughly with all those portions of the subject which can be satisfactorily treated without the use of Analytical Geometry or the Calculus. Special attention has been given to explanations of theory. Separate chapters are devoted to Linkages and Planetary Motion.

"The principles are laid down most clearly, and algebraic skill is not confounded with knowledge of Mechanics."—*Oxford Magazine.*

"A clear and lucid introduction to dynamics."—*Schoolmaster.*

"This is an excellent manual. The subject is very successfully treated. The chapters on mass, momentum, and weight are very full and clear."—*Scottish Educational Journal.*

The Tutorial Statics. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. *Third Edition.* **5s.**

Like the preceding book, this volume does not assume a knowledge of Analytical Geometry or the Calculus. Special attention has been given to explanations of theory, and the treatment of Coplanar Forces is unusually thorough.

"Written with commendable clearness."—*Educational Times.*

"The treatment is clear, sound, and interesting."—*The Journal of Education.*

"This book is thoroughly practical. The principles and demonstrations are remarkably clear."—*Schoolmaster.*

Intermediate Hydrostatics. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. **5s.**

This work contains as much Hydrostatics as can be conveniently learned without the use of the Calculus.

"Undoubtedly one of the ablest and most attractive books on the subject."—*Scottish Educational Journal.*

"After working through the book a student's knowledge ought to be thoroughly sound."—*Schoolmaster.*

Matriculation Mechanics. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. *Third Edition.* **5s.**

The purpose of the book is to give beginners a thorough grounding in those parts of Statics and Dynamics which can be treated without assuming any knowledge of Trigonometry.

"It is a good book—clear, concise, and accurate."—*The Journal of Education.*

"Affords beginners a thorough grounding in dynamics and statics."—*Knowledge.*

"Altogether it is an excellent book."—*School Guardian.*

Matriculation Hydrostatics. (Contained in *Intermediate Hydrostatics*.) By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. *Second Edition.* **3s.**

"An excellent textbook."—*The Journal of Education.*

"The diagrams and illustrations are all very practical. The text is written so as to give a clear and systematized knowledge of the subject."—*Schoolmaster.*

First Stage Mechanics of Solids. By F. ROSENBERG, M.A., B.Sc. *Fifth Edition.* **3s.**

The number of formulae introduced has been confined within the narrowest limits, and special stress has been laid on the graphical method of solving problems.

"The typography of the book, the treatment of the subject, and the graduation of the examples are admirable. The work will be found a valuable textbook for students preparing for examinations in which the subject is required."—*Chamber of Commerce Journal.*

First Stage Mechanics of Fluids. By G. H. BRYAN, Sc.D., and F. ROSENBERG, M.A., B.Sc. *Second Edition.* **3s.**

This book is well adapted for its purpose. The principles of the subject and experiments for their verification are well explained, and clear descriptions are given of the usual instruments and apparatus."—*Mathematical Gazette.*

"The book seems to be excellently adapted to its purpose, and to cover just the right amount of ground."—*Educational Times.*

Joint Agency for Women Teachers

OAKLEY HOUSE,
14, 16, & 18 BLOOMSBURY ST., LONDON, W.C.1.
(Under the management of a Committee appointed by
the Teachers' Guild, College of Preceptors, Head
Mistresses' Association, Association of Assistant
Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose
of enabling Teachers to find work WITHOUT
UNNECESSARY COST. All fees have therefore
been calculated on the LOWEST BASIS to cover
the working expenses.

No Registration Fees are charged to Members of
the above Associations, and their commissions are
reduced.

Hours for Interviews (during August)—

11.30 a.m. to 1 p.m., and 3 to 4 p.m.

Saturdays, 11.30 a.m. to 12.30 p.m.

When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

THE attention of Candidates is
drawn to the ordinary and Honours Diplomas
for Teachers, which are strongly recommended as
suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Bedford, Bel-
fast, Birmingham, Blackburn, Brighton, Bristol,
Cambridge, Cardiff, Croydon, Dublin, Edinburgh,
Exeter, Glasgow, Hull, Leeds, Liverpool, London,
Manchester, Middlesbrough, Newcastle-on-Tyne,
Norwich, Nottingham, Oxford, Plymouth, St.
Andrews, Sheffield, Southampton, and several other
towns.

Information regarding the Examinations may be
obtained from the SECRETARY, L.L.A. Scheme, The
University, St. Andrews.

The Association of University Women Teachers.

108 VICTORIA STREET (1st floor), S.W.1.
Recommends Teachers and Lecturers. Teachers,
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Mrs. B. BROUGH. Subscription 5s. per
annum. Tel.: Vic. 2483.

The Scholarships will be tenable during continuance at the School or till election to a Senior Scholarship. One or more of these Scholarships will be awarded without reference to Greek.

For details apply—

MAJOR T. CARSON, Secretary,
CHARTERHOUSE,
GODALMING.

CRANBROOK SCHOOL, KENT.

Head Master, Rev C. F. PIERCE, M.A.—EXAMINATIONS for ENTRANCE SCHOLARSHIPS and EXHIBITIONS are held in March, June, and November. For particulars apply to the HEAD MASTER, The School House, Cranbrook, Kent.

SCHOLARSHIPS.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College and Manufacturing Works are held annually in April. For particulars apply to ACTING SECRETARY, 66 Southampton Row, W.C.1.

FRAMLINGHAM COLLEGE, SUFFOLK.

PUBLIC SCHOOL, Incorporated by Royal Charter. Head Master: F. W. STROCKS, M.A.

Inclusive Fees, £57 to £66 per annum. Modern Laboratories and Workshops.

EXAMINATION for ENTRANCE SCHOLARSHIPS in March.

Illustrated prospectus and full particulars on application to the HEAD MASTER or the SECRETARY.

HIGHGATE SCHOOL.

The Scholarship Examination will be held on November 18 and 19, when 5 FOUNDATION, 3 GLADSTONE (Boarders only), and 4 BOARDING SCHOLARSHIPS tenable with the former will be awarded. The Scholarships are of value £60-£20 p.a. Application to the HEAD MASTER by November 12.

Not classics in chief nor Science alone, but the adaptation of a boy's work to his powers and needs, as these become manifest."

KENSINGTON HIGH SCHOOL (G.P.D.S.T.)

MUSIC TRAINING DEPARTMENT.

Admission in September, January, and May.

THREE SCHOLARSHIPS awarded annually.

For information apply to the HEAD MISTRESS, Kensington High School, St. Alban's Rd., Kensington, W.8.

KING'S SCHOOL, CANTERBURY.—ENTRANCE and KING'S SCHOLARSHIPS. Some FIFTEEN SCHOLARSHIPS each June and November. For particulars apply to Head Master—A. LATTER, M.A.

LADY MARGARET HALL, OXFORD.

—The following Scholarships will be offered at an Examination to be held in March, 1921:—a JEPHSON SCHOLARSHIP of £70 a year, only given to candidates who can prove their need of pecuniary aid; a SCHOLARSHIP of £50 a year; and the MARY TALBOT SCHOLARSHIP of £40 a year. One or more EXHIBITIONS will also be offered should candidates of sufficient merit present themselves. The Scholarships and Exhibitions are tenable for three years during residence.

NEWMHAM COLLEGE.—NINE

SCHOLARSHIPS, one of £60, and others of £50 and £35, are offered in March on the results of a joint examination with Girton College. A certain number of EXHIBITIONS may also be awarded. Particulars can be obtained from the PRINCIPAL.

SEDBERGH SCHOOL

THE Examination for Ten ENTRANCE SCHOLARSHIPS and EXHIBITIONS will be held during May or June, 1921, in London and Sedburgh simultaneously. Candidates must be under 14 years of age on January 1st, 1921.

For further information apply to—THE BURSAR, Sedburgh School, Yorkshire.

SOMERVILLE COLLEGE, OXFORD.

—The following SCHOLARSHIPS will be awarded in March 1921, on the results of an examination beginning on March 15th.

A Mary Ewart Scholarship of £80 for 3 years,
A Clothworker's " " £60 "
A Gilchrist " " £50 "

together with one or more Exhibitions of not less than £20 a year. Full particulars may be obtained from the PRINCIPAL or VICE-PRINCIPAL.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships and Exhibitions, varying from £50 to £15, is held annually in May. General knowledge is required in preference to specialization in one subject. Exhibitions also awarded on the Common Entrance Examinations.

Further details from—

S. M. TOYNE, M.A., Head Master.

ST. JOHN'S SCHOOL, LEATHERHEAD.

—In addition to sons of living clergy elected on the Free Foundation, Supplementary Foundationers (sons of living clergy only) are received at the annual fee of 40 guineas. The School is also open to sons of Clergy or Laymen paying full fees, viz., Clergy 80 guineas, Laymen 80 guineas per annum. Day-Boys 33 guineas per annum. Modern School buildings for 240 boys. Boys prepared for the Universities, Army and Civil Service Examinations, &c. Leaving Scholarships. One or two Albany Scholarships awarded each year. Also three Entrance Scholarships, value £40, £30, and £20 per annum. Scholarship examination for 1921 on the first Wednesday in July; entries close the last day of June. For Prospectus, &c., apply to the Head Master, the Rev. E. A. DOWNES.

WELLINGTON COLLEGE.

Seven OPEN SCHOLARSHIPS, annual value £50 each (which may be increased to £80 in cases of need), and one ROBERT HENRY WENTWORTH HUGHES SCHOLARSHIP, of the value of £45, will be offered for competition in November next.

Two of the open scholarships will, under certain conditions, be restricted to boys whose fathers have given their lives for their country.

Candidates must not be 14 on December 31st, 1920. The examination will be held at Wellington College on November 9th and two following days.

For full particulars apply to THE BURSAR, Wellington College, Berks.

WEYMOUTH COLLEGE.

SIX SCHOLARSHIPS for CLASSICS or MATHEMATICS,

of the value of £20 downwards, and open to boys between twelve and fourteen.

are offered annually for
Competition.

Next Examination will be in June, 1921.

For Prospectus and other information apply to the HEAD MASTER.

WORCESTER CATHEDRAL KING'S SCHOOL

ANNUAL SCHOLARSHIP EXAMINATION.
November, 1920.

KING'S SCHOLARSHIPS of the

value of £18. 18s. per annum, HOUSE SCHOLARSHIPS of £15, and GOVERNORS' EXHIBITIONS (tenable with King's Scholarships) will be awarded in the Public Schools Common Entrance Examination in November.

Scholarships may be awarded for excellence in either Classics, Mathematics, or Modern Languages. Candidates must be under 15.

Applications for entry forms must be made before November 1st to the Head Master,

Rev. C. CREIGHTON,
King's School,
Worcester.

PANORAMIC SCHOOL GROUP PHOTOGRAPHS

Greatly Superior to Ordinary Photographs

PANORA LTD 60, DOUGHTY ST. LONDON, W.C.1.

PANORAMIC GROUP SPECIALISTS

Truman & Knightley

SCHOLASTIC AGENTS LTD

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Schools.

Assistant Masters and Tutors.

This department is under the personal direction of **Mr. JAMES HEARD, B.A.** (of Westminster and Trinity College, Cambridge).

Assistant Mistresses.

The work of this department is divided into four groups, each under a trained Assistant, so that the requirements of each client may receive individual attention.

Lady Matrons, Housekeepers, & School Secretaries.

This department is under the personal direction of a Trained Lady Superintendent.

THERE IS NO CHARGE FOR REGISTRATION, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Transfer of Schools and Partnerships.

This department is under the personal direction of **Mr. TRUMAN**, who has had a wide experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to give sound advice and assistance to those seeking to buy or sell Schools and Partnerships.

NO CHARGE IS MADE TO PURCHASERS.

All communications and inquiries are treated in the strictest confidence.

Offices : 158-162 Oxford Street, London, W.1.

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 4440 (2 lines).

A SELECTION OF CLASS BOOKS ON MATHEMATICS, CHEMISTRY, AND PHYSICS FOR SECONDARY SCHOOLS.

Mathematics and Mechanics.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., F.C.P., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 7s. 6d.

"The author has brought the work into closer touch with intelligible calculations, and, at the same time, gives a clear account of the elements of algebraic theory."—*Schoolmaster*.

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 6s. 6d.

"As a school textbook this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette*.

Preliminary Arithmetic. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. 3d. With Answers, 2s. 6d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

Arithmetic, The Junior. By R. H. CHOPE, B.A. With or without Answers. Third Edition. 4s.

"No better Arithmetic for school work has come into our hands."—*Scottish Educational Journal*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. This edition of the *School Arithmetic* covers the Senior Locals Syllabus, and is amplified by a large selection of examples arranged in Graduated Examination Papers. 4s. 6d.

"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World*.

Arithmetic, Rural. By A. G. RUSTON, M.A., B.Sc. 5s.

"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 4s.

"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. (New and enlarged edition). 6s.

"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 5s.

Covers fully the syllabus for London University Matriculation.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 3s.

"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical textbook and the tendency to loose reasoning of the practical manual. In this he seems to have succeeded."—*The Journal of Education*.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. 1s. 9d.

"The explanations are remarkably clear."—*Secondary Education*.

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Dr. G. H. BRYAN. Second Edition. 3s.

"The diagrams and illustrations are all very practical."—*Schoolmaster*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 4s.

Mechanics, Matriculation. By Dr. WM. BRIGGS and Dr. G. H. BRYAN. Third Edition. 5s.

"Affords beginners a thorough grounding in Dynamics and Statics."—*Knowledge*.

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 4s.

"The examples given are numerous in each chapter, the diagrams and the arrangements practical."—*Secondary Education*.

Botany, Chemistry, Physics, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. 4s.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, Senior. By FRANCIS CAVERS, D.Sc. 6s. 6d.

"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purposes underlie the manifold variations which plants assume."—*Nature*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 6s. 6s.

"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian*.

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. 4s. Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. 3s. ADVANCED COURSE. 1s. 9d.

"The calculations which are inseparable from chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge*.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 3s.

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 4s. 6d.

"The information is accurate and up to date."—*The Journal of Education*

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc.

Sixth Edition, Revised and Enlarged. 4s.
"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. 5s.

"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.

Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. 2s. 3d.

"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Scottish Educational Journal*.

Science, Junior Experimental (Physics and Chemistry).

By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 4s.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 6s.

"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature*.

Sound and Light, Junior. By JOHN SATTERLY, D.Sc., M.A. 4s.

"Reaches a high standard, with plenty of practical work."—*Guardian*.

OCCASIONAL NOTES.

DISCUSSING "The Place of the Universities in National Life" in his address to the Education Section of the British Association, the President of the Board of Education dealt with a subject of particular interest. The ideal embodied in the Act of 1918 is to establish a system of public education which shall afford an open road for all persons capable of traversing it. Mr. Fisher rejoices that 25,000 ex-service men are now undergoing some form of higher education in universities and colleges with the assistance of Government grants, and he claims that, in the majority of cases, the students are the children of parents who, without this special State assistance, would never have contemplated a university career for their sons. Provided the previous education of the students has been sufficient, and there is ground for believing that they possess the ability to profit by admittance to what the President terms "the charmed circle," the experiment will no doubt be justified. But, in proposing "that universities should play a much larger part in the life of the people than historical accidents have hitherto assigned to them," it may be hoped that there will be no dilution of academic standards. In these days of many words and philanthropic intentions there is need for educational institutions of all types to cherish a clear conception of their functions and to concentrate upon the particular activities for which they are best fitted. We are of opinion that, whether by historical accident or otherwise, the part of the universities in the life of the people in this country is already intimate and productive. They are centres of learning. It is their privilege to encourage the pursuit of knowledge, to kindle and to sustain the spirit of scholarship and investigation; their sons and daughters are drawn from all ranks of society, and are to be found in positions of responsibility and of influence in every community.

THE President looks to the universities to supply a larger proportion of its students for the service of teaching, and, by means of special courses for selected teachers of both sexes, to extend their activities. More particularly he urges the universities to realize that, in the great field of adolescent education represented by continuation schools, they have a new opportunity of exercising wide and beneficial influence over the educational developments of the country. He suggests that, here and there, university institutions might make themselves responsible not for the maintenance, but for the instruction given in continuation schools. We anticipate that effect may be cheerfully given to all these possibilities if adequate financial provision, both for the institutions and the individuals concerned, is forthcoming. A similar consideration regulates the work of the universities in the sphere of adult education by means of extra-mural lectures and classes. The President paid a well deserved tribute to the system of university extension lectures. The movement was started nearly fifty years ago, and its record is an admirable one. If the service it renders cannot be correctly described as the extension of university teaching, but rather as local lectures given by members of the university, it is none the less a valuable stimulus to intellectual interests, and hitherto the work has been conspicuous for the merit of paying its way with very little, if any, assistance from Government grants or local rates.

IT was inevitable that sooner or later the growing cost of maintaining the service of education would have to be more equitably divided between the Government and the local authority. The old plan of fixed grants and a balance of rapidly increasing expenditure, the whole of which had to be extracted from the pockets of the rate-payers, was obviously unfair. Its only merit was that it tended to promote economy. While, however, the financial partnership between the Government and the local authorities, in so far as those who call the tune must now pay a reasonable share of the remuneration of the piper, is satisfactory, there remain serious anomalies in the incidence of education rates. Mr. B. S. Gott, one of the members of a deputation from the Association of Education Committees, told the President that among the fourteen education authorities in the County of Middlesex the rates varied from 1s. 6d., the lowest, to 6s. 1d., the highest. In neighbouring authorities like Acton and Ealing, the rate was 3s. in one area and 1s. 7d. in the other. In a street on the boundary of two districts, the rate was 6s. 1d. on one side and 1s. 7d. on the other. There is no doubt that under the present system the poorer districts in the country are penalized. The formula upon which the grants are calculated takes into account, to some extent, the produce of the local rate. But, as Sir George Lunn said, in one town the produce of a penny rate is 1s. 6d. per child, and in another 7s. 6d.

INTO the question of anomalies in local rating, due to a variety of causes, the Board of Education may, not unreasonably, decline to enter. There are, however, serious objections to the regulations under which grants are now made, more particularly in regard to higher education. Sir George Lunn said, and we assume he knows, that there are no fewer than forty-four different sets of

regulations under which grants might be claimed, and Mr. Gott deplored the fact that directors of education had to sit down and calculate which of the different sets of regulations they should comply with in order to secure not the best educational results, but the highest grants. Another speaker instanced cases where secondary schools now receiving £3,455 and £6,800 respectively would, if recognized as central schools, each at once become entitled to over £11,000 a year. The Association of Education Committees made out a good case for the appointment of a special committee to consider the adjustment and consolidation of imperial grants for education.

IT has been a matter of common knowledge that the fees paid by students at universities did not cover the cost of their education. But it has been brought home to the public once more by the decision of University College, London, and of the University of Liverpool, to raise their fees by about 30 per cent. In an interview, the Provost of the former is reported to have said that before the war the fees of students paid only 38 per cent. of the expenses of the college, and that at the Universities of Manchester and Birmingham the percentage was considerably less. It is a moot point if the students who pay but a quarter or a third of the price of the teaching they receive value it at any higher figure. The English, being a commercial nation, are apt to value a thing at what it costs them. While there should be as many scholarships as possible for the clever, but poor, scholar, it seems wrong that nearly half the cost of higher education should be paid by the tax-payer or rate-payer. For most of those who go to universities are perfectly well able to pay for themselves, and they should not trade on the self-sacrifice of the lecturers and demonstrators, who are paid a wage at which a miner would jeer. And while university fees should be raised, so should the fees of examinations. Scarcely any work is so dreary and distasteful as the marking of the papers of a pass examination. Before the war a conscientious examiner could make five or six shillings an hour by it, and many teachers were glad to supplement their inadequate salaries in that way. But now that five shillings is worth but half-a-crown, it is putting a heavy strain on the conscientious one not to hurry through his work, and do twelve papers in the hour where before he did six.

THE Workers' Educational Association has issued an important report, embodying recommendations for the consideration of all who are interested in the problems of adult education, especially for working people, based upon the final report of the Adult Education Committee of the Ministry of Reconstruction, issued in July 1919. The report is prefaced by an introduction setting forth a declaration of policy approved by the W.E.A. Central Council at its annual meeting of July 24 last, which is, in the main, a claim that this special problem of working-class adult education shall be organized, and largely controlled, by voluntary agencies which possess the confidence of working people. It calls for the organization and administration of the several subjects of study, and of the classes relating thereto, at the hands of voluntary organizations, such as the trade unions, the co-operative societies, the working men's clubs, &c., in association with such

educational bodies as the Labour College, the Ruskin College, and the W.E.A., with a view to their active interest in adult education, and in order to stimulate the demand for it. It is premised that the principal function of any public or official body, like the Board of Education, the local education authority, or the university providing the necessary funds, should be simply to assure itself that the standard of work accomplished is of satisfactory quality, without reference to the opinions expressed by teachers or students.

THE Report is characterized throughout by an unfortunate distrust of public and official bodies, and yet the voluntary agencies to be set up look to them for the fullest provision of the pecuniary aid necessary to the effective establishment of these courses of instruction.

Surely the right course for the electorate, which is now so largely composed of working men and women, would be to secure both in Parliament and upon local councils the type of men and women in full sympathy with democratic aims, and thus secure full support for the advanced teaching of history, literature, economics, and other liberal studies, so important to a democracy with such vital responsibilities as that of the United Kingdom. The circumstances of modern life, and its consequent complexities, make large demands upon the men and women of to-day. Their horizon is vastly wider, and the relations between the various sections of society and between nation and nation have grown more intimate and more responsible; but obviously the character of the education demanded by the adult man and woman will depend entirely upon the training and education they have enjoyed in childhood and youth, and the more intelligent, free, and efficient that education may have been, the more it will determine the aspirations, the level, and the range of the future studies of such men and women. The W.E.A. would do well also to fix its attention upon that.

THE report on juvenile delinquency made by the Juvenile Organizations Committee to the Board of Education, and now published by the Board, contains a large amount of interesting and instructive material based upon an analysis of 7,000 cases from four selected juvenile courts. Statistical tables are given regarding the offenders, the offences, and the treatment, and from these tables one gathers a good many rather surprising facts. For example, the present tendency to ignore and belittle sex distinctions is contradicted by the fact that of these 7,000 young persons only 4 per cent. were girls. Again, one's interpretation of the figures must be materially influenced by the consideration that such offences as larceny and housebreaking on one hand, and street trading and playing football in the streets on the other, appear side by side as if they were equally serious. The statements in the report regarding the connexion between poverty and theft, the influence of clubs, the gang spirit, and the various methods of dealing with offenders, are all of interest to social workers and to teachers in elementary and other schools. The Committee make definite recommendations regarding the selection of magistrates, the place for juvenile courts, the persons whose presence should be allowed when a case is being heard, and the detailed mode of conducting cases.

WE note with satisfaction that the Pharmaceutical Society will henceforth require that students who offer themselves for the qualifying examination shall have pursued an approved course of study in an institution approved by the society. The arrangements under which irregular preparation, which usually means mere cram, has sufficed for the purpose are thus definitely brought to an end. For Part I of the examination, the subjects of which are chemistry, botany, and physics, all those institutions are recognized by the society which are already recognized by the General Medical Council. For Part II, the subjects of which are pharmacy, materia medica, and other technical subjects, the society have approved courses in nine technical schools in various parts of the country. These courses being sufficient to meet the need, the Board of Education, as stated in Circular 1173, do not propose to recognize under their regulations any course in the subjects of Part II, unless the course has previously been recognized by the society. On the whole, preparation for the position of pharmaceutical chemist seems to have been placed on a distinctly improved educational footing.

DURING the recent meeting of the British Association at Cardiff, attention was directed to the scheme for the collection of rural lore in Wales through the medium of schools and colleges, which has been initiated by the Welsh Department of the Board of Education, and it was suggested that, *mutatis mutandis*, it should be extended to other parts of Britain. For the benefit of those who are not acquainted with the scheme, it may be stated briefly that its object is to preserve the memory of local traditions and customs in Wales, now unfortunately in danger of being lost, by recording the data for each parish or group of parishes on the appropriate quarter-sheet or sheet of the six-inch Ordnance Survey maps. The particulars, which are in the first instance collected by the children, include the traditional names of houses, roads, lanes, and fields, and of natural objects such as hills, woods, and streams, as well as earthworks, mounds, and other prehistoric and historic monuments. Nor are the details to be recorded of a topographical character only. Customs peculiar to the district, dialectal variations, folk-lore and any local folk-industry, such as the manufacture of baskets or pottery, or the survival of old implements such as the hand-loom or the flail, are noted on the back of the index-sheet supplied with the map to each school. When complete, the maps are to be collated by the Board of Celtic Studies of the University of Wales, and then deposited for reference in the National Library of Wales. Each school will keep a copy of its map and index-sheet for record and for additions. The maps of the Welshpool district, which were on exhibition during the meeting of the Association, were an object lesson not only of the archaeological interest of the scheme, but also of its value as a stimulus in the teaching of local history and geography.

THE University Tutorial Press, Ltd., have in preparation a new series of textbooks for use in agricultural schools and colleges. The first book of this series, which it is hoped to issue immediately, is "The Chemistry of Crop Production," by Prof. T. B. Wood, Head of the Cambridge University School of Agriculture. This will be followed later by "Animal Food Production," by the same author, and "Chemistry for Agricultural Students," by Mr. R. H. Adie.

THE SCIENCE OF EDUCATION.*

By SIR ROBERT BLAIR, LL.D.

THE value to education of science and the scientific method has hitherto been for the most part indirect and incidental. It has consisted very largely in deductions from another branch of study—namely, psychology—and has resulted for the most part from the invasion into education of those who were not themselves educationists. A moment has now been reached when education itself should be made the subject of a distinct department of science, when teachers themselves should become scientists.

There is in this respect a close analogy between education and medicine. Training the mind implies a knowledge of the mind, just as healing the body implies a knowledge of the body. Thus, logically, education is based upon psychology, as medicine is based on anatomy and physiology. And there the textbooks of educational method are usually content to leave it. But medicine is much more than applied physiology. It constitutes an independent system of facts, gathered and analysed, not by physiologists in the laboratory, but by physicians working in the hospital or by the bedside. In the same way, then, education as a science should do something more than mere applied psychology. It must be built up not out of the speculations of theorists, or from the deductions of psychologists, but by direct, definite, *ad hoc* inquiries concentrated upon the problems of the classroom by teachers themselves. When by their own researches teachers have demonstrated that their art is in fact a science, then, and not till then, will the public allow them the moral, social, and economic status which it already accords to other professions. The engineer and the doctor are duly recognized as scientific experts. The educationist should see to it that his science also becomes recognized, no longer as a general topic upon which any cultured layman may dogmatize, but as a technical branch of science, in which the educationist alone, in virtue of his special knowledge, his special training, his special experience, is the acknowledged expert.

Educational science has hitherto followed two main lines of investigation: first, the evaluation and improvement of teachers' methods; secondly, the diagnosis and treatment of children's individual capacities.

THE PSYCHOLOGY OF THE INDIVIDUAL CHILD.

It is upon the latter problem, or group of problems, that experimental work has in the past been chiefly directed, and in the immediate future is likely to be concentrated with the most fruitful results. The recent advances in "individual psychology"—the youngest branch of that infant science—have greatly emphasized the need, and assisted the development, of individual teaching. The keynote of successful instruction is to adapt that instruction to the individual child. But before instruction can be so adapted, the needs and the capacities of the individual child must first be discovered.

A. *Diagnosis*.—Such discovery (as in all sciences) may proceed by two methods, by observation and by experiment.

(1) The former method is in education the older. At one time, in the hands of Stanley Hall and his followers—the pioneers of the Child-Study movement—observation yielded fruitful results. And it is perhaps to be regretted that of late simple observations and descriptions have been neglected for the more ambitious method of experimental tests. There is much that a vigilant teacher can do without using any special apparatus and without conducting any special experiment. Conscientious records of the behaviour and responses of individual children, accurately described without any admixture of inference or hypothesis, would lay broad foundations upon which subsequent investigators could build. The study of children's temperament and character, for

* From the presidential address to the Educational Science Section of the British Association for the Advancement of Science at Cardiff, on August 24.

example—factors which have not yet been accorded their due weight in education—must for the present proceed upon these simpler lines.

(2) With experimental tests the progress made during the last decade has been enormous. The intelligence scale devised by Binet for the diagnosis of mental deficiency, the mental tests employed by the American army, the vocational tests now coming into use for the selection of employees—these have done much to familiarize, not school teachers and school doctors only, but also the general public, with the aims and possibilities of psychological measurement. More recently an endeavour has been made to assess directly the results of school instruction, and to record in quantitative terms the course of progress from year to year, by means of standardized tests for educational attainments. In this country research committees of the British Association and of the Child-Study Society have already commenced the standardization of normal performances in such subjects as reading and arithmetic. In America attempts have been made to standardize even more elusive subjects, such as drawing, handwork, English composition, and the subjects of the curriculum of the secondary school.

B. Treatment.—This work of diagnosis has done much to foster individual and differential teaching—the adaptation of education to individual children, or at least to special groups and types. It has not only assisted the machinery of segregation—of selecting the mentally deficient child at one end of the scale and the scholarship child at the other end; but it has also provided a method for assessing the results of different teaching methods as applied to these segregated groups. Progress has been most pronounced in the case of the sub-normal. The mentally defective are now taught in special schools, and receive an instruction of a specially adapted type. Some advance has more recently been made in differentiating the various grades and kinds of so-called deficiency; and in discriminating between the deficient and the merely backward and dull. With regard to the morally defective and delinquent, little scientific work has been attempted in this country, with the sole exception of the new experiment initiated by the Birmingham justices. In the United States some twenty centres or clinics have been established for the psychological examination of exceptional children; and in England school medical officers and others have urged the need for “intermediate” classes or schools not only to accommodate backward and borderline cases and cases of limited or special defect—e.g. “number-defect” and so-called “word-blindness”—but also to act as clearing-houses.

In Germany and elsewhere special interest has been aroused in super-normal children. The few investigations already made show clearly that additional attention, expenditure, study, and provision will yield for the community a far richer return in the case of the supernormal than in the sub-normal.

At Harvard and elsewhere psychologists have for some time been elaborating psychological tests to select those who are best fitted for different types of vocation. The investigation is still only in its initial stages. But it is clear that if vocational guidance were based, in part at least, upon observations and records made at school, instead of being based upon the limited interests and knowledge of the child and his parents, then not only employers, but also employees, their work, and the community as a whole, would profit. A large proportion of the vast wastage involved in the current system of indiscriminate engagement on probation would be saved.

The influence of sex, social status, and race upon individual differences in educational abilities has been studied upon a small scale. The differences are marked: and differences in sex and social status, when better understood, might well be taken into account, both in diagnosing mental deficiency and in awarding scholarships. As a rule, however, those due to sex and race are smaller than is popularly supposed. How far these differences, and those associated with social status, are inborn and ineradicable, and how far

they are due to differences in training and in tradition, can hardly be determined without a vast array of data.

TEACHING METHODS.

The subjects taught and the methods of teaching have considerably changed during recent years. In the more progressive types of schools several broad tendencies may be discerned. All owe their acceptance in part to the results of scientific investigators.

(1) Far less emphasis is now laid upon the *disciplinary value of subjects*, and upon subjects whose value is almost solely disciplinary. Following in the steps of a series of American investigators, Winch and Sleight in this country have shown very clearly that practice in one kind of activity produces improvements in other kinds of activities only under very limited and special conditions. The whole conception of transfer of training is thus changed, or (some maintain) destroyed; and the earlier notion of education as the strengthening, through exercise, of certain general faculties has consequently been revolutionized. There is a tendency to select subjects and methods of teaching rather for their material than their general value.

(2) Far less emphasis is now laid upon an advance according to strict *logical sequence* in teaching a given subject of the curriculum to children of successive ages. The steps and methods are being adapted rather to the natural capacities and interests of the child of each age. This genetic standpoint has received great help and encouragement from experimental psychology. Binet's own scale of intelligence was intended largely as a study in the mental development of the normal child. The developmental phases of particular characteristics—e.g. children's ideals—and special characteristics of particular developmental phases—e.g. adolescence—have been elaborately studied by Stanley Hall and his followers. Psychology, indeed, has done much to emphasize the importance of the post-pubertal period—the school-leaving age, and the years that follow. Such studies have an obvious bearing upon the curriculum and methods for our new continuation schools. But it is, perhaps, in the revolutionary changes in the teaching methods of the infants' schools, changes that are already profoundly influencing the methods of the senior department, that the influence of scientific study has been most strongly at work.

(3) Increasing emphasis is now being laid upon *mental and motor activities*. Early educational practice, like early psychology, was excessively intellectualistic. Recent child-study, however, has emphasized the importance of the motor and of the emotional aspects of the child's mental life. As a consequence, the theory and practice of education have assumed more of the pragmatic character which has characterized contemporary philosophy.

The progressive introduction of manual and practical subjects, both in and for themselves, and as aspects of other subjects, forms the most notable instance of this tendency. The educational process is assumed to start, not from the child's sensations (as nineteenth-century theory was so apt to maintain), but rather from his motor reactions to certain perpetual objects—objects of vital importance to him and to his species under primitive conditions, and therefore appealing to certain instinctive impulses. Further, the child's activities in the school should be, not indeed identical with, but continuous with, the activities of his subsequent profession or trade. Upon these grounds handicraft should now find a place in every school curriculum. It will be inserted both for its own sake, and for the sake of its connexions with other subjects, whether they be subjects of school life, of after life, or of human life generally.

(4) As a result of recent psychological work, more attention is now being paid to the *emotional, moral, and æsthetic* activities. This is a second instance of the same reaction from excessive intellectualism. Education in this country has ever claimed to form character as well as to impart knowledge. Formerly, this aim characterized the public schools rather than the public elementary schools. Recently, however, much has been done to infuse into the latter

(Continued on page 656.)

MESSRS. LONGMANS AND CO.'S LIST.

Modern Inorganic Chemistry. By J. W. MELLOR, D.Sc. With 334 Illustrations. 8vo. **12s. 6d.**

The book has been written from the modern standpoint, and, in consequence, the more recently established principles of physical chemistry have been woven with the facts generally taught in chemistry classes in Universities, Technical Institutes, and other Schools.

Introduction to Modern Inorganic Chemistry. By J. W. MELLOR, D.Sc. With 232 Illustrations. Crown 8vo. **7s. 6d.**

This book can be regarded as an abridgment of the author's "Modern Inorganic Chemistry," in a simpler dress, and it has been adapted to suit beginners in chemistry.

Higher Mathematics for Students of Chemistry and Physics. With Special Reference to Practical Work. By J. W. MELLOR, D.Sc. With Diagrams. 8vo. **21s. net.**

A Text-Book of Inorganic Chemistry. By G. S. NEWTH, F.I.C., F.C.S. With 155 Illustrations. Crown 8vo. **9s.**

LONGMANS, GREEN, AND CO., 39 Paternoster Row, London, E.C.4.

something of the spirit of the public schools. The principle of self-government, for example, has been applied with success not only in certain elementary schools, but also in several colonies for juvenile delinquents. And, in the latter case, its success has been attributed by the initiators directly to the fact that it is a corollary of sound child-psychology.

Bearing closely upon the subject of moral and emotional training is the mental work of the psychoanalysts. Freud has shown that many forms of mental inefficiency in later life—both major (such as hysteria, neurosis, certain kinds of "shell-shock," &c.) and minor (such as lapses of memory, of action, slips of tongue and pen)—are traceable to the repression of emotional experiences in earlier life. The principles themselves may, perhaps, still be regarded as, in part, a matter of controversy. But the discoveries upon which they are based vividly illustrate the enormous importance of the natural instincts, interests, and activities, inherited by the child as part of his biological equipment; and, together with the work done by English psychologists such as Shand and McDougall upon the emotional basis of character, have already had a considerable influence upon educational theory in this country.

(5) Increasing emphasis is now being laid upon *freedom* for individual effort and initiative. Here, again, the corollaries drawn from the psychoanalytic doctrines as to the dangers of repression are most suggestive. Already a better understanding of child-nature has led to the substitution of "internal" for "external" discipline; and the pre-determined routine demanded of entire classes is giving way to the growing recognition of the educational value of spontaneous efforts initiated by the individual, alone or in social co-operation with his fellows.

In appealing for greater freedom still, the new psychology is in line with the more advanced educational experiments, such as the work done by Mme Montessori and the founders of the Little Commonwealth.

(6) The *hygiene and technique of mental work* is itself being based upon scientific investigation. Of the numerous problems in the conditions and character of mental work generally, two deserve especial mention—fatigue, and the economy and technique of learning.

But of all the results of educational psychology, perhaps the most valuable is the slow but progressive inculcation of the whole teaching profession with a scientific spirit in their work, and a scientific attitude towards their pupils and their problems. Matter taught and teaching methods are no longer exclusively determined by mere tradition or mere opinion. They are being based more and more upon impartial observation, careful records, and statistical analysis—often assisted by laboratory technique—of the actual behaviour of individual children.

THE RELATION OF SCHOOLS TO LIFE.*

By E. STRUDWICK, M.A., Head Mistress of the City of London School for Girls.

THE school period has always been spoken of as the period of preparation for life, but the connexion between the preparation and the life for which it prepares has not, at any rate to a large number of people, appeared as close or as vital as it really is or should be. To many, I fancy, even to-day, and perhaps especially in England, school is a place for learning to read, to write, and to add figures together more or less correctly, and after that a place to be left behind and forgotten. School matters to the extent only that it provides the equipment for earning money—that is, for the serious business of life, and any "fancy" subjects that have no monetary value are still looked upon askance by many people. That is the reason, perhaps, why the general interest felt in girls' schools has been, on the

whole, far less than that felt in boys' schools, and only the recently developing necessity for girls to go out into the world and earn money, as their brothers do, has awakened parents to the fact that girls' education must not be wholly overlooked in favour of the boys'. Girls' schools are still very modern things, and their tradition a short one. To the world at large the doings of girls' schools have comparatively little appeal: there has been no classic written about them, no book which anyone but a schoolgirl would be interested to read—nothing to compare with "Tom Brown's Schooldays," for instance. I cannot remember ever having read a book in which a benevolent schoolmistress looms large in the early chapters of the heroine's life, as does the head master in so many of these lengthy descriptions of the development from child to man of the hero of a modern psychological novel. Even in these more enlightened days we are still out in the cold to some extent, though that extent lessens steadily from year to year. We have, at any rate, reached a point when writers of fiction are beginning to think it worth while to find fault with us, and that is, at least, something!

And yet, all the time, girls' schools have been—perhaps in virtue of their supposed uselessness from the practical point of view—doing something the value of which is emerging and becoming increasingly recognized to-day. They have been trying to prepare for the leisure moments of life as well as for its business, professional and domestic, and, in its increasing complexity, to provide the thread which will lead the seekers out of the labyrinth. The cry for shorter hours of work, as the work grows more monotonous and less individual—as it must necessarily do with the invention of ever more ingenious machinery—must be answered by the provision of an equipment for leisure far better than any yet achieved; but it is at least true to say that the teaching of literature, history, and other kindred subjects in girls' schools has aimed at such equipment, and not wholly without success.

And it is harder work to equip boys and girls for leisure than it is to equip them for work. For work, there is always routine to help, the sense of accomplishment, of money honestly earned. In leisure hours one is one's own task-master; the time-table is of one's own making, the task of one's own choosing. And, in these days, when so much stress is laid upon the need for self-expression to be encouraged in the schools, it must not be forgotten that most of us have very little self to express, and that only to the favoured few does leisure give the longed-for and only too short opportunity for creative work. Most of us cannot create much that is of any value even to ourselves; but leisure is for all, and it is the business of the school to make something a delight to every child, and to give to every child a sense that there are some avenues of interest which the school lessons have opened up to her, or the school corporate life and energies have revealed, which she can continue to follow and to make her own, either by way of creation or of appreciation, as a lasting happiness.

Now, how are we to forge this link between school and leisure hours? How are we going to help our boys and girls to enjoy books that are more interesting and amusing—of course, I am including works of fiction—than the class of literature to which they seem naturally to drift? How are we going to make their talks to one another a little more interesting than they are wont to be, and their thoughts when they walk alone along London streets or country roads a bit more vital and intelligent? It is clear they cannot always talk to one another in Greek or Latin, or think their thoughts in algebra or Euclid; but it is no less clear that the study of literature and talks with their masters and mistresses and their schoolfellows about the good things and the bad things in it, quite apart from preparation for examinations, and even outside school hours, gradually create a higher standard. And they should be quite free to laugh even at our best authors. When they come to such things as "My foot is on my native heath, and my name is MacGregor"; when they laugh, as they naturally will, their master and mistress should laugh with them, but should explain that, although the book

G. BELL AND SONS, Ltd.,
York House, Portugal Street, London, W.C.2.

is old-fashioned, and their great-grandfathers did not talk just like that, they used to think it was natural, and rather fine, when it was written down—and so on, a perfectly free, mind-to-mind discussion. Then, I do not think it is too much to hope that, by-and-by, our young readers will come to demand some of the qualities they have learned to like in the books they read for pleasure, and will condemn such as have not got them, and some of the novelettes with alluring titles may even become something of a drug in the market.

But, however this may be, whatever the future may have in store for us in the educational world, there can be no doubt the present is difficult for us. The war, with its pain and horror, has not left our schools untouched. There is a restlessness, an inability to settle down for long to any one pursuit, a lack of thoroughness and of the pleasure of getting at the heart of a thing with patient labour. Conventions are thrown over, the verdict of experience is challenged, the guidance of older judgments rejected—and for what reason? Is the spirit of the age sheer unreasoning perversity, or is there something rational underlying these manifestations?

A wave of realism has come over us, and flooded our politics, our art, our social life and manners. We are probably less trusting than our ancestors. You remember the story of the little girl and her mother in the train. She is looking out of the window and sees a cow. She asks her mother what it is, and she says, "A cow, dear." "Why?" she asks. That was quite a modern child; I doubt whether she could have existed in the days of our far-away ancestors. A disagreeable child, quite likely, because she asked a question so very hard to answer; but she was a realist, not to be satisfied by an unveridical statement. We grown-ups are just the same. The old-time orator who used to make his audience weep or shout with his flow of golden words has almost disappeared, simply because we said "Why?" and he could not explain without destroying the rhythm of his glowing periods. So we have to make school-days the first chapter in a child's book of life, and not a little volume all by itself. If the teacher is able to give, in answer to the child's "Why?" some reason that will satisfy his brain, all will be well; but if he is told that he must listen, and not talk, he may learn what his master teaches him, but the item will never be added to his little chart of life. That seems to me the true relation of school to life: not that the child is merely taught truth as held by the teacher, but that he is taught what is truth to him. He may change his view in later days, but the truth that was reasoned truth to him in early days will always live in his memory, while the truth that was only his teacher's will have died away, because it never had any real vitality for him.

But an education to fit our boys and girls for their work in life, and a training for an intelligent use of leisure, are not the only services that schools can render. It is true that more is often demanded from teachers than is in their power to perform, for no school, however admirable, can, or ought to, take the place of home training, or usurp the part which only a father and mother can effectively fill in the child's development. But the corporate life of a good school can, and does, do much to encourage good social qualities in our boys and girls; it sets up a little working model of adult life, with its hopes and disappointments, its selfishness and its generosity, its ambitions and its failures, all done to scale, and on the whole and as a rule it points a good moral; for it is generally the frank and generous boy or girl, who takes the knock without ill-temper and success without undue vanity, who has the best time at school. Selfishness is scouted—there is a general instinct against it; a selfish boy or girl is "out of it." There never was a time when this lesson, learned in school, was more needed in adult life, where, too often, material success and selfishness go hand in hand, and the generous instinct of the schoolboy tends to fade away. Then, too, school training should help much in the matter of self-discipline and self-control. The present feeling among those who would reform the old disciplinary methods is, so far as I can gauge it, that, as school is a half-way house between home and adult life, school should be rather less different from them both than it has hitherto been. Boys or girls emerging from a school

where they have been governed always by older people—taught by them, rewarded by them, and punished by them—are like ships adrift without a rudder. They ought to manage themselves to a much greater extent, pass judgment on each other, and learn by experience the reason for rules and the best ways of punishing their breach. In this way they are prepared to face life with more self-reliance, it is said, while the control which the masters and mistresses exercise, becoming advisory instead of formal and arbitrary, is a more real one, more closely resembling the relations between older and younger people in after life.

And so we have experiments being made in "self-government," with interesting results; for no one can say—to-day, at any rate—that head masters and head mistresses are "behind the times" in their desire to try new ways, and to understand their pupils from a new view-point.

Those head mistresses who have found the experiment a failure report that it has been because the girls themselves found the sense of responsibility too heavy, preferring to rely still upon the maturer judgment and riper experience of their teachers. Probably here, as in many other cases, the surest and the best course to pursue is a mid-way course. The old school life was not free enough; the new may be too free, but in lesser matters, at any rate, a degree of self-discipline and self-training is not only allowable, but advisable, that the school herd, when it scatters, may break up into units not without the power to guide their own destinies. Only let us beware of destroying too absolutely the good old-fashioned reverence for their elders which, in spite of all that is said against it, helps to keep life sweet for the young.

Another reform, very strongly advocated by some at the present time, has as its object the closer assimilation of school and home—that of co-education. This, it is felt, would be a more natural and wholesome way of beginning life for young people than the present method of separation of the sexes. Boys and girls would, it is urged, learn much that is good from each other, and the companionship and rivalry in work and play would lead to healthy friendships and a sound relationship generally between the sexes. It is, I think, perfectly true that the experiments made in co-education in the United Kingdom have been, on the whole, very successful; but it must, at the same time, be remembered that such schools are comparatively few in number, and are directed by enthusiasts who do their work well, while the universal adoption of the system in other countries has not had always so desirable a result. Moreover, there are advantages in the present system not to be overlooked. There is much less risk about it, and, while an ideal co-educational school may rise to heights that the separated school cannot attain, it is likely that the ideal might sink to depths which the others avoid.

It would be very delightful to be able to feel that one of these reforms, or even all of them, which I have indicated would get for us what we want, and secure just the right relation between school and life. But neither one nor all of them will do that—only a change of heart in the country, as a whole, towards education, and a recognition of it as a vital human asset, and of those who give it as not only essential, but also pleasant, members of the human family.

Never has the school mattered more to national life than it does at present, and never has there been a time when sympathy and understanding are so much needed between the nation at large and the teachers. The hope of the future rests with the young, with the boys and girls who are going to reconstruct the world, and a graver responsibility even than usual rests upon teachers and parents. And on the top of this comes the fact that the supply of teachers is not meeting the demand, and that there is a growing unwillingness among the new graduates of the universities to enter the teaching profession. If I might close with a word on this subject I should be grateful, for it has, in my view, an intimate bearing on the relation of schools to life. Schools depend ultimately upon personality: otherwise children could be taught quite competently by gramophone records. Whatever a child gets from her school comes to her through the teacher, coloured by

(Continued on page 660.)

THE OXFORD "IDEAL" LOOSE-LEAF SCHOOL NOTE BOOK.

Costs the same as one good ordinary Note Book and does the work of five or six.

Combines in one book the uses of Exercise Book, Scribbling Paper, Work Sheets, and Manuscript Pad. Elastic to any extent. Leaves transferable in any manner without risk of disarrangement or loss. No mechanism whatever, and no rings, posts, or staples.

The master can retain for correction any part of the current work of the whole class, whilst each pupil retains the remainder of his own.

Special editions for Science and Engineering classes.

Showing the manner of changing leaves.

ONE BOOK—MANY SUBJECTS.

Universally approved for Senior Classes.

THE "IDEAL" SINGLE DESK
(Folding or Fixed) with Locker, for Private Study
Classes in Senior Schools, and other Specialities in
School Furniture.

WILLIAM HUNT,

MANUFACTURER OF SCHOLASTIC
STATIONERY, FURNITURE, ETC.,

18 BROAD STREET, OXFORD.

FROM Mr. MURRAY'S LIST THE GROUNDWORK OF ENGLISH

A COMPLETE COURSE OF ENGLISH FOR ELEMENTARY SCHOOLS AND THE JUNIOR FORMS IN SECONDARY SCHOOLS.

By R. B. MORGAN, M.Litt.,
Inspector of Schools to the Croydon Education Committee.

With Illustrations. In Two Parts. 1s. 6d. each.

From the outset the author has endeavoured to focus the attention of the pupil on the beauties of expression as found not only in the great masters of literature, but also in art, sculpture, and music, by placing before them as models selected examples from the work of distinguished writers and artists. Interwoven with the main theme is a modicum of such grammar, spelling rules, and word-making as experience has proved to be necessary, thus making the course comprehensive, concise, and complete. Part I consists mainly of Oral Exercises. Part II of Written Work.

A NEW ENGLISH GRAMMAR.

By R. B. MORGAN, M.Litt. 60th thousand. 2s. 3d. This is an attempt to provide beginners with a thorough grounding in the elementary mechanism of their mother-tongue, before they begin the study of a foreign language.

EXERCISES IN ENGLISH GRAMMAR.

By R. B. MORGAN, M.Litt. 1s. 9d. The demand expressed by teachers for additional exercises of the same interesting and cheerful character as those which have helped to make the parent book so popular has induced the author to compile this volume of exercises.

ENGLISH COMPOSITION.

By E. E. KITCHENER, M.A. 23rd thousand. 2s. 3d. To learn grammar without putting it to practical uses is of little educational value. This book is meant to be both parallel and complementary to Morgan's English Grammar.

EXERCISES IN ENGLISH COMPOSITION.

By E. E. KITCHENER, M.A. 1s. 9d. This little book has been written primarily to help those teachers who prefer to use no regular textbook in composition.

MATTER, FORM, AND STYLE.

A Manual of Practice in the Writing of English Composition. By HARDRESS O'GRADY. 2s. 6d.

GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE AVEC EXERCICES.

By W. MANSFIELD POOLE, M.A. Fourth and Revised Edition. 3s. A sound, progressive exposition of the first principles of Grammar and Composition.

LA LANGUE FRANÇAISE.

Grammaire à l'usage des classes moyennes et supérieures. By G. KESSEN BUZZA, B.A., and E. E. HURT, B.A. 3s. 6d. This book is intended for pupils in their Third and Fourth Years of French. Especially suitable for use after Poole's "Grammaire Française Élémentaire."

A "MIDDLE METHOD" GERMAN COURSE.

Reading Book and Grammar with Direct Method and Re-translation Exercises. By F. W. M. DRAPER, B.A. (Cantab.), L. ès L. (University of Paris). 3s.

PRACTICAL ARITHMETIC.

An Introduction to Elementary Mathematics. By A. CONSTERDINE, M.A., and S. O. ANDREW, M.A. Part I, 1s. 6d. Part II, 1s. 6d. Complete, 2s. 6d. Teachers' Edition, with Answers and Index, 3s.

LIMEN. A First Latin Book.

By Professors WALTERS and CONWAY. 6th Edition. 70th thousand. 3s., or in Two Parts, 2s. each. A rapid modern course, which can be used equally well for teaching in Latin or in English.

DEIGMA. A First Greek Book.

By Professors WALTERS and CONWAY. 4s. Follows the methods of LIMEN; supplies all the main requirements for a thorough grounding in the language.

London:

JOHN MURRAY, Albemarle Street, W.1.

the teacher's point of view, enriched or impoverished by the medium through which it has passed. An inferior teacher can darken, as much as a good teacher can brighten, a child's horizon.

That so few students are becoming teachers just now is, I believe, not mainly due to reasons of salary; it is because they see the hardships, difficulties, and drawbacks of the profession more clearly than they see its compensations. They see themselves forced to live a life apart from their friends of different professions, their evenings given up to corrections and preparation, their long holidays coming when other people are at work. They see themselves banished, perhaps, to towns where local society has no welcome for them, where they have only their companions on the school staff for friends, and, finally, they see themselves becoming pedagogues only, whose one focus of thought is the school and their work. If there is any foundation of fact in this somewhat dreary vision (and I think there is, though the blame for it rests not on one side only), then it is for us all to mend what can be mended in a teacher's lot, for no truly humane education can be given by a teacher whose outlook is unduly and unnaturally limited and narrowed.

The right relation between school and life can be attained only when two conditions are fulfilled: when to those who teach their profession is a vocation, and the love and confidence of their pupils a reward beyond price, and when those who do *not* teach are ready to accept in their midst those who *do*, and to make them feel that, in the best and truest sense, they belong to the world.

PERSONAL PARAGRAPHS.

DR. GREGG, Bishop of Ossory, recently appointed as Archbishop of Dublin in succession to the Most Rev. Dr. D'Arcy, was a scholar of Christ's College, Cambridge, and formerly Archbishop King's Lecturer in Divinity at Dublin University. He succeeded Dr. Bernard as Bishop of Ossory in 1913. Canon Day, Rector of St. Ann's, Dublin, who follows Dr. Gregg as Bishop of Ossory, was also educated at Cambridge, and has had a wide experience in London, India, and Dublin. He is well known in Dublin for his work in connexion with the Boys' Brigade.

THE REV. W. H. BENNETT, whose death, at the age of sixty-five, is reported in the press, was among the first Nonconformists to be elected a Fellow of his college. He was educated at the City of London School, the Independent College, Manchester, and St. John's College, Cambridge. In 1888 he was appointed Professor of Hebrew and Old Testament at Hackney College, and occupied simultaneously, for over twenty years, a similar post at New College, Hampstead. He became Principal of the Lancashire Independent College in 1913. Dr. Bennett was a member of the Senate of London University from 1907 to 1913, and was the first secretary of the Theological Board. He was a leading Free Church exponent of Biblical scholarship, and his reputation as a scholar extended far beyond Free Church circles.

THE valuable services of Dr. Roux, who is at the head of the Pasteur Institute, has been publicly recognized by the award of the Grand Cross of the Legion of Honour. It was the patient work of Dr. Roux which made it possible for Yersin to discover the bacterial toxins, for Behring to perfect the modern treatment of diphtheria, and for Vaillard, Calmette, and Borrel to prepare their serums. Again, the decision of the Institute to continue the sale of serums and cultures without increase in price has conferred great benefits on many, and was largely due to Dr. Roux.

MR. R. H. GRETTON, whose appointment as Vice-Principal of Ruskin College is just announced, was educated at Magdalen

College, Oxford. He was formerly London editor of the *Manchester Guardian*, and has since been engaged in historical research. During the war he served as a private in the R.G.A. and with the Labour Corps in France, and in 1918 he became one of the original staff of the Army Education Department at the War Office. Mr. Gretton is the author of several historical works, and is well known as a lecturer of the Workers' Educational Association.

THE sudden death of the Rev. J. C. Whall, Vicar of Hope-say, Salop, will be deeply regretted by many members of the teaching profession. Educated at Sidney Sussex College, Cambridge, of which he was a foundation scholar and exhibitor, he began his scholastic career as an assistant master at the Surrey County School, Cranleigh. Afterwards he gave service as a master at King Edward's School, Bromsgrove, as warden of Christ's College, Hobart, Tasmania, and as master of the Lower School, Queen Elizabeth's School, Ipswich; and in 1891 he accepted the position of Chief Inspector of Religious Education in the diocese of Worcester.

MR. R. P. G. WILLIAMSON, who has been appointed to succeed Dr. W. Ludford Freeman as Director of Education for Stoke-on-Trent, has been prominently associated with the educational life of the Potteries for the last twenty years. He was educated at Glasgow University, in the days when Lord Kelvin, Sir Richard Jebb, and Prof. Caird were members of the academic staff. After holding positions as an assistant master at Dennistown Secondary School, Glasgow, Alloa Academy, and the Pupil-Teachers' Centre, Bradford, he became principal of the Hanley Pupil-Teachers' Centre in 1900—a time when, in education, as in so much else, Hanley was setting so vigorous an example to the neighbourhood. In 1912, when the pupil-teacher centre system gave place to the preliminary training of teachers in secondary schools, Mr. Williamson became Inspector of Schools for the area. He is an accomplished classical scholar and a man of keen literary tastes, and his appointment is warmly welcomed by the teachers in the area, many of whom received their early training under his supervision.

By the death of the Rev. C. H. W. Johns, late Master of St. Catharine's College, Cambridge, and Residentiary Canon of Norwich, a notable figure has been removed from university circles. Dr. Johns was an old pupil of Faversham Grammar School, and he took his degree as 27th Wrangler in 1880 at Queens' College, Cambridge. During the next seven years he held appointments in succession as second master at Horton College, Tasmania, as assistant at Paston Grammar School, and as tutor to St. Peter's College, Peterborough. After serving as curate at St. Botolph's, Helpston, he returned to Queens' as assistant chaplain, and became Edwardes Fellow and Lecturer in Assyriology until he was elected Master of St. Catharine's in 1909. For some years, also, he was Lecturer in Assyriology at King's College, London. Dr. Johns carried out much original research in Assyriology. His work on the monuments in the British Museum, his reports on the numerous tablets entrusted to him from private sources, and his publications, including the three volumes on "Assyrian Deeds and Documents," placed him in the front rank of European and American Assyriologists. He was a genial and kindly scholar, always ready to help his students, and his effective work as a reformer in university matters makes his loss the more keenly felt at Cambridge during the present reconstruction period.

THE appointment of the Rev. H. J. White, M.A., D.D., Professor of New Testament Exegesis at King's College, London, to the Deanery of Christ Church, Oxford, in succession to the Very Rev. T. B. Strong, D.D., has been approved by the King. Dr. White was Vice-Principal of Salisbury Theological College

(Continued on page 662.)

From Mr. EDWARD ARNOLD'S List.

A NEW PRESENTATION OF EDUCATIONAL PROBLEMS.

THE MODERN EDUCATOR'S LIBRARY.

General Editor: Prof. A. A. COCK, Professor of Education in University College, Southampton. Crown 8vo. Uniform cloth binding. 6s. net each.

"The Modern Educator's Library" has been designed to give considered positions of the best theory and practice in English education of to-day. It is planned to cover the principal problems of educational theory in general, of curriculum and organization, of some unexhausted aspects of the history of education, and of special branches of applied education.

Education: its Data and First Principles. By T. PERCY NUNN, M.A., D.Sc., Professor of Education in the University of London. Second impression.

"The appearance of Prof. Nunn's book is a real event in history of English educational thought. It is in effect a new synthesis of current philosophical, psychological, and biological conceptions formed to elucidate the nature and problem of education. As such it illustrates at once the difficulty of the subject and the nature of the equipment a man must have who ventures to deal with it in this large way. So far as I know the book has no parallel, and certainly no equal."

"The result is a book which no 'advanced' student of education and no well informed schoolmaster can afford to neglect; a book, moreover, which will give the academic study of educational theory the centre which it has long needed. As such it must in its turn produce a profound effect upon educational practice."—*Journal of Experimental Pedagogy*.

Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D., late Head Mistress of the North London Collegiate School for Girls.

"The ripe wisdom which informs Mrs. Bryant's whole treatment of moral education, Bible teaching, and the presentment of essential religious truth, would be hard to match elsewhere." Mrs. Bryant's book is of great value at the present time.—*The Journal of Education*.

The Child under Eight. By E. R. MURRAY, Vice-Principal of Maria Grey Training College, and HENRIETTA BROWN-SMITH, L.L.A., Lecturer in Education, Goldsmith's College, University of London. Second impression.

"This is a book for mothers, fathers, and teachers. It would not do aunts any harm. The present volume is a happy blend of principle, history, and method, and it is as full of delight as infant education itself ought to be."—*Daily News*.

The Teaching of Modern Foreign Languages in School and University. By H. G. ATKINS, M.A., Professor of German in King's College, University of London, and H. L. HUTTON, M.A., Senior Modern Language Master at Merchant Taylors' School.

"It is useful because it crystallizes the best opinions on many problems connected with modern language teaching. Its merits are such that it should be added at once to every teacher's library."—*The Journal of Education*.

Organisation and Curricula of Schools. By W. G. SLEIGHT, M.A., D.Lit.

Other Volumes in preparation.

MISS DRUMMOND'S NEW BOOK.

Five Years Old or Thereabouts. Some Chapters on the Psychology and Training of Little Children. By MARGARET DRUMMOND, M.A., Lecturer on Psychology in the Edinburgh Provincial Training College. Cloth. 5s. net.

Elementary Civics. By C. H. BLAKISTON, M.A., Assistant Master at Eton College. With Foreword by Bishop WELLDON. Adapted to the Syllabus of the British Association Committee on Training in Citizenship. Crown 8vo. 2s. 6d.

"This book is packed with facts and so provocative in its brevity that it will probably induce readers to pursue the topics in other larger works. That is to say, it is a very useful introduction."—Mr. JOHN MURRAY, M.P., in the *Yorkshire Post*.

To be published immediately.

A SURVEY OF ENGLISH LITERATURE, 1830-1880.

By OLIVER ELTON, Hon. D.Lit. Durham and Manchester, Professor of English Literature in the University of Liverpool. 2 volumes. 32s. net.

In this important work Professor Elton continues for another half century the survey of English Literature which he inaugurated with the two volumes published in 1912, covering the period from 1780 to 1830. A second edition of the earlier work appears contemporaneously with the two new volumes. The general aim of the two works is critical—they are a series of judgments and appreciations—but there is also an historical background and setting; and a mass of notes, printed at the end of each volume, and meant primarily for scholars, gives further evidence on points of detail as well as some bibliographical guidance.

New Books in Mathematics and Science.

A GEOMETRY FOR SCHOOLS.

(Embodying the recommendations of the Board of Education for Teaching Geometry.) Edited by A. C. JONES, M.A., Ph.D., Senior Assistant Master at Bradford Grammar School. In Three Parts. Part I, Geometrical Concepts, Postulates, and Propositions 1-7. 2s. Part II, Propositions 8-61. 2s. 6d. Part III, Propositions 62-90. 2s. 6d.

New and Revised (Third) Edition.

ELECTRICITY AND MAGNETISM.

By C. E. ASHFORD, LL.D., M.A., Head Master of the Royal Naval College, Dartmouth. With 200 diagrams. Cloth. 4s. 6d.

In this edition some of the results of recent researches, sometimes called the "New Physics," have been incorporated in so far as they can be understood by those commencing the study of Electricity and Magnetism. For the chapter on Röntgen Rays, an entirely new chapter entitled "Passage of Electricity through Gases: Wireless Telegraphy," has been substituted, in which some of the broad generalizations from the discoveries of Sir J. J. Thomson and his school are given. In addition, other articles such as "The Electron and Theory as to the Nature of Electricity," have been rewritten, while an appendix of Ohm's Law has been substituted for an obsolete description of apparatus.

PRELIMINARY PRACTICAL SCIENCE.

By E. SANKEY, Head Master of the Derker Council School, Oldham, and J. PARKER, Science Master at Derker Continuation School. 2s.

This book may be regarded as preparatory to any Senior Course, such as Mechanical Engineering, Coal Mining, Chemical and Building Trades, Cotton Spinning and Weaving. It is suitable for use in Central Schools, Evening and Day Continuation Schools, and Branch Technical Schools.

MATHEMATICS FOR TECHNICAL STUDENTS.

By S. N. FORREST, M.A., B.Sc., Lecturer at the Royal Technical College, Glasgow. 7s. 6d. [Just ready.]

A two years' course, in which all the examples are based on problems likely to be met with in practical work.

JUST PUBLISHED.

ENGLISH BALLADS AND SHORT NARRATIVE POEMS.

With Introduction by Sir HENRY NEWBOLT. 2s. 6d.

ENGLISH NARRATIVE POEMS.

With Introduction by Sir HENRY NEWBOLT. 2s. 6d.

Contents.—I. Tennyson—Morte d'Arthur. II. Arnold—Sohrab and Rustum. III. Longfellow—Osseo and Owenee. IV. Scott—The Battle of Bannockburn. V. Crabbe—Richard's Wooing. VI. Wordsworth—Michael. VII. Morris—Atalanta's Race. VIII. Keats—The Eve of St. Agnes. IX. Byron—Mazeppa's Ride. X. Browning—Pheldippides. XI. Coleridge—The Rime of the Ancient Mariner. Notes.

New Editions.

New Edition, brought down to the end of the Great War.

A History of England. By Sir CHARLES OMAN, K.B.E., M.P., Chichele Professor of Modern History in Oxford University. 800 pages. 8s. 6d.

In Two Parts. Part I, from the Earliest Times to 1603, 4s. 6d. Part II, from 1603 to 1918, 5s. 6d.

In Three Divisions—I, to 1307, 3s.; II, 1307 to 1688, 4s.; III, 1688 to 1918, 4s. 6d.

A Junior History of England. By Sir CHARLES OMAN, K.B.E., M.P., and MARY OMAN. New Edition, revised to the end of the Great War. 3s. 6d.

Outlines of European History, 1789-1914. By G. BURRELL-SMITH, M.A., Assistant Master at Repton School. With Maps. 4s. New Edition, beginning at the French Revolution.

from 1887 to 1895, and Theological Lecturer and Chaplain of Merton College, Oxford, from 1895 to 1905.

* * *

DR. S. WATKINS, of the University College, Cardiff, is publishing, in pamphlet form, his paper on "The Relation of Education Authorities to Modern Educational Progress," which attracted so much attention at the Educational Conference held in Cardiff last November. An enthusiastic educationist, Dr. Watkins acted as local Secretary to the Educational Science Section of the British Association meetings at Cardiff, and at the Annual Meeting of the Welsh School of Social Service he was entrusted with the subject of adult education.

ONLOOKER.

TOPICS AND EVENTS.

ADMISSION TO TRAINING COLLEGES.—The complicated conditions under which various examinations have been accepted by the Board of Education as qualifying for admission to a training college, and for recognition as an uncertificated teacher, have long been a source of trouble and annoyance to everyone concerned; and it is a distinct gain that, by the terms of Circulars 1166 and 1171, the certificate of any approved First Examination, if obtained after July 5, 1920, will now be accepted for the purposes in question, and that similar certificates obtained before that date will be accepted on certain reasonable conditions. This simplification of procedure removes the cause of endless waste of time, misunderstanding, and delay.

SPECIAL SCHOOLS.—Local Education Authorities have on the whole fulfilled their duties towards blind, deaf, crippled, and epileptic persons so far as the establishment of special schools is concerned. The trouble about these unfortunate persons is that, e.g., a blind child on leaving the special school at sixteen is not an efficient worker, and cannot be expected to be a wage-earner until he has received a thorough training and has also had time to acquire the speed essential to a successful worker. The training institution, in fact, is an essential link between the special school and the workshop; this position is fully recognized by the Regulations recently issued by the Board of Education for the training of blind, &c., students. In order to secure better and more extended facilities, the Board have decided to modify and substantially to increase their grants in aid.

AMENDING REGULATIONS FOR TEACHERS.—The Board of Education have published the draft of an amending regulation of the Elementary Education Provisional Code, 1919. The modifications of existing regulations provide *inter alia* that all cases of summary dismissal of a teacher should immediately be reported to the Board, with full particulars; that the exclusion of children under the age of compulsory attendance shall be deemed to be exclusion "on reasonable grounds"; and that the services of a certificated teacher as organizer or demonstrator may be valid for purposes of endorsement, though not for purposes of superannuation. Noteworthy modifications are also made in regard to the employment of supplementary teachers. The Board may now make it a condition of the employment of such teachers that suitable provision be made for enabling them "to prepare and improve themselves for the practical work of teaching."

LECTURES AND CLASSES FOR LONDON TEACHERS.—The programme of lectures and classes for teachers for the session 1920-21 has been issued by the L.C.C. Education Committee in the form of a handbook. The lectures, which are remarkably varied in character, are designed to be of value to teachers in their work in the schools. The classes have been arranged to fulfil several purposes—to improve a teacher's knowledge and skill in respect of some specific subject of the school curriculum; to improve his appreciation of the aesthetic subjects of school work; and to widen his outlook and to bring him into contact with authorities in different branches of learning. The lectures are available to all London teachers irrespective of the particular institution at which they may be engaged. Other teachers will be admitted where accommodation permits. It is impossible here to enumerate the large number of courses of lectures which deal with art, domestic subjects, economics, English literature, foreign literatures, geo-

graphy, history, mathematics, music, pedagogy, and science. There is an imposing array of distinguished lecturers, among which we notice the names of Sir Israel Gollancz, Mr. William Archer, Sir Charles P. Lucas, K.C.B., Lord Robert Cecil, and Profs. John Adams, A. N. Whitehead, W. D. Halliburton, and C. Spearman, to name only a few.

VACATION COURSE FOR MUSIC TEACHERS.—A large number of teachers of both sexes attended the Vacation Course for music teachers held at Streatham Hill High School (G.P.D.S.T.), London, during the week September 6-11. This course of lectures was designed to show the practical application of music teaching in all its branches: musical appreciation, aural training, instrumental teaching, and singing. Mr. Stewart Macpherson, R.A.M., dealt with musical appreciation, and showed the historical development of great composers, from Beethoven to Debussy. Miss Elsie Murray illustrated her lectures on aural training throughout the school by giving typical lessons. These commenced with the teaching of rhythm to children five to seven by means of movement and by the use of percussion instruments, and led to training in the writing of original tunes and harmonies. Mr. Frederick Moore gave a series of most instructive talks on piano technique; and Mr. James Bates, of the London College of Choristers, added valuable matter on the singing class. The lectures of Mr. Moore and Mr. Bates were made most interesting and enjoyable by the addition of many illustrations by their pupils. Miss Dorothea Webb's recital of folk-songs was delightful in selection and rendering. The Gramophone Company showed instruments and demonstrated their use in schools.

CAMBRIDGE LOCAL EXAMINATIONS.—The Class Lists of the Cambridge Local Examinations held in July show that the total number of candidates entered was 7,756, exclusive of 1,346 who were examined at Colonial centres. 183 candidates were entered for the Higher School Certificate Examination, which was held for the third time on this occasion; 113 of these were successful. Distinctions were gained by 2 candidates in Latin, 1 in Greek, 9 in French, 1 in German, 1 in Spanish, 3 in English, 3 in History, 11 in Mathematics, 2 in Physics, 7 in Chemistry, 1 in Biology, and 1 in Religious Knowledge. The Marmaduke Levitt Scholarship has been awarded to R. A. R. Tricker, of Ipswich Municipal Secondary School for Boys. Exhibitions at St. John's College have been awarded to T. H. Foster, of Tavistock Grammar School, and to P. N. H. Palmer, of King's Lynn Grammar School. In the Senior Examination, 1,808 boys and 1,751 girls passed, First Class Honours being gained by 120 boys and 44 girls; exemption from the whole of the Previous Examination was gained by 299 boys and 206 girls. Of the junior candidates, 414 boys and 448 girls satisfied the examiners, 27 boys and 3 girls being placed in the First Class. In the Preliminary Examination 199 boys and 244 girls passed.

CIVIC EDUCATION LEAGUE LECTURES.—To meet the increasing demand for a wider knowledge of modern civics, the Civic Education League is organizing a course of twelve lectures on "The Foundations of Civics" for the autumn term. The lectures will be given by Miss E. M. White, Lecturer on Civics at the Municipal Training College, Brighton, on Friday evenings, commencing on October 1, at Le Play House, Belgrave Road, S.W.1. The syllabus is most promising, and covers: The scope and purpose of civics; the study of civics and the mistakes to avoid; the family as a social unit and its development; the village; towns and cities; history and administration of local government; the State—its functions, problems, and services; the workers and their problems; education; the British Commonwealth; social idea of the present times; spheres of reorganization and standards of reform. The presentation of the questions of civics, and the inculcation in school children of the precepts of citizenship, is beset with pitfalls, and the efforts of the Civic Education League should therefore receive hearty commendation. The lectures will be of special interest not only to teachers, but also to all social workers and speakers on citizenship.

BOLTON SCHOOL ADOPTS SERBIAN ORPHANAGE.—Through the "Save the Children Fund," the girls of Bolton School, the head mistress of which is Miss M. H. Meade, have "adopted" Monastir Orphanage, which is one of the branches of the work of the Serb-Croat-Slovene Child Welfare Association operating throughout Jugo-Slavia (Greater Serbia). The work at Monastir has a special historic interest, because it formed the nucleus from which the whole scheme for the protection of the Jugo-Slav children arose, and many of the children now in the home were taken from Monastir to Voden in Albania during the time when the Serbs were fighting round Monastir.

From HORACE MARSHALL & SON'S LIST.

Outlines of European History, 1789-1914.

By C. L. THOMSON, F.R.Hist.S., and M. B. CURRAN, Assistant Secretary to the Royal Historical Society, and Secretary to the Historical Association.

This history, the work of two teachers of long experience, is adapted for the use of pupils in the upper and middle forms of Secondary Schools. It treats first of the European wars from 1789-1815, then of the history of the various countries separately from 1815-70, and lastly of the developments which brought about the European War of 1914. LONDON: MR. WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

THE PUBLIC SCHOOLS IN A NATIONAL SYSTEM OF EDUCATION.*

By FRANK FLETCHER, M.A., Head Master of Charterhouse.

I SHALL begin by asking you to make, or to allow me to make, three assumptions. I shall assume that we know what we mean when we talk about a national system, though it would take some time to explain it. I shall assume again that we have a more or less definite idea what we mean by the public schools, though an exact definition would be a matter of considerable difficulty. Thirdly, I shall assume that the public schools stand for something in education which is of real value to the nation, that their characteristic type is one which it is both the interest and desire of Englishmen to preserve. The third assumption will perhaps seem the greatest to some people—to those who take their ideas from schoolboy novels and newspaper correspondence; but, in putting it forward, I speak, though perhaps not without prejudice, yet certainly not without experience, and, if you do not allow me to make it, I shall merely be wasting your time and mine in the rest of this paper.

At the same time, I hope that in the course of what I have to say I shall succeed in making clearer what my conception of a real national system would be, what I regard as the characteristic marks of a public school, and why I believe the type to be of national value.

We are, of course, a long way yet from any really national system of education. Even in respect of elementary education the system is only fifty years old, and secondary education is still in its infancy. It is still the exception, and not the rule, for a boy's or girl's schooling to be continued after the age of fourteen; but I suppose none of us here will

* Paper read to the Educational Science Section of the British Association at Cardiff on August 27.

feel satisfied with any system which does not provide somehow or other opportunities of full and continuous education up to eighteen: I will not say to *every* boy and girl, but to everyone who is capable of profiting by it. To let the education of the great majority of the children of the country begin and end with an elementary knowledge of reading, writing, and arithmetic is to furnish them with tools—edged tools—without teaching them how to use them, and without taking any steps to prevent them from going rusty by disuse.

The recent Education Act, which comes into working at the beginning of next year, marks a small, but very important, step forward in the direction we must all desire. It is itself a stage in the process by which the State had gradually been taking on itself the responsibility for secondary as well as for elementary education. Up to now the only children for whom secondary education has been provided have been those whose parents could afford to pay for it, and the increasing but still comparatively small number who were sent on from elementary to secondary schools at the public expense.

The last twenty years, as we know, have seen a great increase in the number of children so provided for; it has been a period marked by the building of new secondary schools throughout the country, and the extension of State aid and partial State control to a large number of existing schools. I need not dwell at length on the process by which these schools, for the most part grammar schools with, at any rate, a large proportion of day boys and strong local associations, have been drawn into the State system. The rivalry of the State-built schools created new financial demands, which existing schools could not meet without State aid; and in return for that aid they were required, not unnaturally, to accept a measure of public control, and to make a definite contribution to the national system of education by receiving boys from the elementary schools.

The arrangement was not accepted, as you know, without much heart-burning and anxiety on the part of the schools so absorbed. They feared the tyranny of the inspector; they feared the fussy, and often unintelligent, interference of local authorities; they feared that the traditions and character of their schools would be swamped by the invasion of a large number of elementary scholars. The success or failure of the experiment has naturally varied with the wisdom and unwisdom of the personalities involved.

So much is matter of common knowledge to all who know anything of the recent history of our education. The result was a system of secondary education by which the great majority of the schools were more or less under State and local control, with a definite function in local education. There remained a very important minority—the big boarding schools of the country, of which the so-called public schools are the chief representatives.

These are essentially non-local; they do not draw their boys from one limited area, but from all parts of England, Scotland, and Ireland—indeed, from the whole Empire. They are fed, not by the State elementary schools, but by a large number of privately managed preparatory schools throughout the country. They are self-supporting, maintained by the fees paid by parents; hitherto they have been independent of State aid, and therefore, in the main, of State control.

This statement requires some little modification. A school like Charterhouse is not, of course, completely independent of the State. It is administered by statutes which cannot be altered without the consent of King in Council and of Parliament; it cannot borrow money without leave from the Board of Education; it is inspected from time to time either by the Board of Education or some body approved by it, and this inspection, formerly accepted for other reasons, is now required by the new Education Act.

It will not, I hope, be denied that these schools do national work; but, except for the restrictions just mentioned, they can hardly be counted as part of the national system. At the same time, they are drawing more and more into touch with it: the last ten years have seen a great change in the relations between these schools and the State. Until comparatively

recently, the Board of Education and the public schools stood over against one another in an attitude not, I hope, of hostility, but certainly of mutual ignorance and suspicion. But "*nous avons changé tout cela*"; and the change from suspicion and aloofness to a cordial understanding, alliance, and co-operation has been for the advantage, not only of the public schools, but I hope also of the Board itself. It has been a gradual process, but it has received its greatest encouragement in the last few years, during which the Board has had for its President a real teacher and educational expert, under whom all the best educational influences in the Education Office have been set free to do their beneficent work.

The question of the relation of these schools to the State has been raised recently in a very important and interesting way by the Teachers' Superannuation Act of 1918. This Act, intended to provide pensions to all teachers in grant-aided schools, was altered in Parliament so as to admit to its benefits any school not run for private profit which was unable out of its own resources to maintain a satisfactory pensions scheme, and which fulfilled certain conditions laid down by the Board of Education. Of these conditions, as so far laid down, the most important is a requirement to "co-operate in the public system of education by admitting as day boys or boarders pupils nominated by local education authorities or by governing bodies of grant-aided schools."

Now, it is certain that a considerable number of the public schools are "unable, out of their own resources, to provide a satisfactory pension scheme," and, if they are to attract good masters and pay them adequately, they must either raise their fees or apply for State pensions. It is practically certain that some will take the latter step. This will create a new situation: it will bring into the State system a new type of school which is essentially non-local, and the regulations hitherto adapted to local schools will have to be translated into a new language to suit the new type. It is still uncertain what this language will be, and what will be the precise conditions under which the L.E.A. nominees will be admitted.

But, meanwhile, the public schools, on their side, led by those who will not or cannot apply for State pensions, have taken a step forward. We felt that, to have the public schools divided into two classes—a majority who received State pensions and, in return, co-operated in the national system, and a minority who neither received nor gave anything—would be a very unhappy and invidious position for both sections. Those of us who were not eligible for State pensions, and had no intention of applying for them, were anxious that no action taken by us in standing out of the Act should hamper or reflect upon the schools which were compelled for financial reasons to ask State assistance; that no excuse should be given to people who were foolish enough to see a distinction of status or social standing between those who came under the Act and those who did not. But we were still more anxious that we should not be excluded from rendering service merely because we did not need or desire payment. It may or may not be a serious thing for a school like Charterhouse to be excluded from receiving State pensions; it is a *very* serious thing to be excluded from opportunities of rendering service to the State in direct connexion with the national system.

Accordingly, last year, on behalf of the public schools which are excluded from the benefits of the Act, I went with the head masters of Eton and Harrow to interview the President of the Board of Education, with an offer of national service from our schools similar to that which would be demanded of those receiving State pensions. Practically our offer came to this: Tell us what form of service in connexion with the national system you would demand of us if we were definitely under you, and we will do our best to render it.

You will see that what we had primarily in our mind as our contribution to the national system was some arrangement by which our schools might become more accessible: might open their doors to classes which hitherto, by their circumstances, not by any wish or arrangement of ours, have been excluded from them. Mr. Fisher, in his answer to us, and in a long

letter which I circulated among all the public schools, recognized that this was our offer, and made various suggestions as to services which we might render.

The problem of admitting to the public schools boys corresponding in some way to the "free-placers" of the State-aided secondary schools is not an easy one. The schools which have hitherto received them are, as I have reminded you, primarily day schools with strong local connexions. The public schools are essentially non-local, and mainly boarding schools. This fact raises difficulties at once financial and educational. To give the new type of boys whom we are considering a fair chance of the full advantages a public school offers they ought, in most cases, to come as boarders. They must enter, not as aliens and sojourners, but as full citizens, with full privileges of membership. But boarding schools are necessarily expensive, and I fear increasingly so, and will many County Councils and local education authorities be prepared to meet the necessary expenses for maintenance? Even if, as I hope would be the case, funds could be provided from the schools themselves to meet the contribution of the education authority, the cost to the latter would not be light, and the number of boys who could be sent to such schools would be a small one.

That is the financial difficulty—considerable, but not, I hope, insuperable. The educational difficulty is more serious. All experts whom I have consulted—among them Sir Robert Blair, the Parliamentary Secretary of the N.U.T., Sir James Yoxall, and an Inspector of Schools for Surrey—agreed that boys could not pass directly from an elementary school to a public school. The normal age of transference of county council scholars from elementary to secondary schools is eleven and a-half; the normal age of entry to public schools is thirteen and a-half; and, as our elementary schools are at present constituted, no boy by staying at them till thirteen and a-half could possibly qualify for the work he would have to do in even the lowest form of a public school. It follows that there would have to be an intermediate stage at a secondary school. Against this suggestion a protest was raised by the head masters of these secondary schools, who objected to the use of their schools as a passage, and feared that the public schools would skim off the cream and leave them with only the thinner milk. To meet this difficulty, Mr. Fisher suggested that we should concentrate our attention not on the larger schools in populous districts, but on rural areas with only small secondary schools, in which only one type of advanced education could well be given. In any such area there may often be one or two boys of promise whose bent does not happen to coincide with that of the school and its head master—mathematicians or scientists whose head master was mainly interested in literature—or more often boys with a literary bent under a scientific head master. To such boys the chance of admission to a public school large enough to give a liberal and advanced education in all subjects might be of infinite value.

It may seem to you, as it seemed to us, a small thing to do in comparison with what we offered, and it is too early to say yet what will come of it. So far we have done little beyond exploring the ground. The important fact is that, if there is in any quarter a demand for public-school education on the part of classes which have hitherto not received it, the authorities of these schools are anxious to offer opportunities and, in conjunction with those responsible for national education, to find a way of satisfying the demand.

Meanwhile we are considering also, at Mr. Fisher's suggestion, what other forms of alternative or additional service we might render. He asked for our co-operation in the training of teachers and in the inspection of secondary schools. He asked the big public schools, when the choice is presented to them of inspection by one of the universities or by the Board of Education, to choose the Board, so that those who inspect the smaller secondary schools may have had experience also of the organization of the large public schools, and may act as a sort of clearing-house of ideas between the different types of school, enabling each to learn from the other, and the Board of Education, I hope, from both.

In all this we shall readily co-operate. Winchester was

inspected by the Board of Education this summer, and Charterhouse is about to invite them. In a variety of other ways opportunities of co-operation are being found. That splendid institution, the Workers' Education Association, owes much in various parts of the country to public-school masters, who give up many hours of their time to helping with tutorial classes and lectures. I hope, too, that some of the continuation schools which are to be started under the new Act may be associated with the public schools in one way or another. I know of one scheme in South London by which one of the old public schools hopes to lend for this purpose, not only a building belonging to the School Mission, but also the organization of the Boys' Club which meets there, and thus to associate with it the name, and something of the traditions, of the school itself.

In every way we are feeling after such a connexion with the growing national system as may enable us to do service, as far as possible, to all classes of the community, while preserving that individuality which is of the essence of our existence. But it is to be remembered that the so-called public schools are but few in number compared with the secondary schools of the country; and, however accessible they may be made to all classes, they cannot cater for more than a minority of the boys of Great Britain. They can best contribute to the service of national education by faithfully preserving whatever is best and most characteristic in their traditions and system, while welcoming every opportunity of co-operating with, and learning from, the new type of schools that the State is setting up. The two types must necessarily act and react on one another; masters will pass from us to them and from them to us, and our boys compete for the same examinations and mingle in the same universities.

The public schools have much to learn; they have also something to teach. They have evolved a method of education of whose essence it is that the school is an individual community, which embraces every side of a boy's life and not his lessons only. Its primary gift is the sense of membership; its characteristic mark is that, by means of strong public spirit, it teaches individual self-respect. If a school is not doing that, it is not, in the true sense of the word, a public school; but whenever it does, then, whether it was founded last year or three hundred years ago, whether called a public school or not, it has the root of the matter in it. In the middle of last century a number of schools were founded which sprung almost at once into the rank of public schools side by side with the old foundations—Marlborough, Wellington, Clifton, and many others. The big day schools, new or old, have shown that they can foster the same spirit. If those who are administering the new secondary schools of the country are working, as I know many of them are, with the same ideal, they are building up the public schools of the future, and the great contribution of the old public schools to the national system will have depended not on the boys they have admitted, but on the tradition and example which they have set for the whole of English education. We need not desire too great uniformity of system: what matter diversities of operation and administration, if there be the same spirit in all?

EVENING SCHOOL OF GEOGRAPHY.—Students desiring to join the Evening School of Geography at University College, London, should apply to the secretary as early as possible, stating in their applications the nature of the qualifications that they submit for admission to the course. The first term opens on Monday, October 4. Prof. E. J. Garwood will give a course of about fifty hours on the Physical Basis of Geography; Mr. M. T. M. Ormsby, a course of lectures and practical exercises on instruments and maps, with special reference to the use of plane table, prismatic compass, clinometer, aneroid barometer, and to the drawing of relief sections, the conversion of contour into hachure, and the cartographic expression of given data; and Prof. L. W. Lyde, a course of about thirty hours on a regional survey of the world, with special reference to economic geography. The University of London grants an Academic Diploma in Geography to students who have satisfactorily attended a course of study approved by the University.

EDUCATION AT THE BRITISH ASSOCIATION.

THE meetings of the Educational Science Section of the British Association at Cardiff, on August 24 to 27, were held under the presidency of Sir Robert Blair. For all engaged in teaching, whether in the school or in the university, the programme was most attractive. The excellence of the papers read, the wide scope of the discussions, and the inspiring nature of the proceedings generally, were thoroughly appreciated by all members of the teaching profession in attendance. The President's address opened out the possibilities and methods of a really national system of education, scientifically organized and maintained, and the papers read all combined in their various ways to elaborate such an ideal.

Sir Robert Blair, in his presidential address, dealt with two of the wider aspects of educational activities belonging to the spirit rather than to the form of the educational system:—(i) the science of education; (ii) the necessity for the closer association of the various educational institutions and the local authorities. He said that the moment had now been reached when education itself should be made the subject of a distinct department of science. When teachers have demonstrated that their art is in fact a science, then, and not till then, will the public allow them the moral, social, and economic status which it already accords to other professions. Educational science has hitherto followed two main lines of investigation: first, the evaluation and improvement of teachers' methods; secondly, the diagnosis and treatment of children's individual capacities. The key-note of successful teaching is to adapt the instruction to the individual child, and the needs and capacities of the individual child must first be discovered. The subjects taught and the method of teaching have considerably changed during recent years. Far less emphasis is now laid upon the disciplinary value of subjects, and upon an advance according to strict logical treatment with children of successive ages.

Increasing emphasis is being laid upon mental and motor activities, upon emotional, moral, and æsthetic activities, and upon freedom for individual effort and initiative. Three groups of Institutions—the Public Schools, the Universities, and the Endowed Grammar Schools—are national, but, with the exception of those grammar schools which have undertaken to bear their share in local work, they form no part of the national system administered by the local education authority. While control is obviously impossible, some direct and close association, rather than indirect and remote, is desirable; association in teaching rather than in administration. A further group—the efficient private schools—whether run for private profit or not, do reduce the provision to be made by the authority. They are, therefore, to this extent contributing to the public service, and in return the authority can confer advantages through close association with its organization. The spread of educational advantages is the hope of all, and all educational and social forces should concentrate in one national effort. It is our duty to develop the intelligence and the spirit of social service in our whole population in complete confidence that the solidity of the English character, fortified with such weapons, will maintain and expand that civilization which has brought us so far, and which we owe to posterity to hand on not only unimpaired, but broadened and deepened by new streams of thought and action.

Presenting a report on Training in Citizenship, Bishop Welldon emphasized the great need for systematic training at the present time. He maintained that education is of little value without a true conception of citizenship.

The secrets of public school spirit—duty for duty's sake; to play the game; success or honour of the school in work and play—are not limited to those schools. A noble state is built only on the basis of noble private lines. The interest of the nation demands unity of the nation without sectionalism. A comprehensive syllabus, and a description of schemes now being worked in various types of schools in different parts of

the country, was supplied with the report. He hoped that it would be possible, with the sanction of the Association, to publish a handbook following the syllabus.

An interesting discussion, most helpful to teachers, followed. Sir Napier Shaw referred to the meaning of citizenship and our present training for it. He would say that "Love of power is the root of all evil"—power to create or destroy. Man is a social and a destructive animal, and a basis of our social order should be that of the limiting of destroying power.

Mr. Spurley Hey's paper on "The Supply of Teachers" gave facts, criticisms, and suggestions, which should weigh heavily in the minds of both administrators and teachers. His figures fully proved how serious the shortage was in quantity, and, to a lesser extent, in quality also. He frankly criticized the Board of Education, whose policy in 1907, of constituting the secondary school as an almost exclusive avenue for teachers, had seriously hampered the supply; the local education authorities for not conserving their own supply; and the teaching profession for its apathetic and sometimes hostile attitude to the creation of a new supply. He appealed to the profession to replace selfish interests by national interests, and to the missionary spirit of social service. He advocated a more generous system of grants for intending teachers, and the institution of penalties for local education authorities who failed in their duty, and advised the appointment of administrative recruiting officers to get in touch with the elementary schools and to encourage the pupils to enter the profession.

Admirable papers on "The Relation of Schools to Life" were given by Mr. A. Linecar, Mr. J. M. McTavish, Mr. R. A. Bray, and Miss Strudwick.

Mr. Linecar urged that schools should induce capacity for life before inducing ability to earn a livelihood. He advocated a general principle governing all school work, such as "Induce in pupils the power of concentration of mind." Multiplicity of subjects would then disappear; we should have instead various postures of one endeavour. He described one school worked on this plan, the change from stolidity, strict discipline, and extreme accuracy, to an enthusiastic spirit of endeavour.

Mr. McTavish spoke from the Workers' Educational Association standpoint and made a powerful plea for the study of the problem of civilization. He said that all pass through adolescence; therefore all require education of a suitable nature (secondary education).

Mr. Bray dealt with the problem as viewed from the industrial aspect. He argued that the workshop must carry on the influence and ideas laid down in school life. The Education Act transformed "youthful workers" into "youthful workers in training," but the tendency of industry was still to regard them as adults. The duty of the schools is not to prepare the child for industry, but rather industry for the child.

Miss Strudwick's paper appears in full on another page.

At a joint meeting with Section E (Geography), Prof. J. L. Myres, in a paper on "The Place of Geography in a Reformed Classical Course," referred to the necessity of a drastic revision of classical teaching following the recent decision concerning compulsory Greek, and suggested an earlier acquaintance with ancient conduct and thought. The Mediterranean region was exceptionally suited to supplement, by contrast, homeland notions of geography, and being also the physical cradle of those ancient cultures, Hebrew and Graeco-Roman, which have most influenced our own; reformed "classical education" could well begin by illustrating, through ancient narrative and description, in translation, man's behaviour under these conditions, and his solutions of social and moral problems.

Dr. Vincent Naser's paper on "The International Intellectual Relations," stressed the importance of organizing students of varying nationalities at all the universities and of establishing local bureaux of information, under the supervision of university authorities.

At a joint meeting with the sub-section of Psychology, Prof. T. P. Nunn, in a paper on "The Tendency towards Individual Education," made a fascinating appeal for a greater

place for individuality in the educational methods in schools, and, in the words of the President, left the meeting with an appetite for more. He pointed out that education must effect a *modus vivendi* between two principles:—(1) that of "mental discipline," and (2) that of spontaneity, which requires the pupil to be his own educator. The second implies that the individual pupil is the proper unit for instruction, and that he should be free to go his own way at his own speed. For young children Dr. Montessori has solved the problem. For older pupils it challenges our school traditions and institutions, and involves a reconsideration of time tables and classes roughly on an age basis. The regular classes would have to be largely disbanded, and the pupils peripatetic.

Prof. G. H. Thomson's paper on "Do the Binet-Simon Tests measure General Ability?" gave an interesting account of the controversy on this question and of the various factors involved.

Dr. C. W. Kimmins followed with a paper on "The Dreams of Children who are physically Abnormal." He presented the subject as a valuable and fascinating field for research, and aroused much interest and enthusiasm. His comparison of types of dreams came as a revelation to many.

A very valuable report, by a special committee, on "Museums" was presented by Mr. H. Bolton. The place of museums in our educational system is now receiving great attention, and an endeavour will be made to publish the report, so that the teaching profession can consider the suggestions made and the information supplied.

The last morning session was taken up with four illuminating papers on The Universities, The Public Schools, The Training Colleges, and The Technical Schools, in a National System of Education. As was expected, the subjects attracted a crowded meeting.

The Right Hon. H. A. L. Fisher gave a survey of the present position of universities, the functions they had to perform, and the obstacles they would be compelled to overcome. The need for higher learning, he said, had never been more real or more keenly felt than to-day. He invited them to consider the general influence which universities exercised in promoting a spirit of liberal inquiry, as opposed to that rigid and exclusive system of dogma which centuries ago was the product of intolerant clericalism. Community of knowledge was the only form of communion to which no objection could be taken on the ground that it was visionary, or unstable, or practised with difficulty: it was also a prime condition of health and wellbeing.

In a democratic state, if it were a cardinal requirement of modern civilization that a career should be open to talent, then it followed that the universities should play a much larger part in the life of the people than historical accidents had hitherto assigned to them.

More than twenty-five thousand ex-Service men were now undergoing some form of higher education in universities and colleges, with the assistance of Government grants. The most significant feature of this was the fact that these students were children of parents who, without state assistance, would never have contemplated a university career for their sons. Their admission within the charmed circle would have the effect of spreading the university idea into distant social recesses never before touched by the arms of higher learning.

As research departments developed, a greater number of students from Canada, Australia, and South Africa would come for the advanced courses. Another form of recruitment would be provided in time by the development of new secondary grant-aided schools. It was to the universities that they must look for their highly trained men of affairs as well as for leaders in every branch of professional life.

The country needed more teachers for universities and secondary schools, and the quality of education given to the rising generations would depend upon the extent to which universities were enabled to put their impress upon these teachers. They might reasonably expect that universities should train principals and teachers of training colleges, should supply all teachers in secondary schools, and most of those in the continuation schools.

A university should succeed in some way or other in giving to all the more generous minds falling within the range of its influence, the notion of learning as a thing worth pursuing for its own sake, and as one of the highest ends which presented themselves to the efforts and the aspirations of mankind.

Mr. F. Fletcher then dealt with the Public Schools; his paper appears in full elsewhere in this issue.

Miss H. M. Wodehouse urged that it was most desirable that training colleges should be widened by amalgamating the training of teachers with other work—physical training, arts, crafts, agricultural, engineering, preparation for business, or secretarial work for social service and the like.

Principal J. C. Maxwell Garnett, in a speech delivered with fine force and assurance, elaborated his suggestion for the development of technical education and its proper co-ordination with schools and universities. His scheme, well thought out and illustrated by diagram, revealed him as an able enthusiast. He stated emphatically that it could easily be carried out at a total cost of one-tenth the annual drink bill, even though it presupposed maintenance allowance to pupils up to £150 per annum.

The proceedings closed with a visit to the Barry Summer School established by the Glamorgan County Council. The school draws teachers from all parts of England and Wales and from almost every type of school. This year some six hundred were in attendance, and they were seen working in full swing. The visit advanced the view that the Summer school has earned a well recognized position in a national system of education.

UNIVERSITIES AND SCHOOLS.

WALES.

As the result of a report from the University Grants Committee, the Treasury have made a special non-recurrent grant of £5,000 to this College to meet the initial expenditure, and an annual grant of £3,000, with the proviso that it is a grant in respect of grants which will ultimately be made to the University of Wales on the basis of a pound for a pound from the rates. The Swansea College has therefore been treated on the same lines as the other colleges in Wales. In some quarters there exists a strong feeling that immediate action should be taken to secure for the Welsh university colleges more generous treatment, as it is most unfair that English university colleges should be treated much more liberally by the Treasury. The Council of the College have appointed Prof. F. Bacon, from the Cardiff University College, as Professor of Engineering. The College is, therefore, fully equipped for the work in the departments of science and technology for the coming session.

The report of this committee has been completed, but no official information has been allowed to transpire as to its contents. According to the newspapers, the committee recommend the creation of a Welsh National Council to control all forms of education, and that school fees shall be abolished in secondary schools. If these surmises are correct, our secondary system will be very radically transformed, and many very interesting problems will arise. It will, however, be safer to wait for the publication of the report before indulging in any comments.

The results of the July examination have been published with commendable promptitude again this year, and in sufficient time to allow the successful candidates to make arrangements for entering the university colleges, should they so desire, at the commencement of the session. The senior certificates were awarded in accordance with the regulations laid down by the Examination Council, and many pupils were rather surprised to find that they were on the list of successful candidates with only two or three subjects endorsed on the certificate. They are at present somewhat mystified by the "group" method of passing. No statistics are available as to the percentage of passes, so that no comparison is possible as yet with previous years. It will be interesting to note the effect of the new system of awarding certificates on the general result, when this information is made public.

SCOTLAND.

In his annual report on the training of teachers, Mr. J. C. Smith, the Chief Inspector for Training Colleges, discusses the perturbing problem of supply with his usual vigour and clarity. If

The Supply of Teachers.

he fails to say anything that really takes the discussion further forward it is obviously because officially he cannot, or will not, face any considerable departure from the present system. He begins by postulating the need for six thousand to seven thousand new teachers, in addition to those required to make good normal wastage, and analyses the character of the supply needed for the several groups of pupils to make effective the Act of 1918. But his practical suggestions go no farther than some minor modifications in the terms of entrance to allow pupils to have a shorter training as junior students, or to dispense with this training altogether by adding a term to the present two years' course as senior students. Neither of these changes will add much to the supply.

In defending the *status quo*, Mr. Smith attempts to re-state the case for the junior student. It is an open secret that many of the teachers responsible for junior student centres have lost their faith

The Junior Student System.

in the system under which they work, as the strictures passed on it at the recent Edinburgh Congress showed. Mr. Smith argues that the prejudice against it is not due to inherent defects so much as to the greater esteem in which the Leaving Certificate course is held. He admits two serious objections: that it obliges boys and girls to make too early choice of a profession, and that the subjects of instruction are too numerous, or, at least, are spread too thinly over each year of the course. He agrees, in regard to the former, that it is not good to force or lure young people into the teaching profession if they have no vocation for it, and he intimates that the Department mean to meet the difficulty by leaving the door open a little longer, and enrolling candidates who have obtained the Leaving Certificate for a two years' course, *plus* a term. Regarding the criticism that the junior student course is overcrowded, he suggests the "condensation"—whatever that may mean—of science, drawing, and needlework into one or two years of the course. He anticipates that with such relaxations the junior student system will be found superior to any of the suggested alternatives for its specific purpose. But it is doubtful whether he will persuade teachers of this. There is a growing conviction that it is part of a plan for the production of second-rate teachers, good enough for infant and junior classes but not for higher work. Hence the demand that it come to an end, and that whatever training be given before entrance to the colleges should come after the Leaving Certificate and have as its main function the discovery of the pupils' probable fitness for a teaching career.

Mr. Smith does not shirk the awkward fact that the existing system is suspect among teachers. The issue, he contends, has been obscured by a too strong insistence on the solidarity of the teaching

The Two Years' Training.

profession, based chiefly on the analogy of medicine. Those who argue in this way overlook the fact that there are grades in the teaching profession to which nothing in the medical profession corresponds. Not only are there distinctions between teachers of general, special, and higher subjects, but even among teachers of general subjects distinctions exist, of which the most obvious is that between those (mostly men) who make teaching their life work, and those (mostly women) who take it up for a few years. The majority of the women, he goes on to say, are employed for a few years in infant and junior classes before marriage, and it is not seriously contended that they are incompetent for the work they do in the schools. In their case, the two years' course, preceded by three years in a junior student centre and followed by two years' probation, is quite good enough. Now in all this argument Mr. Smith may be right. But if he is to get his six thousand or seven thousand extra teachers, he has not only got to persuade the existing teachers, but he has got to make them so enthusiastic about the matter that they will exert themselves to get recruits for the profession. He must know that the prospects are not rosy. As a matter of fact, his frank statements about the women teachers have created a good deal of indignation, especially among the large body of women who have not found teaching a pleasant interlude between school and marriage; and there is a widespread disagreement, on the part of teachers, with his views on the permanence of the present gradations inside the profession. He will have to reckon with this in his campaign for more teachers.

If Mr. Smith could have been present at the mass meetings of primary teachers held in Perth and Glasgow at the beginning of the month he would have seen for himself the strong feeling that exists on the part of the rank and file of the profession in the matter of solidarity. The Primary Teachers' Provisional Committee, under whose auspices the meetings were held,

The Primary Teachers' Movement.

was a direct outcome of the sense of wrong engendered by the discrimination between graduates and non-graduates in the minimum national scales, and the desire for a removal of the difference in payment is still the most definite plank in its programme. But it has broadened its basis, and is now out for equal treatment for all teachers, both in salary and conditions. It asks for a maximum of thirty pupils in any class and as good equipment for primary classes as for secondary. Above all, it is bent on making an end of those differences in training which have broken up the profession into superior and inferior sections. There was more heat than light at both meetings, and that, indeed, is characteristic of the whole movement. There is no evidence of special capacity in the leadership, and practical ideas are scarce. But whatever is wanting it is not conviction in regard to the evils that are to be fought. That is the danger of the movement. In the absence of constructive ideas it may readily be a power for evil. But, whether for good or for evil, it is going to be a power. This has already been seen in voting for the representatives of the Institute on the Joint Council of teachers and authorities; and it was evident, too, in the appearance of a resolution on the agenda of the annual meeting of the Institute, urging that there should be only one means of entrance into the teaching profession, and deprecating any suggestion that future teachers with a two years' training should be considered sufficiently qualified for any of the departments in the schools. If the primary teachers really mean that, there will need to be drastic changes in the scheme of training before the extra teachers are forthcoming. Meantime the Institute runs serious risks of a cleavage between its primary and secondary members. The principle of equality is applied by the former to salaries. Their ideal scale is £250 rising by £20 to £500 for all recognized teachers, with £50 additional all through for secondary teachers. If the primary people try to force that on the Institute—as they can do if they unite—it is certain to be resented by the secondary teachers.

Those who condemn a movement like that of the primary

Vacation Classes.

teachers as inspired by sordid money motives, would do well to note the great zeal for a continuation of their own education which animates teachers just now. Surely a greater number of Scottish teacher-students have never attended classes than have done so this summer. Not only has there been a large enrolment at the usual classes for special subjects under the Provincial Committees, but there has also been a very exceptional patronage of the classes on a university standard held in Edinburgh University. Over five hundred teachers followed the courses on the ordinary M.A. level, and 144 undertook more advanced studies. In addition to this, large and enthusiastic classes in Gaelic studied under the leadership of university teachers in Glasgow and Inverness. All this is very much to the credit of the profession. But is it not a serious reflection on the previous education of the teachers? It is all very well to utter nice sentiments about teachers always remaining students, but the plain fact of the matter is that most of the people who went to these summer classes should have got the work they are doing now out of season in the course of their education and training. Vacation classes at the best are apt to be a third-rate substitute for timely study. In any case, attendance at the classes too often involves a considerable strain on energies which have been sapped by a year's teaching. The moral, surely, is that future teachers should be so well prepared for their work that the classes they take will be luxuries, and not, as with present teachers, an unfortunate necessity.

Dr. John Davidson has been appointed Director of Studies to

The Provincial Committees.

the St. Andrews Provincial Committee, in place of Mr. Malloch, who has been made Secretary of the new Central Committee for the Training of Teachers. Dr. Davidson has won golden opinions as Master of Method in St. Andrews during the last twelve years. The appointment is an excellent one.

The Glasgow Provincial Committee has taken the wise step of arranging that the students in training under its charge get a month of continuous teaching in schools near their own homes before starting the ordinary work of the winter. It is to be expected that this course, which was advocated in Edinburgh at the Institute Conference on the training of teachers, will be adopted and extended by the four local committees. The lack of opportunities for responsible teaching over a fairly long period has been one of the obvious defects of the present system of training.

IRELAND.

The new educational year has not opened very auspiciously.

A Critical Position.

There has already been a strike of teachers in a leading Protestant intermediate school in Dublin. Many schools are feeling the loss of

(Continued on page 672.)

KINGS TREASURIES OF LITERATURE

General Editor: Prof. Sir A. T. Quiller-Couch

- ☞ A comprehensive new Series of English Literature (including Translations) for all Grades, from Preparatory School to Upper Forms. Consists of Standard Texts and Volumes by modern authors—including Conrad, Hardy, Tolstoy, Anatole France, Sir Henry Newbolt, Walter de la Mare, W. H. Hudson, Stopford Brooke, &c., &c.
- ☞ The King's Treasuries are cloth-bound, pocket size, clearly printed on good paper, and are issued at 1s. 6d. net, and 1s. 9d. net for the longer or copyright volumes.
- ☞ The Editing embodies all the newest ideas on the teaching of English Literature, and is suitable, not only for general reading, but also for the newer type of examination. Nearly all the volumes contain questions and literary exercises of a very interesting character, designed to encourage class discussion on the subject matter. Some contain composition exercises (oral and written), as for example: **ANDERSEN'S TALES, A WONDER-BOOK, and THE HEROES**, and in this respect these volumes differ entirely from the ordinary editions, forming complete study manuals as well as delightful reading books.

List of the Volumes Now Ready.

PROSE AND POETRY from the Works of Sir HENRY NEWBOLT. Selected by the Author.

Price 1s. 9d. net.

YOUTH, and GASPAR RUIZ. By JOSEPH CONRAD. With Portrait of the Author. 1s. 9d. net.

SESAME AND LILIES. By JOHN RUSKIN. Edited by SYBIL WRAGGE, Armstrong College, Newcastle-on-Tyne. 1s. 6d. net.

THE LORE OF THE WANDERER. An Anthology of the Open Air. Compiled by G. GOODCHILD and Edited for Schools by F. W. TICKNER, D.Litt., B.Sc. 1s. 9d. net.

KING RICHARD II. By WILLIAM SHAKESPEARE. Edited by RICHARD WILSON, D.Litt. 1s. 9d. net.

ALPHA OF THE PLOUGH. Selected Essays from *Pebbles on the Shore and Leaves in the Wind*. Epilogue by S. E. MALTBY, M.A. 1s. 9d. net.

FORM-ROOM PLAYS, Junior Book. Compiled from English Literature by EVELYN SMITH, High School for Girls, Glasgow. 1s. 9d. net.

A WONDER-BOOK FOR BOYS AND GIRLS. By NATHANIEL HAWTHORNE. Edited by E. M. WILMOT BUXTON. 1s. 6d. net.

THE LAY OF THE LAST MINSTREL. By Sir WALTER SCOTT. Edited by H. J. FINDLAY, M.A. 1s. 9d. net.

J. M. DENT & Sons, Ltd., Aldine House, Bedford Street, London, W.C. 2.

some of their best teachers, whose places cannot be filled. There is grave dissatisfaction with the position of Irish education as compared with Great Britain, and the Intermediate Board of Education, which has published its report for the past year much earlier than usual, exhaust the gloomy adjectives of the English vocabulary in trying to impress upon the Government the seriousness of the situation. And it is indeed critical enough. We are not by any means in the same frame of mind as we were a year ago. Then we faced the new year full of hope. Now we have learnt a lesson of disillusionment, and we face this coming year

"With thin-lipped patience for our only friend,
Sad patience, too near neighbour to despair."

The Intermediate Report offers no opinion on the Education Bill, but deals in some detail with the financial situation. Its criticisms are too long to quote in full, but some extracts will show their point of view. "The position (of Irish secondary education financially) is extremely critical and threatens a very serious breakdown throughout the country if ameliorative steps are not immediately taken. In our reports for the last three years we have emphasized the importance of increased grants, and have further, with ever increasing stress, called attention to the matter in a long series of letters to the Irish Government. The reply finally given to our repeated requests was that 'the settlement of the matter awaits the passage of promised legislation.' Almost eight months have passed since this reply was given; but the legislation is still in exactly the same position as it then was. Meantime matters have been getting steadily worse in the schools, and a complete collapse seems to be not far distant." "Out of a total of 1,349 lay teachers, only a hundred are in receipt of a salary of £200 per annum, and of these thirty-one are heads of schools; while about 30 per cent. of the whole number of lay teachers are in receipt of salaries of less than £100 per annum. The state of the majority of the assistant teachers can, therefore, be imagined when it is remembered that the purchasing value of £200 to-day is equivalent to that of about £80 before the war." "Already during the present year many schools have been compelled to stop the teaching of important subjects which had formerly figured in their curriculum, because they could not get a single applicant for the vacant post." "Recently an important and valuable step was taken by the establishment of a Register of Intermediate School Teachers in Ireland. At the very beginning of its career the Register is threatened with extinction, for it is almost ludicrous to suppose that men and women will go through the course of training necessary to qualify for registration while the conditions and prospects remain as they are at present."

The Report further points out that as the income of the Board is fixed, and as establishment charges must be met before what remains can be distributed as grants to the schools, the grants have necessarily decreased, since the cost of establishment (postage, travelling, printing, salaries, &c.) has inevitably increased. In fact, the schools received £10,000 less than two years ago. In 1917-18 the grants amounted to £141,038, in 1918-19 to £135,143, and in 1919-20 to £130,458. The Board point out that the cost of administration should in Ireland, as in England and Scotland, be borne by the Treasury, so that the school grants should not suffer in this fashion. They claim that in accordance with the Government's promise they "should receive an addition of about £140,000." The Report concludes: "One of the features of the post-war period throughout the whole civilized world is the emphasis which is being placed upon the urgent necessity for more and better education. It is in such circumstances deplorable that the educational system in Ireland, far from having a chance of improvement, is at the present moment face to face with ruin. The situation is one which, in our opinion, demands the most careful and immediate attention from His Majesty's Government." As the Report is dated June 30, it was drawn up before the latest grant of £50,000 was made in August. It is to be hoped that this is an earnest of the Government's intention to comply with the wishes of the Board. The grant is for the past year and will do something to increase the salaries for 1919-20, but we have no statement of what will be forthcoming for the present year, and the whole question requires to be settled on lines that offer a permanent solution.

Apart from this trenchant criticism, the Report contains the usual tables and summaries dealing with the Board's work. We note that the Register of Intermediate Teachers up to the end of 1919 contained the names of 2,159 teachers, of whom 244 were registered during that year.

The results of the intermediate examinations, which were held last June, were published towards the end of August. The summary of these results is as follows:—

Intermediate Examinations.

Grade,	Boys.			
	Senior.	Middle.	Junior.	Total.
Number Examined.....	1,133	1,989	4,346	7,468
Passed with Honours.....	142	252	369	763
Passed without Honours	488	689	1,941	3,118
Total	630	941	2,310	3,881
Percentage of Passes	55.6	47.3	53.2	52

	Girls.			
Number Examined.....	590	1,308	3,402	5,300
Passed with Honours.....	76	156	240	472
Passed without Honours	237	412	1,325	1,974
Total	313	568	1,565	2,446
Percentage of Passes	53	43.4	46	46.2

The exhibition and prize lists were published as usual on the second Saturday in September. The lists contained only the numbers, and not the names, of the successful candidates, so that the old-time, often unfair, comparison of schools is no longer possible. They may be summarized thus:

Boys.						
Group.		Modern		Maths.	Science.	Total.
Senior Grade.	Classics.	Literary.

The place of Dr. Tarleton, who died in July, has been filled by the appointment of the Rev. Major-General John M. Simms, C.B., C.M.G., D.D., to be a member of the Intermediate Education Board for Ireland. The place of Dr. Starkie has not been filled, nor has a new chairman yet been appointed.

SHAKESPEARE PLAYS.—The Royal Victoria Hall, Waterloo Road, S.E.1, began its eighth Shakespeare season on Saturday evening, September 18, with a performance of "A Winter's Tale." The season promises to be an exceedingly interesting one. Before Christmas, "The Merchant of Venice," "King John," "As You Like It," "Twelfth Night," "King Lear," and "The Taming of the Shrew" will have succeeded "A Winter's Tale"; and a strong company of Shakespearean players, including several "Vic." favourites, with Mr. Robert Atkins as producer, has been engaged.

PRIMARY SCHOOL NOTES.

The Burnham Committee and its Work.

WITH the issue of the further reports dealing with the scales of salaries of primary school teachers working in different areas the main function of the Burnham Committee has been fulfilled, though its existence will doubtless continue for some time in order to adjust points of interpretation in the rendering of its reports. Whatever may be the opinion of the parties concerned as to the fundamental soundness of the principles which inspire the later salary scales of the Committee, there will be general agreement that the first report, dealing with the question of a national minimum scale of remuneration for teachers, was practical in conception and far-sighted in outlook; for it presented a solid basis upon which every local education authority in the country could build suitable schemes for its particular needs. That some local authorities, on the one hand, opposed the minimum scale on the score of its generosity, while considerable sections of teachers, on the other, condemned it on account of its parsimony, does not diminish in any degree its remarkable administrative utility. At a crisis in the life of the nation, when the entire future of education lay trembling in the balance, it was the wise moderation of this committee of teachers and administrators which saved the situation, for it demonstrated to the public in clear and emphatic terms that the teachers had deserved well of their country and that the common good demanded an unfailing supply of well-trained teachers who should be adequately remunerated.

Defects of the New Scales.

It was inevitable from the outset that any proposal to vary the salaries of teachers working in different areas would arouse opposition from teachers and education authorities. The scale of the National Union of Teachers, confirmed in full conference, is the same for all parts of the country; and where there are different scales in operation in schools which lie on either side of an administrative boundary the gravitation of teachers to the service of the better paid service must constitute occasions of friction between school authorities. The proposal to sanction differential rates will no doubt raise immediately an energetic controversy among members of the National Union of Teachers: there are clear indications that it has already begun. The proposal that the highest scale of salaries shall be adopted only with the sanction of the Burnham Committee, is one which directly challenges the authority of local education authorities. In view of the growing representation of labour upon local authorities it is quite possible before long that certain education committees will concede to teachers as a matter of principle the scale of their professional union; and, as this scale is somewhat in advance of Scale IV of the Burnham report, a somewhat interesting position may develop. The fact that certain associations of teachers have already accepted Scales III and IV of the Burnham Committee before these have been confirmed by the National Union of Teachers as a whole, shows how far the process of decentralization has proceeded in the Union. In view of the circumstance that the Union stands committed to a definite national scale of salaries, it seems fairly certain that its domestic policy will have to be reviewed at an early date. The fatal defect of the provisional minimum scale in making no allowance for the increased cost of living marks the supplementary scales. So steep has been the increase of late that the supplementary scales are already out of date. At the moment it appears to be doubtful whether the official scale of the National Union of Teachers would meet the economic needs of teachers.

National Union of Teachers.

THE address delivered at Edinburgh by Miss J. Wood, B.A., President of the N.U.T., on "The Influence of Education on International Peace," illustrates the feeling entertained alike by the Educational Institute of Scotland and the N.U.T. in support of the principles adopted by the League of Nations Union. That these principles are not officially proclaimed in the schools on propaganda bases does not imply that they are in any way neglected. There are no stronger advocates of these principles than members of the N.U.T., and much quiet and devoted service is rendered daily in the cause of peace and goodwill. The Thankoffering Fund of the Union now exceeds £80,000, while the membership as indicated by the number of paid up subscriptions is 29,636 as compared with 5,107 at the corresponding period of last year.

Pitman's Books**A Selection of Modern Readers.****The Mastery of Earth.**

A fine reader for boys of 12 to 14 years, telling how man has acquired a "mastery," both in the sense of understanding and in the sense of using elements for his own benefit. Where necessary, this interesting reader gives adequate explanation, and supplies such history as is desirable. Fully illustrated. 3s. net.

The Mastery of Water.

A companion volume to "The Mastery of Earth." The author has endeavoured to present the subject as a vital force in field, factory, and mine. Fully illustrated. 3s. net.

The Wants of Man.

By T. W. BOWTELL, M.A., B.Sc.

A junior economic reader. Each chapter is written in a clear interesting style which will appeal to young readers. The numerous illustrations and useful test questions form a valuable feature. 3s. net.

The Triumph of Man.

With 130 illustrations. A reading book for boys and girls from 12 to 16 years old. Contains a simple account of wind, water, steam, and electricity, and their applications; of iron and steel and their uses, &c. With over 130 illustrations. 2s. net.

The Model Citizen.

By H. OSMAN NEWLAND.

A simple, full, interesting, and accurate account of the rights and duties of the citizen, with a description of public institutions—local and national—in relation to the life of the individual and the community. With 50 illustrations. 1s. 8d.

The True Patriot's Book.

By ORME AGNUS.

The object of this book is to make the children intelligently proud of their country, and to encourage the instinct to serve it. With 39 illustrations. 1s. 9d. net.

Our Food Supplies.

By F. W. CHAMBERS.

In a complete series of lessons, the growth, preparation, and marketing of all common foodstuffs are dealt with. 2s. 6d. net.

Our Manufacturing Industries.

A splendidly illustrated intermediate reading book dealing with the chief branches of modern industry. 3s. net.

An Introduction to Modern Commerce.

"Fifty lessons of engrossing interest exhibiting the main aspects of business, public and private, and effectively and lavishly illustrated."—*Educational Times*. 2s. 6d. net.

The World and Its Commerce.

Contains simply-written chapters on the general geography of the world, the seven great industries, the commercial geography of the British Empire at home and abroad, and of foreign countries. With 34 Maps. 2s. 6d. net.

PRIZE COMPETITIONS.

THE prize for the September competition is awarded to "Fidelio," and the second place to "Esse quam videri."

The winner of the July competition is Miss Myra Dobson, 18 Victoria Road, Exmouth; of the August competition, Mr. P. O. Macdonald, Glencoe, Frinton-on-Sea.

Extract from Th. Gautier's "Voyage en Russie."

By "FIDELIO."

MOSCOW.

Moscow is said to contain more than three hundred churches and convents. Whether this statement be literally correct, or merely the language of hyperbole, we know not; but to any one looking down on the city from the highest part of the Kremlin—which itself contains a great many cathedrals, chapels, and other religious structures—the former seems quite probable.

No dream could show anything grander, anything richer in fairy-like beauty, than this scene: those cupolas surmounted by Greek crosses; those bulb-shaped bell-turrets; those spires, hexagonal or octagonal, with their various devices of ribbing, moulding or open-work, dominating in their rounded bulk or funnel-like expansion or tapering slimness the motionless, tumbled throng of snow-covered roofs below. Wondrously transparent reflections are given back by the gilded cupolas, and wherever a point projects there the light gathers into a star, shining beacon-like. Looking on those of the domes that have a silvery gleam, you fancy that such may be the *coiffure* of churches in the moon; while those farther off suggest azure morions starred with gold; or skull-caps made of copper-plates closely overlapping, like a dragon's scales: or, let us say, bulbs painted green, that have caught a stray flake of frosted snow, and been turned topsy-turvy. Then, as the definite features retreat more and more from your gaze, so that the details escape even your field-glass, all you can distinguish at last is a sparkling confusion of domes, spires, towers, and belfries of every imaginable shape, silhouetted on the bluish tints of the far distance, with every projecting part designated by a spangle of gold, silver, copper, sapphire, or emerald. And, if you would have the picture complete, you

must imagine here and there, on the blue-tinged coldness of the snow, faintly-empurpled streaks of light, pale roses of the polar sunset strewn on the ermine carpet of the Russian winter.

The passage from Gautier was difficult, and we are not surprised that it produced only a small field. To understand his description thoroughly, one needs to have some pictures of Russian churches in front of one, and few competitors probably had that advantage. Of the words *s'arrondissant*, *s'évasant*, *s'aiguissant*, the first two apparently refer to *les coupôles* and *les clochetons*, the last to *les flèches*; it cannot be said of any of these structures that it bulges out and also tapers to a point. "Funnel-like expansion" in the prize version is loose; there is nothing like a funnel on Russian churches. "Dominating," too, is hardly contained in the French; what is subtly hinted at in the sentence is rather the contrast between the suggestion of life and movement in the spires and cupolas and the immobility of the snowy roofs. *Reflet* is always a difficult word. Strictly speaking, it means "reflection," but, as all light from an object is reflected light, it is frequently equivalent to "tracts of light," "spaces of colour." "Esse quam videri" had "The gilded cupolas assume a marvellously diaphanous appearance," which seems to us at once neat, correct, and intelligible. For *imbriquées* "imbricated" was frequent; why such a dictionary word instead of the plain Anglo-Saxon "overlapping"? *Oignons renversés* is a puzzle: to us the domes of a Russian church look more like bulbs the right way up. Again, the picture drawn in the words *dessinant . . . d'émeraude*, the structures showing their outlines in shadow, while their projections (*saillie*) are lit up, is not easily imaged in the mind. One cannot help thinking that Gautier here sacrificed clearness to effect.

The *grand nombre* of the first sentence is an exaggeration. The Kremlin contains three cathedrals and three or four other ecclesiastical buildings; on the other hand, the *plus de trois cents* is certainly not *hyperbolique*.

The prize-version was, on the whole, the best, but it is a little too verbose; "beacon-like," for instance, is unnecessary, and *coiffure* is a bad blot.

We classify the 63 versions received as follows:—

Class I.—(a) Fidelio, Esse quam videri, Borealis, Bésigue, Garnet, Menevia, Fiasco, Griselda, Bobemond.

(Continued on page 678.)

GEORGE GILL & SONS, LTD.

Important.

Geometrical Drawing and its Practical Application.

By A. E. HOLBROW, A.R.I.B.A., M.S.A. Price 2s.

In the preparation of this work on Geometrical Drawing, every effort has been made:—

- (1) To produce a simple textbook of the subject.
- (2) To apply the work to everyday use and practical necessities.
- (3) To utilize the equipment necessary, the subject drawn, and the observations made and recorded for the benefit of co-ordinated subjects.

The chief features of this publication include, amongst others, sections on:—

Simple Problems with Practical Application—i.e., Measuring obstructed lines in the field, Angle Measuring in the open.

The Use of the Theodolite, The Plane Table, &c., Quadrilaterals, Areas, The Ellipse, &c., Solids and Simple Projection, and Workshop Drawings.

This book has been approved by all who have examined copies. If you are interested in the subject, please ask to see a specimen copy before making your final selection.

LA MÉDISANCE.

Allons encore plus loin : ce qui met le comble à la lâcheté de ce vice, c'est que, non content de vouloir plaire et de s'ériger en censeur agréable, il veut même passer pour honnête, pour charitable, pour bien intentionné ; car voilà l'un des abus les plus ordinaires. Permettez-moi de vous le faire observer, et d'entrer avec vous dans le détail de vos mœurs, puisqu'il est vrai de ce péché ce que Saint Augustin disait des hérésies, qu'on ne les combat jamais mieux qu'en les faisant connaître. Voilà, dis-je, l'un des abus de notre siècle. On a trouvé moyen de consacrer la médisance, de la changer en vertu, et même dans une des plus saintes vertus, qui est le zèle de la gloire de Dieu : c'est-à-dire, qu'on a trouvé le moyen de déchirer et noircir le prochain non plus par haine ni par emportement de colère, mais par maxime de piété et pour l'intérêt de Dieu. Il faut humilier ces gens-là, dit-on, et il est du bien de l'Eglise de flétrir leur réputation et de diminuer leur crédit. Cela s'établit comme un principe : là-dessus on se fait une conscience, et il n'y a rien qu'on ne se croie permis par un si haut motif. On invente, on exagère, on empoisonne les choses, on ne les rapporte qu'à demi ; on fait valoir ses préjugés comme des vérités incontestables, on débite cent faussetés, on confond le général avec le particulier ; ce qu'un mal dit, on le fait dire à tous ; et ce que plusieurs ont bien dit, on ne le fait dire à personne : et tout cela encore une fois, pour la gloire de Dieu. Car cette direction d'intention rectifie tout cela. Elle ne suffirait pas pour rectifier une équivoque ; mais elle est plus

que suffisante pour rectifier une calomnie, quand on est persuadé qu'il y va du service de Dieu.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on October 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

VACATION COURSE IN EDUCATION AT OXFORD.—The course was attended by 142 students, the majority of whom were men. About forty attended in order to qualify by residence for taking the examination for the university Diploma in Education. In each week special emphasis was laid upon one main group of subjects—history and geography, mathematics and science, Latin and French, English and æsthetics—under the direction of specialists, usually from outside. Lincoln College kindly gave resident accommodation to men students, and Balliol College to a limited number of women. In discussions great sympathy was shown for all methods tending to encourage the free activity of the pupil, whether in the classroom or outside, but the general feeling was that experiments in "self-government" should be made with caution and in a severely critical spirit. It was felt that all methods and standards resting on convention or tradition, or upon a merely antiquarian view of learning, should be swept away. Education must be judged solely by its effects on the life of the individual and of the community. All were agreed that any good system of training must demand the closest co-operation between the schools and the universities, and must include a thorough study of the theory and history as well as of the practice of education. The opening address was given by the Head Master of Eton.

A FEW OPINIONS OF THE PRESS*"A publication which must claim the serious attention of every student of educational progress."*

—THE TIMES

"The best record of English Educational Thought and Practice."

—MONROE'S CYCLOPÆDIA OF EDUCATION

"The comprehensiveness of its survey of the educational field is well known. Moreover, it is written throughout by those who have an intimate acquaintance with the subjects of which they are treating."

—THE GUARDIAN

"Besides being a useful record of the educational events of the year, it forms a valuable miscellany of essays and general articles interesting to teachers."

—THE SCOTSMAN

"Continues to occupy the premier position. It has unrivalled facilities for learning what is being transacted behind the scenes, and its columns are open to every shade of opinion."

—THE OXFORD MAGAZINE

"The Journal of Education.' This has made its way to the top rank of educational journals. Nowhere can we find a more carefully recorded chronicle of events, better considered judgments on questions of the day, or more competent criticism of educational literature."

—THE SPECTATOR

"The first in this country to devote itself to the work of Education as a whole, without regard to any particular sect or society. It numbers among its contributors a more brilliant group of scholars, perhaps, than any similar periodical."

—THE PALL MALL GAZETTE

"A publication which has long since established itself as one of the most readable and useful journals for teachers."

—THE BIRMINGHAM DAILY POST

CITY OF BIRMINGHAM EDUCATION COMMITTEE.

APPOINTMENT OF TWO INSPECTORS OF ELEMENTARY SCHOOLS.

Applications are invited for the post of INSPECTOR OF ELEMENTARY SCHOOLS. Two vacancies exist. Candidates must have had teaching experience.

The commencing salary will be fixed according to qualifications and experience, and will not exceed £800 per annum, and, subject to satisfactory service, will be increased by £50 per annum to a maximum of £1,000 per annum in the case of a man and £800 per annum in the case of a woman. These salaries will not be affected by nor participate in any war bonus hitherto granted by the City Council.

The successful candidates will be on the staff of the Chief Education Officer, and will be subject to the provisions of the Council Superannuation Scheme. Full particulars regarding the posts and forms of application may be obtained from the undersigned, and must be returned not later than Tuesday, October 5th, 1920.

Canvassing (direct or indirect) will be a disqualification. P. D. INNES,
Education Officer, Chief Education Officer,
Council House, Margaret Street,
Birmingham.

—Required: LECTURER IN EDUCATION, important College (January); ASSISTANTS, Students (good Schools). Disengaged: Lady Matron, Assistants, French Mistresses, House Mistress. Finishing Course recommended.

Posts Vacant—continued.

TRANSVAAL SECONDARY SCHOOLS AND TRAINING COLLEGES.

TEACHERS, both men and women, are required for the Secondary Schools of Transvaal Province, South Africa, in which English is the medium of instruction, and for the Normal or Training Colleges.

The ordinary Secondary School prepares pupils for the Matriculation Examination of the three Universities of South Africa. Teachers able to take any of the usual Matriculation subjects may be appointed. There are also vacancies for teachers of Vocational subjects connected with commerce, trades, or crafts, and Domestic Science.

Teachers are also required for general or special work in Training Colleges.

Suitable candidates will be interviewed. Free passages will be provided for those elected.

It is desirable that candidates appointed should be able to sail in time to take up duty at the beginning of the first term (towards the end of January) of 1921.

Applications may be sent at any time up to the 30th November, 1920, to the SECRETARY, Office of the High Commissioner for the Union of South Africa, 32 Victoria Street, London, S.W.1, from whom forms of application and further particulars may be obtained.

All applications will be dealt with as soon as possible after they are received.

Truman & Knightley

SCHOLASTIC AGENTS LTD

TO ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

Messrs. Truman and Knightley have already received instructions regarding a large number of vacancies for January in Public and Private Schools at home and abroad, and will be glad to hear from candidates free for appointments then.

There is no charge for registration. The requirements of each applicant receive careful consideration and attention, and the commission charged to those for whom an appointment is secured is very moderate.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University. The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. **2s. 6d.** net each.

New Volume just added.

OTHELLO. Edited by C. H. HERFORD, M.A., Litt.D.

. THE STANDARD ENGLISH CLASSICS SERIES.

A well printed and durably bound edition of the classics. Each volume includes notes and introductory material designed to help the student to form a critical estimate of the classic as a work of art, and to appreciate the reason for the place which has been assigned in literature to the book and its writer.

The following volumes are included in the Series. A complete list will be forwarded on application.

ADDISON AND STEELE: SIR ROGER DE COVERLEY PAPERS. 2s. 9d. net.

ARNOLD: SOHRAB AND RUSTUM and other Poems, including **THYRSIS.** 2s. 9d. net.

BURKE: SPEECH ON AMERICAN TAXATION. 2s. 9d. net.

BURKE: SPEECH ON CONCILIATION WITH AMERICA. 2s. 9d. net.

DICKENS: A TALE OF TWO CITIES. 4s. 6d. net.

ELIOT: THE MILL ON THE FLOSS. 4s. 6d. net.

GOLDSMITH: THE DESERTED VILLAGE, THE TRAVELLER; and GRAY: ELEGY IN A COUNTRY CHURCHYARD. 2s. 6d. net.

LAMB: ESSAYS OF ELIA. First Series. 3s. 6d. net.

MACAULAY: LIFE OF SAMUEL JOHNSON. With a Selection from his **Essay on Johnson.** 2s. 6d. net.

MACAULAY: ESSAY ON MILTON. 2s. 6d. net.

MILTON: L'ALLEGRO, IL PENSEROSO, COMUS, and LYCIDAS. 2s. 9d. net.

MILTON: PARADISE LOST, Books I and II., and **LYCIDAS.** 3s. net.

POPE: RAPE OF THE LOCK and other Poems, including **ESSAY ON MAN.** 3s. net.

SCOTT: QUENTIN DURWARD. 3s. 9d. net.

SCOTT: LADY OF THE LAKE. 3s. 3d. net.

MODERN LANGUAGES.

FRENCH.

BRUCE: EXERCISES IN FRENCH COMPOSITION, based on Alphonse Daudet's **La Dernière Classe** and **Le Siège de Berlin.** The text of both stories is given, together with a few details (in French) of the Franco-German War. 3s. 3d. net.

CORNEILLE: LE CID. With Introduction, Notes, and Vocabulary. 3s. 6d. net.

LABICHE AND MARTIN: LE VOYAGE DE M. PERRICHON. With Introduction, Notes, Exercises for Composition, Questions, and Vocabulary. 2s. 9d. net.

LA FONTAINE: ONE HUNDRED FABLES. With Notes and Vocabulary. 3s. 6d. net.

MADAME DE SÉVIGNE: SIXTY LETTERS. Annotated. 4s. 6d. net.

MOLIÈRE: LES PRÉCIEUSES RIDICULES. With Introduction, Notes, and Vocabulary. 3s. 9d. net.

GERMAN.

FREYTAG: DIE JOURNALISTEN. With biographical Introduction, Notes, Exercises, and Vocabulary. 3s. 9d. net.

GOETHE: EGMONT. With Introduction and Notes. 4s. 6d. net.

GOETHE: IPHIGENIE AUF TAURIS. With Introduction, Notes, Repetitional Exercises, and Vocabulary. 5s. 6d. net.

HAUFF: LICHTENSTEIN. With Introduction, Notes, Exercises, and Vocabulary. 6s. net.

HEINE: DIE HARZREISE. With Introduction, Notes, and Vocabulary. 3s. 9d. net.

KLEIST: PRINZ FRIEDRICH VON HOMBURG. With Introduction, Notes, and Bibliography. 3s. 9d. net.

LESSING: MINNA VON BARNHELM. With Introduction, Notes, and Vocabulary. 3s. 9d. net.

HISTORY.

A SHORT ANCIENT HISTORY. By J. H. BREASTED. 334 pages. Illustrated. 6s. 6d. net.

ANCIENT TIMES: A HISTORY OF THE EARLY WORLD. By J. H. BREASTED. 742 pp. Illus. 10s. 6d. net.

MEDIEVAL AND MODERN TIMES. By J. H. ROBINSON. 777 pages. Illustrated. 10s. 6d. net.

AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE. By J. H. ROBINSON.

In One Volume. 714 pages. 11s. 6d. net. In Two Volumes:—**Vol. I** (From the time of the Barbarian Invasion to the close of the Fifteenth Century). 9s. 6d. net. **Vol. II** (From the opening of the Sixteenth Century to the opening of the Twentieth Century). 9s. 6d. net.

READINGS IN EUROPEAN HISTORY (to accompany the **Introduction to the History of Western Europe**). In Two Volumes, each 13s. 6d. net. **Abridged Edition in One Volume, 13s. 6d. net.**

THE DEVELOPMENT OF MODERN EUROPE. By J. H. ROBINSON and C. A. BEARD.

In Two Volumes:—**Vol. I** (The Eighteenth Century: The French Revolution and the Napoleonic Period). 362 pages. 10s. 6d. net. **Vol. II** (Europe since the Congress of Vienna). 448 pages, and an eighty-page supplement which brings the narrative down to August, 1918. 11s. 6d. net.

READINGS IN MODERN EUROPEAN HISTORY (to accompany **The Development of Modern Europe**). Two Volumes, each volume 13s. 6d. net.

A complete catalogue, or sectional catalogues—English, History, Modern Languages, Mathematics, Natural Science—will be forwarded post free on application.

GINN & CO., 7 Queen Square, Southampton Row, London, W.C.1.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

**This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.**

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness.

The following extracts are from two such acknowledgments:—

"When I first came here I spent over £50 in six months, advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"Two years ago you sent me a pupil named ———. Through her parents I have had **four** good pupils this year from four different places, and through two of these I have **five** more coming this term: that is, ten pupils from paying **one** commission."

**If you have not yet made trial of our services, we shall be glad
to hear from you, with particulars of your School.**

N. L. FRAZER, M.A.,
Head Master of Ilkley Grammar School.

A HISTORY OF ENGLAND FOR SCHOOLS.

With Documents, Problems, and Exercises.
Price **7s. 6d.**; or in Two Parts, **4s.** each.
Part I.—55 B.C. to A.D. 1603. Part II.—A.D. 1603 to Present Day.
The "Documents, Problems, and Exercises" are also published separately, in six sections, price **1s. 4d.** each.

AN INTRODUCTION TO WORLD HISTORY.

Containing 21 Maps and 23 Illustrations. Price **3s. 6d.**

By **JOHN FINNEMORE.**

SOCIAL LIFE IN ENGLAND.

Price **3s. 6d.** each.

Vol. I.—Saxon Times to 1603. Vol. II.—1603 to the Present Day.
The aim of this Reader is to give a picture of the life of the people at different periods. It describes how they worked and how they played; how the great man dealt with the small, and how the small man made a living; what the people ate and wore, and how much they paid for food and clothes; what they got for their labour, and what they did with it. It is suitable for the upper classes of primary schools and the lower and middle forms of secondary schools.

By **H. L. BURROWS, M.A.**

STORY OF ENGLISH HISTORY & TRADE.

With 36 Illustrations. Price **3s. 6d.**

This book is intended for use as a reader and textbook for the upper classes of primary schools and the lower and middle forms of secondary schools.

By **W. H. BARKER and W. REES.**

THE MAKING OF EUROPE.

A GEOGRAPHIC TREATMENT OF THE HISTORICAL DEVELOPMENT OF EUROPE.

Illustrated with about 40 Sketch Maps. Price **5s.**

This volume gives in a new form the essential features of European History, and is designed to meet the requirements of Continuation Classes and the higher forms of Secondary Schools.

By **H. E. MARSHALL**, Author of "Our Island Story."

A SHORT SKETCH OF EUROPEAN HISTORY VOL. I.—FROM THE FALL OF THE ROMAN EMPIRE TO THE REFORMATION.

Illustrated with maps. Price **5s.**

This book is not intended to be a compendium of European History, but rather an introductory study recording in as dramatic a form as possible the events and influences which have had most effect on the general development of Europe.

Edited by **H. CLIVE BARNARD, M.A., B.Litt.**

With contributions by leading writers in each of the self-governing Colonies, in India, and America.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

A SHORT HISTORY OF THE BRITISH EMPIRE
AND THE UNITED STATES.

With 22 maps, specially prepared. Price **7s. 6d.** net.

The book is designed primarily for the Upper Forms of Secondary Schools, especially in connexion with advanced courses in "modern studies," and for candidates for history scholarships. At the same time it should prove useful in Evening and Continuation Schools, in Training Colleges, and for private students.

CORRESPONDENCE.

HOLIDAY REARRANGEMENTS.

To the Editors of *The Journal of Education and School World.*

DEAR SIRs,—May I direct the attention of your readers to a suggestion concerning the rearrangement of school terms and holidays which would, if adopted by schools other than elementary, bring many advantages in its train? A half-yearly division is an arrangement not unknown to history, and it would be a gain in these days to restore the custom. It is suggested that the year should be evenly divided into two terms of four months each and two holidays of two months each, the holiday months being December and January, June and July.

The advantages of such arrangement may be readily seen. Children would have freedom to use the two best months in the year for outdoor life, and would avoid the early morning outgoing during the two worst months.

Boys and girls home from boarding school would have time for natural home life. Parents would be less inclined to spoil them than is the case during the shorter holidays, and would have better opportunity for the encouragement of hobbies, the study of character, and so on.

Railway expenses for those going to boarding schools would be minimized.

Uncertainties as to dates of school holidays, and consequent difficulties of making plans, would no longer exist.

Both teachers and children would have better opportunities for quiet, steady work; the exhausting hustle of end-of-term examinations, reports, breaking up, and the loss of time involved in beginning a new term would be reduced.

The two-month holidays would be most advantageous for those anxious to travel or to make any special studies, and those who are teaching would be better able to store up fresh material for their work.

As with any change, various objections are possible. It may be urged that school terms are already long enough and another month would be most undesirable. But surely if four months' steady work is too great a strain, the system itself is at fault. It is true that we hear much from teachers of being worn out at the end of a twelve-week term, but this is partly due to the hustle of end-of-term work, to working against time, and would not necessarily be increased by the additional month of ordinary work. It may in some cases be due to the feeling that an end-of-term tiredness is natural and is expected by friends and relatives. Such individuals as feel unable to survive sixteen weeks' work might perhaps undergo a course of treatment by "suggestion" to the effect that there are many brain workers who are doing good work with only a fortnight's holiday in the whole year.

Then a considerable number of people would find fault with the suggestion of working through August. Possibly, however, they might be convinced by experience of the fallacy of the idea that August is any less comfortable than July for purposes of work.

The greatest drawback to the change would be the present times of public examinations. Could anyone prevail upon the august beings who are responsible for these to change the times to the end of May and the end of November? What schools will make the experiment and lead the younger generation into habits of steadier and less spasmodic work?—Yours truly,

MARGUERITE BAVERSTOCK.

Eversley School, Southport.

THE CAERLEON CONFERENCE.

To the Editors of *The Journal of Education and School World.*

SIRs,—The locality chosen for this Conference—the site of one of the first Roman settlements in Britain, and one closely connected with the Arthurian legends—and the title "Auto-Education," which had interest but no meaning for us, attracted us; therefore, two people, ignorant of but prejudiced against "Montessori," unexpectedly found themselves for a week in the company of a set of seventy enthusiastic yet rational admirers of this latest educational pioneer. We who had scoffed were led to pray that the beneficent principles that we heard expounded might soon be put in practice in every school in the country. Though we attended all the lectures and listened to the long and exciting discussions among the experts, we do not yet feel competent to explain the doctrines, but we grasped that Montessori does not, as we had erroneously supposed, stand for licence, but for ordered liberty.

The very able exponents of the system, enthusiasts daily practising it, convinced us that it is in the main a revolt against our time-chopping lessons, our long uninterrupted lectures to classes, with the attitude of dull receptivity encouraged in the ordinary school

pupil—that it is, in short, a fresh attempt to fit a system of education to a child instead of a child to a system.

The difficulties in the way of an even partial adoption at present seem insuperable: the closely-packed, uniform-sized classrooms, with their unyielding furniture, the equally unyielding time-tables pieced round the specialist teacher, and, worst of all, perhaps, the insistence that every pupil, whether fitted by Nature or prepared by art, shall learn every subject prescribed for the form by the Board of Education.

Although we have retired from the profession, as we have all our days pleaded and struggled for greater elasticity in State-aided schools, we think it only just to put on record our change of feelings with regard to this new movement, which, if successful, must mean more difficulties for teacher, organizer, and inspector.—We are, yours faithfully,
Wotton-under-Edge.

EDITH CADMORE,
M. S. WALKER.

"AN ELEMENTARY SPANISH GRAMMAR."

To the Editors of the *Journal of Education and School World*.

SIRS,—In a review of the above book, which appeared in your August issue, your reviewer complains that "even the accentuation is not modernized." As his remarks are somewhat misleading, will you kindly allow me to state the facts?

The preposition *a* (to), and the conjunction *o* (or) are now permitted by the Spanish Academy to be written without an accent. This fact is stated on page 9 of the Grammar. As most Spanish printed texts retain the *a* and *o* forms, and as most educated Spaniards have not yet adopted the Academy's suggestion, I thought that a foot-note would meet the case.

The point is one of such small moment that I should have passed it by without comment were it not that it might be thought, from your reviewer's remarks, that a serious blunder had been made.

The University, Sheffield.

J. N. BIRCH.

September 14.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

The movement in England towards a reunion of the Christian Churches may perhaps bring with it some agreement as to religious education, in which many Americans and others see a necessary corrective

Of Religious Education.

for moral and political aberrations. At present the position in the United States is unsatisfactory. It is stated (*Religious Education*, xv, 4) that millions of American children are not yet reached by any religious educational influence; that the amount of time given to the religious training of those who are reached is insufficient; and that religious teaching is done, in great part, by immature, untrained, and unsupervised instructors. To remedy these evils it is proposed to make a vigorous effort throughout the land. Churches and religious organizations, hitherto rivals, are combining to support this effort. There has been "a marked quickening of the spirit of co-operation and a strengthening of the bonds of fellowship in Christian service." In England, education has suffered much from "religious difficulties"—that is to say, from sectarian controversies—suffered so much that "religion" has become for schoolmen a sleeping dog that it were unwise to wake. Yet the spirit of concord that is abroad might well spread a wing over the child and the school. It is for the Churches to consider how far the formulæ about which they differ may be subordinated to the principles on which they agree. We for our part do but urge that religious instruction, to do its full service, must have more brightness and vitality. "Religion," says an authority, "is not a 'subject' to be superadded to a curriculum. It must be present at every stage of education, and associated, above all, with the joy of living." Dour creeds do not suit the young.

We are writing in September, and in September is being celebrated, with a pageant and other ceremonies, the departure of the Pilgrim Fathers from Plymouth three hundred years ago. William

A Quickening Memory.

Bradford, who sailed as one of the company on the "Mayflower," prayed that their children might boast: "Our fathers were Englishmen which came over this great ocean, and were ready to perish in the wilderness." The early settlers brought with them from England a zeal for education as great as, and connected with, that love of religious freedom for which the first risked life. "They left the Motherland," writes Dr. Snedden, "at a time when 'grammar schools' were being rapidly multiplied, so that increasing numbers of youth received the advantage of the training

which led to the university. Under the impulse of this movement for higher education, and feeling the necessity of educating ministers in order that the religious welfare of the colonies might be guarded, our fathers at once proceeded to establish similar schools." Since those far-off days, by a sort of back-flow, many a wholesome impulse for education has come to us from America. We take the opportunity of acknowledging the return and expressing the hope that co-operation in this field may strengthen continually the ties that bind the English to the American nation.

ITALY.

Of Italy, as of some other countries, strikes are at the moment the chief product. Italian journals are being printed on paper which it would have pained the scholars of the Renaissance to handle. Yet

amid economic difficulties education is not neglected. Among recent articles in the pedagogic journals we signalize one under the rubric "*Scuola differenziale*," signed by Silvestra Tea, in the *Educazione Nazionale*—a fascinating account of the treatment of wretched, half-famished children from squalid homes. Their teacher, the writer, held that to withhold art from the life of a people was a sin against God. But artistic beauty was to be reached through natural beauty. The children were encouraged to gather beautiful objects—grasses, insects, stones. Curiosity about these bred the need of the book. Then, if the names were to be preserved, came the need of writing. Again, since the common treasures of the class were to be divided, each child receiving a fair part, there arose the need of calculation. In general, the teacher, discarding traditional didactic processes, was guided by a penetrating spirit of humanity. We regret that, in the space at our disposal, we cannot give a complete summary of the article.

SPAIN.

Bulletin V of the World Association for Adult Education deals

Adult Education.

chiefly with Adult Education in Spain. In the new Budget a sum of 1,000,000 pesetas has been appropriated for scholarships which will enable children of the working class to attain higher education. For illiterate adults, elementary-school teachers conduct *clases de adultos*, attended by about 13,000 pupils, but having little cultural value. Adult education—as we understand it, an education which has as its objects personal culture and training for citizenship (*educación superior libre de los adultos*)—initiated by D. Fernando de Castro, Rector of Madrid, at the time of the Spanish Revolution (1869), has made some, but not rapid, progress. It is provided mainly by the following bodies:—University Extension Societies, People's Universities, Working-class Organizations, and Athenæums (*Ateneos*). To University Extension the most effective impulse given so far has been that of the University of Oviedo; but its work, after twenty-one years of duration, is endangered by circumstances of a social order. Of the other agencies the most conspicuous are the *Ateneo de Madrid*, from which sprang, in 1904, the now declining *Universidad popular* of Madrid, the *Asociación de Estudiantes de Filosofía* (Association of Students of Philosophy) of Madrid, and the *Grupo de Estudiantes Socialistas* (Group of Socialist Students), formed in 1917, an active association with a wide scheme. The *Patronato de las Escuelas de Adultas* concerns itself exclusively with the education of women, and the feminist movement at Barcelona expresses itself in the *Union de Mujeres de España* (Union of Spanish Women), which, among its other activities, has organized English courses in the local *Ateneo*.

INDIA.

It was necessary to relieve the congestion of the University of Calcutta, and Dacca, with its 120,000 inhabitants the second city in Bengal, was an apt site for a new academy. The University of Dacca

The University of Dacca.

will be opened, as it is hoped, in 1921. It has been constituted in its main lines to accord with the recommendations of a committee presided over by Mr. (now Sir Robert) Nathan, which sat in 1912, and of the Calcutta University Commission, 1917–19, presided over by Sir Michael Sadler. In it is expressed the desire of the Government of India to create a type of residential and teaching university in contrast with existing universities constituted of affiliated colleges. Although it will provide special facilities for Mohammedan students, it will be open to all fit comers, without distinction of sex, race, creed, or class. The applications that have been made for seven professorships and five readerships are now being considered, the final appointments resting with the Governor of Bengal. Of a professor the initial salary will be from Rs. 9,000 to

Rs. 12,000 a year, rising by annual increments of Rs. 600 to Rs. 21,600; of a reader, Rs. 7,200 a year, rising by sums of Rs. 600 to Rs. 14,400; but the Reader in Phonetics begins with Rs. 12,000 and rises to Rs. 18,000. The prospects of the budding academy at Dacca seem to be bright. Let us quote from the Report of the Calcutta University Commission:—"Certainly in no other place in Bengal outside the metropolis are there greater opportunities for establishing a university which may serve as an example; and in some ways Dacca has even greater opportunities than those of Calcutta itself. The group of noble buildings, libraries, and laboratories, the green playing-fields with great spaces around them, uncramped by the crowded areas of a metropolis, will give to the young students of Bengal enviable opportunities to know the happy yet strenuous life enjoyed by so many university students in the island universities of the West. Dacca will be a small university compared to Calcutta, but it is to be remembered that many of the greatest of university teachers have lived and worked in universities beside which Dacca will be large; and in many ways the opportunities of Dacca will be unique. We hope that it will serve as a new home for the study of that Arabic philosophy and science which gave fresh intellectual life to Europe during the Middle Ages; that Sanskrit studies will find a worthy and equal place alongside Islamic studies; and that in this quiet intellectual centre in the great plains and waters of Eastern Bengal, and in touch with the historic city, there may spring up a fresh synthesis of Eastern and Western studies. These are the possibilities of Dacca. It will lie with the men who control the university to turn those possibilities into realities."

In Bombay during the year 1918-19, in spite of unfavourable conditions, the total number of institutions, public and private, rose, as the Report shows, from 13,543 to 14,193, and the number of pupils from 781,674 to 834,003. We refrain from further statistics of educational progress in the Presidency to find a place for Scouts, the sounds of the great Jamboree still ringing in our ears. Scouting has struck good root, and is growing fast in India. The Viceroy has accepted the position of Chief Scout, and will make headquarters' appointments. Whilst the organization remains private and non-official, the Government will offer it such encouragement as it can fitly give. To each head of a Province will be offered the post of Chief Scout in his own district. Finally, to troops of Indian Boy Scouts will be granted warrants by the Baden-Powell Association, subject, of course, to the acceptance of the Scout Promise and Scout Law, which bind all Baden-Powell Boy Scouts throughout the Empire into one great brotherhood. Scouting promises to be an Imperial cement as well as an individual tonic for the young.

REVIEWS AND MINOR NOTICES.

FROM NEBULA TO THE LEAGUE OF NATIONS.

The Outline of History. Being a Plain History of Life and Mankind. By H. G. WELLS. Revised and Corrected Edition. (21s. net. Cassell.)

Probably most people who are interested in either history or Mr. H. G. Wells have read the major part of this remarkable work, as it has appeared in fortnightly sections during the course of the past year. Few of those who have followed its gradual unfolding can have failed to be impressed by the vastness of its compass, the proportion of its parts, the orderliness of its arrangement, the originality of its views, and, above all, by the picture of evolutionary continuity which it presents. Those impressions will be deepened by a survey of the book in its new and complete form, and particularly by a perusal of the concluding sections that have not yet become available in serial form.

Mr. Wells has written his "Outline of History" with a purpose—the purpose of a social, political, and religious reformer. The work sums up and co-ordinates the messages which he has given to the world in such monographs as "A Modern Utopia," "What is Coming," and "God the Invisible King." It is a fact of first-rate significance that Mr. Wells—in striking contrast to many zealous revolutionaries—realizes that it is hopeless to attempt to substitute new worlds for old without an intimate knowledge of the way in which the old came into existence. Hence he has made this laborious, and in the main brilliantly successful, effort to envisage the progress of

humanity as a whole in the past, in order that he may see for himself, and may depict for others, the pathway of the future. It is naturally towards the end of the work that Mr. Wells's general idea makes itself most evident, and it is accordingly round the sections that relate to recent events and to "the next stage in history" that controversy is most likely to arise.

Those whose sympathies are cosmopolitan, pacific, democratic, republican, rationalistic, will warmly approve Mr. Wells's interpretations, judgments, and forecasts. Those who are not moved by the same ideals will, with increasing frequency, dissent and demur; for in Mr. Wells's hands even a chronological table becomes tendentious. Mr. Wells hopes that the world may see—and feels justified in believing that it will in the due course of evolution see—a universal state marked by (1) a common religion, (2) high and general education, (3) peace, industry, and equality, (4) scientific research, (5) free thought and discussion, (6) democratic organization, (7) collectivism, (8) improved legislative and administrative machinery.

The story of mankind, which Mr. Wells tells in large and arresting outline, is made to show a gradual movement along lines converging towards this ideal world-polity. The narrative is divided into nine "books." The first treats of the making of our world in the incalculably remote eras of geological time; the second discusses anthropologically the making of man; the third deals with the dawn of human history and the development of the early civilizations of the East. It is no disparagement of the later "books" to say that these three are the best. Mr. Wells is essentially a man of science; he is at home in the subjects with which he is here concerned; he writes about them with the assured confidence of the expert.

Book IV is devoted to Judah, Greece, and India, and it is here that we meet with the first of Mr. Wells's prejudices. He dislikes and despises the great empire-builders. Alexander the Great in this section, together with Julius Caesar, Charlemagne, and Napoleon in later sections, comes in for quite curious depreciation. Napoleon is even said to have been less "supple and intelligent" than his nephew of the Third Empire! It is evident that emperors have been obstacles to the evolution of the democratic-republican world-state.

Book V is concerned with the Roman Empire, and once again Mr. Wells manifests his complete emancipation from tradition. He, nevertheless, gravely underestimates both the greatness and the importance of the civilizing work that Rome did in the world. Sounder views respecting Rome—and also respecting Napoleon—will be found in Oscar Browning's "General History of the World," which Mr. Wells commends in his Introduction.

Book VI deals with Christianity and Islam. These are difficult themes to discuss in an outline of world history. Mr. Wells achieves a triumph. His treatment of both is marked by reverence, freedom, freshness, insight, and a sympathetic effort after strict historical justice. Mr. Wells looks to each of them to contribute important factors to the coming world-religion.

Book VII proceeds to discuss the Mongol conquests and the geographical discoveries which marked the transition from medieval to modern times.

Book VIII, under the title "The Age of the Great Powers," brings the story down to the present day.

Book IX is prophetic.

Enough has been said to indicate the range of this masterly and masterful work. None but Mr. Wells could have written it; for though he has had (as he amply acknowledges) the aid of numerous experts, in essence it is all his own. His is the point of view; his the unifying idea; above all, his the literary charm. Mr. Wells is a supreme craftsman in the art of being interesting. Wherever the reader dips into this mine of information and suggestion his attention is arrested and he inevitably reads on. It is safe to say that thousands will gain their first introduction to world-history from these illuminating and fascinating pages. No doubt many of Mr. Wells's original, not to say eccentric, judgments of both

men and movements will have to be modified. But, all the same, he has rendered a great service to the cause of humane education by writing this wonderful "Outline of History."

COLERIDGE, LAMB, AND LEIGH HUNT.

'The Christ's Hospital Anthology.'—*The Poetry and Prose of Coleridge, Lamb, and Leigh Hunt*. Selected and Edited by S. E. WINBOLT. (12s. 6d. net. W. J. Bryce.)

"O fortunatos nimium sua si bona norint!" one is tempted to say of Christ's Hospital boys, remembering that Coleridge, Lamb, and Leigh Hunt were all trained at their famous foundation and have all left some record of their connexion with the school in imperishable pages of English literature. But so little is the average Englishman accustomed to reverence great men of letters, or to find in them any source of national or personal pride, that one cannot be surprised to learn that Christ's Hospital boys, who generally leave school at seventeen, know hardly anything of the lives and writings of their three great schoolfellows. Mr. Winbolt, who as boy and master has been connected with the school for more than forty years, has made it his primary aim to remedy this deficiency; but as the famous trio are a possession for all Englishmen, the interest of the volume goes far beyond a single school, and, with its attractive portraits and other illustrations, it may be recommended as a delightful book for school libraries and school prizes.

Mr. Winbolt's plan has been to tell the story of the three men of letters briefly in a synchronous narrative, which passes continually from one to another and connects them with each other and with the chief events of the time in politics and literature. For a work intended to commemorate the three equally, this was probably the right method, though it involves some loss of continuity of interest. But most boys study the history of the Napoleonic period in some detail at school, and to connect the three lives with concurrent events should be a distinct advantage. The narrative is followed by a copious anthology, which again observes a chronological order instead of keeping the three authors apart. Here, again, there is an inevitable loss; but it is interesting to read side by side what Coleridge and Lamb wrote in 1798, or Coleridge, Lamb, and Hunt in 1818. Letters and autobiographical passages are given as well as poems and essays, and, under Mr. Winbolt's guidance, we gain, bit by bit, a clear impression of three remarkable personalities. The place of Lamb and Coleridge in English literature is secure, and a great place it is. Leigh Hunt is chiefly remembered to-day as the friend and adviser of Keats, or possibly as the original of Dickens's Harold Skimpole. As a prose essayist and as an interpreter of poetry, if not as a poet, he earned the right to be remembered on his own account; and the most valuable service this book can render is to recall attention to him. It is easy, of course, to criticize an anthology, however judiciously it has been made. No lover of "Elia," as Mr. E. V. Lucas once showed in a delightful essay, could be quite satisfied with another man's selection—or even with his own, and an admirer of Hunt may be permitted to suggest that "Jaffar" would have been a better poem than "Mahmoud," and to desiderate something more from "Imagination and Fancy."

BIOGRAPHY.

- (1) *Dorothea Beale*. By E. H. SHILLITO. (2) *Elsie Inglis*. By E. S. McLAREN. (3) *Florence Nightingale*. By E. F. HALL. (3s. 6d. net. "Pioneers of Progress: Women." S.P.C.K.) Harrap.) (8) *Servants of the People*. By Dr. R. WILSON. (2s. net. Dent.) (9) *Boyhood Stories of Famous Men*. By K. D. CATHER. (5s. net. Harrap.)

In the early days of Queen Victoria's reign, we note in Miss Shillito's "Dorothea Beale," "history was learned by com-

mitting to memory little manuals." Since then, happily, it has become a commonplace to found our early history teaching upon the life stories of outstanding men, and all teachers now appeal more and more to the human interest, even in such subjects as science and mathematics. Very welcome are the lives of three modern pioneer women. So long has it been customary to impress upon girls that their work and interests must be strictly devoted to home and family, that many women still lack any sense of belonging to a community, or of a duty to that community, any feeling that talents needed in the outside world should not be limited to kitchen and nursery. These biographies may well be used as texts by the teacher struggling with that new subject, "civics," and from them girls of the present day, whether studying for special vocations or destined to lead leisurely home lives, will learn something of the needs of a wider world and of the duties of citizenship. For civics teaching to young children, "Servants of the People" is specially designed, the author rightly holding that it is "a subject which cannot be made really interesting unless it is based upon personal history, literature, and the interests of daily life." "Boyhood Stories of Famous Men," among which is included a tale of one famous woman, are fresh and unaffected sketches, certain to fascinate the child, who will through them gain an introduction to some of the great artists and an idea of the continuity of art and the building up of its traditions—a side of education almost neglected in the school. In the reading of life stories such as the above, children's tastes, which should in the main determine their careers, are often unexpectedly revealed to themselves and to their teachers, and valuable ethical lessons incidentally acquired.

CLASSICS.

Res Metrica. An Introduction to the Study of Greek and Roman Versification. By Prof. W. R. HARDIE. (7s. 6d. net. Clarendon Press.)

Readers of the late Prof. Hardie's essay on "The Metrical Form of Poetry" in his "Lectures on Classical Subjects" have had a foretaste of what they will find in this book, which will not disappoint the appetite whetted by that essay. It is, indeed, the first complete manual of Greek and Roman versification to be published in English, and will remove a great handicap from the classical student with little or no German. Prof. Hardie had considered the translating of some prominent German work on the subject, but he found none of them satisfactory, and so produced the present volume himself, which grew out of an essay (the last chapter of the book) on the lyric metres of Horace. He begins by discussing the Heroic hexameter, and brings out very clearly the divergencies of later writers from the Homeric canon, and then deals in order with all the simpler and more familiar forms of verse. To the classical schoolmaster the book will prove an inestimable boon, not only for metrical information, but also for such things as the suggested course of reading in Horace contained in the last chapter, where a selection is made on a threefold basis of metrical, poetic, and historic interest. Not the least valuable part of the book is the excellent appendix, which contains *inter alia* a glossary of the meaning of metrical terms—not a mere list, but a series of short paragraphs giving a lucid discussion of the meanings of things like *arsis* and *thesis*, *bucolic diæresis*, and other technicalities likely to puzzle the young student.

Discovery in Greek Lands. By F. H. MARSHALL.

(8s. 6d. net. Cambridge University Press.)

If the recommendation of Horace counts for anything, this book is assured success, for Mr. Marshall *miscuit utile dulci* with rare skill. It is intended to give the general reader some idea of the additions made by the excavations and discoveries of the past fifty years to our knowledge of ancient Greece, and, incidentally, provides a very convenient sketch even for the specialist. Four periods (Earlier and Later Prehistoric and Earlier and Later Historic) are distinguished; and other chapters deal with Temple Sites, Great Centres of Greek Life, and Some Isolated Discoveries; while a Select Bibliography and a list of important excavations conclude a volume ably written and charmingly produced with a wealth of beautiful illustrations.

EDUCATION.

Psychology applied to Music Teaching. Curwen Edition, 5820.

By Mrs. J. S. CURWEN. (15s. net. Curwen.)

We have been promised a series of sectional psychologies dealing with the various subjects of the curriculum. While the other subjects dally, music leads the way: for this is the second attempt to apply the principles of psychology to the needs of the music teacher. The natural criticism of Mrs. Curwen's book is that it contains more psychology than music. But this is inevitable, and, after all, the teacher who takes up this book is assumed to know music; his need is, first, a knowledge of psychology in general, and next, some help in the practical application of that knowledge to

(Continued on page 696.)

Cambridge Essays on Adult Education. Edited by R. ST JOHN PARRY, Vice-Master of Trinity College, Cambridge. Demy 8vo. 12s 6d net

The object of this volume of essays, which is dedicated to the Master of Balliol, is to bring before the public some of the principal subjects which are dealt with in the very important report of the Committee on Adult Education (Cd. 321, 1919). The editor contributes an introduction, and the writers of the essays are Rev. D. H. S. Cranage, A. E. Dobbs, Albert Mansbridge, Rev. J. H. B. Masterman, Arthur Greenwood, Mrs. Huws Davies, Miss Alice Thompson, W. G. Constable, and Alfred Cobham

Cambridge Geographical Readers V, The British Empire. General editor, G. F. BOSWORTH, F.R.G.S. Crown 8vo. With 82 illustrations. 4s 6d

This book was mainly written before 1915, but the war caused its publication to be postponed. Since the signing of peace, opportunity has been taken to complete the book and bring it up to date. The last two chapters describe the efforts made by the Dominions and Possessions of Britain to win the war, and give some account of the new lands which have been brought under British control.

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

his special subject. Mrs. Curwen is eminently successful both in her general exposition and in her detailed application to music. On a Herbartian basis, she builds up a structure that includes all that is best and most practical in the newer developments of psychology. Her exposition is admirably clear, her illustrations particularly helpful, and the general effect stimulating in the extreme. On the practical side, the book bears traces everywhere of the successful teacher. Mrs. Curwen knows all the pitfalls, and takes care that her readers shall know them too. She is as much opposed to over-methodizing as to under-methodizing, so that even the ultra-practical person cannot but be favourably impressed. An unfortunate omission in the plate opposite page 31 will no doubt be filled in at the next printing. Two striking appendixes increase the value of a book that no progressive teacher of music can afford to do without.

ENGLISH.

Commercial Letter Writing. By W. M. BUSS.
(2s. 6d. Longmans.)

There is no heresy that the teacher of English should combat more strenuously than the notion that a special kind of English is needed for commercial correspondence. Clearness, brevity, courtesy—these are the three indispensable qualities of the good business letter; and a special course of "vocational training" ought to be superfluous in order to insist on these aims, and will certainly be harmful if it lays disproportionate stress on any others. Though Mr. Buss's advice is sound, a boy who has been properly taught in a secondary school should not need it.

Literary Essays. Selected and Edited by H. G. RAWLINSON.
(3s. 6d. Macmillan.)

A welcome addition to the stock of essays available for use in schools as materials and models. We have here some of the finest writing of the greatest among the later Victorians—Arnold's essay on Wordsworth, Myers's on Marcus Aurelius, Pater's on Leonardo da Vinci, Green's on the "Florence" of Dante, Froude's on Oxford, with three essays by R. L. Stevenson. The essays are too difficult for any class below the sixth, but for a good sixth form, whether of boys or girls, nothing could be more stimulating.

Passages for English Repetition. Selected by Masters at Uppingham School. (4s. net. Milford.)

Uppingham has made its own anthology—on the whole, a good one. O'Shaughnessy's "We are the Music-makers" is put first, and strikes a noble key-note. Shakespeare (the speeches as well as the songs), Milton, and a long line of poets, are drawn upon, down to Uppingham's own Flecker and Hornung. There is little here that is not first-rate, though Flecker is not at his best in the additional stanzas for the National Anthem, which are clever but not inspired, and Kipling is not well represented by "Big Steamers," in which the politician is more in evidence than the poet.

GEOGRAPHY.

A Concise Historical Atlas for Schools. Compiled and Drawn by B. V. DARBISHIRE. (2s. Bell.)

Mr. Darbishire's methods of cartography are well known; they aim at evading the necessity and expense of using colour by means of the employment of many ingenious devices of drawing and shading. Since the result can be printed off at a single operation, it enables the atlas to be sold at a very low figure. The thirty-two pages of maps and plans in this atlas relate mainly to the nineteenth century; they are accompanied by a number of valuable and comprehensive historical tables and statistical diagrams. The whole is a mine of information; but, oh, its appalling hideousness!

MATHEMATICS.

"Bell's Mathematical Series."—*An Elementary Treatise on Differential Equations and their Applications.* By Prof. H. T. H. PIAGGIO. (12s. net.)

This is a well written and interesting introduction to differential equations. The writer has the capacity of seizing upon and bringing clearly into prominence the essential points of the argument, and there should be few who find difficulty in following even the more difficult sections, such as those dealing with existence theorems. The introductory chapter contains an account of the methods developed by Brodetsky and Wada of sketching the characteristics of differential equations of the first order. In a later chapter the methods of numerical solution due to Picard, Runge, and others are described. In this connexion some notice might have been taken of Cowell's very simple method of solving a set of equations of importance in dynamical astronomy. Two chapters are devoted to Frobenius' method of solving linear equations in series, the former illustrating by examples the character of the several cases which arise while a proof of the convergence of the series involved is given in the second. Simple linear partial equations are discussed immediately after the corresponding

ordinary equations, and thus a student of physics will find that a knowledge of the first four chapters will enable him to go a considerable distance in the theories of electricity and heat. Altogether it is a book to be commended.

MODERN LANGUAGES.

The Yearbook of Modern Languages. 1920. Edited by Prof. G. WATERHOUSE. (15s. net. Cambridge University Press.)

The first yearbook of modern languages is differentiated to some extent from other publications of the same kind by its combination of two elements—learning and education. The chapters dealing with pure learning are, as Prof. Waterhouse says in his preface, "a plain record of work done and progress made." Recent studies in seven languages—French, Provençal, German, Italian, Spanish, Russian, and Celtic—are in some cases described, in others formed into short-subject catalogues, by experts. In future years no doubt the circle of languages will be widened. The range of interests is already wide—philology, phonetics, linguistics, literature both medieval and modern, and even philosophy, are brought under review, though naturally all these titles will not be found under every language. A few of the articles—for example, that by Signor Angelo Crispi on recent Italian philosophy, and Prof. Fitzmaurice-Kelly's note on Rubén Darío, the South American poet—will appeal even to the unlearned. But the plain man will probably turn first to the careful summary of the Report of the Government Committee on Modern Languages, by the editor, and to Mr. Edward Bullough's article, "The Civil Service and Modern Languages." The latter is a powerful plea for greater breadth in modern studies, both at school and college. "Literature," which in these days means merely imaginative learning, is, in Mr. Bullough's view, not enough; by itself it gives but a poor and thin education. Literary productions, he argues, do not really "set forth a nation's mind"; they only illustrate it, and those who read nothing but imaginative literature are like children who look at the pictures without reading the book. What is wanted is Humanism, that is, the "study of man: his history, ideas, institutions, and ways of life; his attempts at solutions of his material, moral, and intellectual difficulties." With this we heartily sympathize, and we are glad that Mr. Bullough's paper has been bound up in this volume, because this will ensure its meeting the eye of those who most need to study it—namely, the university teachers of modern languages. The yearbook has an appendix of articles on the work of the Modern Language Association, under whose auspices it is published.

MISCELLANEOUS.

Paton's List of Schools and Tutors. Twenty-third Annual Edition, 1920-21. (5s. J. & J. Paton.)

This useful work of reference, compiled with the view of assisting parents in their choice of schools, will be specially welcomed at the present time, when so many schools are full and possible alternatives have to be considered. Particulars, excellently illustrated, are given, in a concise and practical form, of almost 800 public, preparatory, and boarding schools in different parts of the country for boys and girls, together with much other valuable information concerning colleges, tutors, and coaches for the various professions. Classified lists of the different types of schools and of schools offering special preparation for the Army, the Navy, the Civil Service, the professions, and for business, are included, and also lists of schools with Kindergartens attached, community schools, schools for the blind and the deaf, home schools for young children, schools for backward children, and schools of cookery and domestic science. Interesting articles on the State Services, the medical profession, engineering, physical training, nursery training, and agricultural and horticultural training for women, are interspersed throughout the volume, and details of scholarships offered are supplied. Another useful feature is the large map supplement showing railway, coach, and motor routes. Altogether the volume is a praiseworthy production, providing an excellent record of matters of interest to parents considering the education of boys and girls.

SCIENCE.

(1) *An Introduction to Palaeontology.* By Dr. A. M. DAVIES. (12s. 6d. net. Murby.) (2) *Invertebrate Palaeontology.* By H. L. HAWKINS. (6s. 6d. net. Methuen.) (3) *The Nomenclature of Petrology.* By Dr. A. HOLMES. (12s. 6d. net. Murby.)

(1) Dr. Davies's book is an ideal guide to serious students of palaeontology. His method is to describe with some fullness a few common species of each great group of fossils, and then to give a brief systematic account of the group and its distribution in time. The space allotted to each group is roughly proportional to its geological importance; thus, about half the book is devoted to the

brachiopoda and the mollusca. The descriptions are illustrated with an abundance of well chosen line drawings, and there are useful appendixes dealing with the collection and preservation of fossils, rules of nomenclature, and divisions of geological time. The book is so skilfully planned and written that, in spite of the large amount of technical detail included, it never becomes a mere descriptive catalogue, but succeeds in keeping the reader interested in fossils as evidence of the structure and manner of life of the animals and plants of past ages.

(2) While it is obviously from the point of view of the biologist that Dr. Davies considers his subject, it is no less clear that Mr. Hawkins is primarily interested in fossils as "medals of creation," as throwing light on the order and mode of deposition of the rocks in which they occur. The first part of his book deals with the general principles of the science, and can be read with pleasure and profit by beginners. The second part describes the distribution of the fossils characterizing the various geological eras, which are taken in order of their formation. To readers without some biological training, much of the material of these chapters will be unintelligible, though advanced students will find them very valuable as a résumé. The book contains sixteen plates of drawings and photographs by the author.

(3) All workers in petrology will feel grateful to Dr. Holmes for this glossary, which will be invaluable as a guide to the modern literature of their subject. In recent years rocks have been studied, described, and classified from so many points of view that the terminology has become very confusing. Dr. Holmes's main object has been to record the customary current meaning of each term, together with the original author and the date of its first use, and in the case of rock names the type locality. Useful features of the book are appendixes giving French and German terms, Greek and Latin prefixes and roots, and tables of classification of rocks.

Popular Chemical Dictionary. By C. T. KINGZETT.
(15s. Baillière.)

The author has attempted to produce in one volume a compendium of the laws and processes of chemistry, the chemical elements, the more important inorganic and organic compounds, and illustrated descriptions of chemical apparatus. He has more particularly in mind the needs of the "man in the street," who may wish to find concise information on any of the above points: for

example, on page 47 is the statement, "Bottles are generally made of glass"; on page 97, "constituent, an ingredient of a substance"; page 101, "corks . . . are used for stoppering bottles"; "dense" (page 109) is defined as "heavy, thick"; dysprosium (page 117) gives "a bromate which crystallizes between terbium and holmium." Under the heading of "Petroleum" (page 256), it is erroneously stated that this commodity is washed with soda and acid before distillation, and that the fraction at 50° to 70° C. is petrol, whilst that from 70° to 90° is benzene! At the present time the petrol fraction (gasolene) boils from about 50° C. to 200° C. By no means do all petroleum products "yield lubricating oils, vaseline, and paraffin wax." Picric acid is stated to be prepared by the action of nitric acid upon a variety of organic compounds, including aniline, but the manufacture of it is not indicated unless the section on explosives is consulted. In the description of the balance it is pointed out that the pans turn with one-tenth of a milligram, whilst the statement on cryohydrates (page 310) will scarcely pass muster with the modern school of chemists. The beehive oven is mentioned, and the context suggests that it is a by-product recovery oven; whilst vaseline (page 346) is spoken of as a distillation product of petroleum. It is difficult to see what good purpose such a book serves.

THE BASES AND FRONTIERS OF MODERN PHYSICS.—The University of London Board to Promote the Extension of University Teaching are anxious to promote an interest in science in accordance with the recommendations of Sir J. J. Thomson's committee, and have arranged a course of twenty-four lectures by Prof. John Cox on "The Bases and Frontiers of Modern Physics." The lectures begin at Gresham College, Basinghall Street, London, E.C.2, on Friday, October 1, at 7.30 p.m. The lectures are designed to meet the interest in the views of Einstein and others shown in the lectures of 1919-20 on practical applications of scientific discoveries. The earlier lectures will be devoted to a review of the concepts and laws of Nature on which traditional physics has been built up, and the later with Einstein's views and the principle of relativity. Tickets, and further information, may be obtained from the Accountant, University of London, South Kensington, S.W.7, or at the hall at the time of the lectures.

The BOARD OF EDUCATION emphasizes the usefulness of local history thus:—"It is essential that in each school attention should be paid to the history of the town and district in which it is situated. All great and important events which have taken place in the neighbourhood will naturally be chosen for more detailed treatment. Several changes, such as the foundation and dissolution of the monasteries, should be illustrated by reference to the effect upon the particular district. . . . There must, in all cases, be included a study of those actually existent historical remains such as castles, city walls, monasteries, which are accessible from the school, and in connexion with this the study of the earlier periods must include some knowledge of the elements of architecture."

Two History Readers which fulfil the above conditions.

The County of the White Rose.

An Introduction to the History and Antiquities of Yorkshire.

By A. C. PRICE, M.A., formerly Scholar of Pembroke College, Oxford; Author of "Leeds and its Neighbourhood," &c.

415 pages. Crown 8vo. With upwards of 70 illustrations and a folding map of the three Ridings. Strongly bound in cloth boards. 2s. 6d. net.

Education says:—"Much History has been made in Yorkshire, and here we get just enough about it to make us want to know more. There are chapters on the Land and its inhabitants, from the earliest historical times down to modern Yorkshire—castles, abbeys, churches, towns, each in turn are described and illustrated. There are 383 pictures, plans, and maps. The whole book is a treasury of information and most delightful reading."

The Story of the East Riding of Yorkshire.

By HORACE B. BROWNE, M.A.

368 pages. Crown 8vo. With 170 illustrations. Bound in Art Cloth Boards. Price 2s. 6d. net.

The School World says:—"Mr. Browne gives scarcely more than a reference to what will be found in the ordinary textbooks, and so saves space for more local details. The story is well told, geology, pre-history, architecture, all coming in for treatment, as well as the more obvious facts of social and political life."

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, Feb. 29, 1912.)

The Council is authorized by statute to form and keep a

REGISTER OF TEACHERS.

Teachers who satisfy the conditions of Registration laid down by the Council are admitted to the Official Register, which now includes over 60,000 names. Up to the end of the present year the chief condition is evidence of experience gained in schools which are approved for the purpose. Private teachers are required to produce also evidence of satisfactory attainments in addition to experience.

On and after 1st January, 1921,

these transitional conditions will be abolished and admission to the Register will be restricted to those who produce evidence of Attainments, Training in Teaching, and Experience, as prescribed by the Council. The Register is open to qualified teachers in all branches. There is a Registration Fee but no annual subscription.

AIMS of the COUNCIL

The Council is a body of forty-five teachers, appointed by Associations of Teachers. Its aims are: (1) To promote the unification of the teaching profession. (2) To establish a progressive standard of attainment and professional skill. (3) To secure for teachers a recognized share in determining the conditions under which they work. (4) To aid in the development of educational principles and their application.

UNREGISTERED TEACHERS should apply at once for particulars to

The Secretary,

Teachers Registration Council,

47 Bedford Square,

LONDON, W.C.1.

Opened by Her Grace Katharine Duchess of Westminster,

supplies a modern and comprehensive Training for Private Secretaries, Correspondents, Accountants, and Journalists. It confers Diplomas in Secretarial Training. Actual experience in Secretarial work and responsible office management is provided in the College Offices. A choice of appointments is guaranteed every Graduate. The College is both Day and Residential.

PROSPECTUS AND SOLICITOR-GENERAL'S SPEECH POST FREE.

MACMILLAN'S NEW LIST.

A Geography of Asia. By JOSEPH MARTIN, B.Sc., Senior Geography Master, Coopers' Company's School, Bow, E. With numerous Maps and Illustrations. 5s.

[*Macmillan's Practical Modern Geographies.* *The Guardian.*—"The fine series of 'Macmillan's Practical Modern Geographies' has been enriched by a Geography of Asia, a work that it would be difficult to overpraise. . . . It would be hard to name a better example of the improved modern methods of teaching geography."

Commercial Arithmetic and Accounts (in Three Parts). By H. H. GREEN, B.Sc., Secondary School Lecturer in Commercial Arithmetic, East Ham Technical College, and THOMAS FRANKLIN, late Lecturer in Book-keeping and other Commercial Subjects, London County Council. Parts I-III, 2s. each. Complete, 6s.

The Arithmetic of the Decimal System. By J. CUSACK, LL.D., Founder and Principal of Cusack's Training College. 6s.

[*The Scottish Educational Journal.*—"We can only applaud Dr. Cusack's heroism, and strongly advise all teachers to procure his work. They will be doing useful service if they read it to become advocates of the only sane simplified system of teaching arithmetic."

5th Edition completely revised.

A Complete Treatise on Inorganic and Organic Chemistry. By the Right Hon. Sir H. E. ROSCOE, F.R.S., and C. SCHORLEMMER, F.R.S. Vol. I. The Non-Metallic Elements. Fifth Edition. Completely revised by Dr. J. C. CAIN. 30s. net.

A Classbook of Organic Chemistry. By J. B. COHEN, Ph.D., B.Sc., F.R.S., Professor of Organic Chemistry, The University, Leeds. Vol. I.—For First Year Medical Students and Senior Science Students in Schools. 4s. 6d. Vol. II.—For Second Year Medical Students and others. 4s. 6d.

[*The Journal of State Medicine.*—"We can cordially recommend this work together with its predecessor to medical students and others who have to take a course in organic chemistry."

European History Chronologically Arranged. 476-1920. By ARTHUR HASSALL, M.A. New Edition. 12s. net.

British History Chronologically Arranged. Part I, 55 B.C.—A.D. 1914. Part II, 1915-1919. By ARTHUR HASSALL, M.A., Student and Tutor of Christ Church, Oxford. 20s. net.

[*The Observer.*—"It is an easy book to consult, and its winnowing of the important from the unimportant is most judiciously done. For those particularly who have to verify points of modern history in a hurry it will be an indispensable friend."

LIFE AND WORK SERIES.

A Brief Sketch of Social and Industrial History. By EDWARD CRESSY, Author of "An Outline of Industrial History." Illustrated. 3s. 6d.

Groundwork of English Grammar. By J. WELTON, D.Lit., M.A. 1s. 3d.

Also *Teacher's Handbook* to same. 2s.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.

New Volume.

A Naturalist on the Amazons. By H. W. BATES. Abridged and Edited for Schools by F. A. BRUTON, M.A., Litt.D. With 80 Illustrations. 2s. 6d.

Mind-Energy: Lectures and Essays. By Prof. HENRI BERGSON. Translated by Prof. H. WILDON CARR. 10s. net.

The Modern Reader's Bible for Schools: The New Testament. By Prof. R. G. MOULTON, M.A., Ph.D. With Map. 12s. net.

New and Forthcoming Publications of W. & A. K. JOHNSTON, Ltd.

Aftermath: A Geographical Study of the Peace Terms. By M. I. NEWBIGIN, D.Sc. 5s. net. Cheap Edition, 3s. 6d. net.

This book, by the well-known editor of the "Scottish Geographical Magazine," gives a full explanation of the many geographical changes effected by the various Peace Treaties. It should appeal strongly to geography Teachers and to all those interested in international politics.

Multum in Parvo Atlas of the World. New Edition with Peace Treaty boundaries. More than 100 maps and plans and full geographical index. 3s. 9d. net. [Immediately.]

Full allowance in all cases will be made for age. Candidates will be examined at Lancing, unless further notice is given to the contrary.

For Prospectus and all additional information, apply to the Head Master, Rev. H. T. BOWLER, Lancing College, Shoreham, Sussex.

MILL HILL SCHOOL.—An Examination will be held on Thursday, November 18th, and the two following days, when several ENTRANCE SCHOLARSHIPS, value £10 each, will be offered for competition.

The Governors will consider the financial circumstances of any successful candidates with a view to the grant of further emoluments. In appropriate cases, scholarships to the value of £100 a year each may be granted.

For further information apply to THE BURSAR, Mill Hill School, N.W.7.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships and Exhibitions, varying from £50 to £15, is held annually in May. General knowledge is required in preference to specialization in one subject. Exhibitions also awarded on the Common Entrance Examinations.

Further details from—

S. M. TOYNE, M.A., Head Master.

ST. JOHN'S SCHOOL, LEATHERHEAD.

—In addition to sons of living clergy elected on the Free Foundation, Supplementary Foundationers (sons of living clergy only) are received at the annual fee of 40 guineas. The School is also open to sons of Clergy or Laymen paying full fees, viz., Clergy 80 guineas, Laymen 80 guineas per annum. Day-Boys 33 guineas per annum. Modern School buildings for 240 boys. Boys prepared for the Universities, Army and Civil Service Examinations, &c. Leaving Scholarships. One or two Albany Scholarships awarded each year. Also three Entrance Scholarships, value £40, £30, and £20 per annum. Scholarship examination for 1921 on the first Wednesday in July; entries close the last day of June. For Prospectus, &c., apply to the Head Master, the Rev. E. A. DOWNES.

NEWNHAM COLLEGE.—NINE SCHOLARSHIPS, one of £60, and others of £50 and £35, are offered in March on the results of a joint examination with Girtton College. A certain number of EXHIBITIONS may also be awarded. Particulars can be obtained from the PRINCIPAL.

WELLINGTON COLLEGE.

Seven OPEN SCHOLARSHIPS, annual value £50 each (which may be increased to £80 in cases of need), and one ROBERT HENRY WENTWORTH HUGHES SCHOLARSHIP, of the value of £45, will be offered for competition in November next.

Two of the open scholarships will, under certain conditions, be restricted to boys whose fathers have given their lives for their country.

Candidates must not be 14 on December 31st, 1920. The examination will be held at Wellington College on November 9th and two following days.

For full particulars apply to THE BURSAR, Wellington College, Berks.

WEYMOUTH COLLEGE.**SIX SCHOLARSHIPS for CLASSICS or MATHEMATICS,**

of the value of £40 downwards, and open to boys between twelve and fourteen.

are offered annually for Competition.

Next Examination will be in June, 1921.

For Prospectus and other information apply to the HEAD MASTER.

WOODBIDGE SCHOOL.

Three or four FOUNDATION SCHOLARSHIPS, open to boys under 15 years of age, will be competed for next May. These Scholarships exempt the holders from tuition fees (£10-£12), and usually carry with them Entrance Scholarships, bringing the total value to amounts varying from £25 to £50, according to the merit of the candidates.

For full particulars apply to the HEAD MASTER.

Continental Schools

COLLÈGE DE CANNES, FRANCE (High School for Boys). Fine building; every comfort. Private rooms. Special arrangement for foreigners wishing to speak French fluently. 700 francs a term.

Vacation Classes.

See also page 707.

THE ENGLISH FOLK DANCE SOCIETY.

Honorary Director: CECIL J. SHARP.

THE CHRISTMAS VACATION SCHOOL of FOLK SONG AND DANCE will be held at **CHELSEA** from December 29th to January 4th inclusive. Particulars can be obtained from

THE SECRETARY,
7 Sicilian House,
Sicilian Avenue,
Southampton Row,
W.C. 1.

DALCROZE EURHYTHMICS.

VACATION CLASSES will be held
DECEMBER 29th to JANUARY 4th
inclusive.

Prospectus on application to—

THE DALCROZE SCHOOL OF EURHYTHMICS, LTD.,
23 Store Street, London, W.C. 1.

UNIVERSITY OF GRENOBLE (France).

WINTER TERM, 1920-1921.
3rd November to March 1st.

COMPLETE Course of University
Study in Letters, Science, Law, Medicine.
Polytechnic Institute. Commercial Institute.
Special Lectures on French Language and Literature for foreign students.

Complete Course of Phonetics. Practice in Reading and Speaking. (Groups of 6.)

Practice in Translation and French Composition.
Fees: 150 francs per term. (Exclusive of Practical Exercises.)

Family Boarding Houses from 60 to 150 francs a week.

Every Winter Sport (skating, sledging, ski, &c.), in the finest province of France.

More detailed information sent free on receipt of demand addressed to

COMITÉ de PATRONAGE des ÉTUDIANTS ÉTRANGERS,
UNIVERSITÉ DE GRENOBLE (France).

Posts Wanted—continued.

These School and Teachers' Advertisements are continued from page 710.

PRINCIPAL of school highly recommends her head English teacher for position of responsibility. Would consider partnership or succession. Gentlewoman; registered. First-rate teacher and organizer. Guide officer. Address—No. 11,093.*

FRENCH Lady, Protestant, four years' experience in English schools, fluent English and German, seeks post for January. Would travel—Mademoiselle FOUQUET, Hill Court, Glengary, Co. Dublin.

FRENCH MISTRESS (diplômée), with long experience in good schools, requires a post in January. Good disciplinarian. Highest references. Address—No. 11,104.*

HOUSE MISTRESS or LADY MATRON.—Experienced, Scottish, age 43. Desires re-engagement January. Salary £120. Address—No. 11,097.*

Posts Wanted—continued.

TWO sisters seek posts together for January. One, Cambridge Higher Local Certificate, registered teacher, is able to take all general subjects and games. The other is willing to act as Assistant Housekeeper. Address—No. 11,096.*

FRANÇAISE, Brevet Supérieur, seeks post in Girls' School. London or South preferred. Mlle MAZALEYRAT, Woodlands, Brecon.

FRENCH Girl Student, Bachelor of Letters, seeks post of FRENCH MISTRESS in a Boarding School in the South of England. Address—No. 11,099.*

FRENCH MISTRESS (certificated, registered), long residence in France, experienced teacher, seeks reappointment in School accessible from Barnet. Disengaged. Non-res.—29 Normandy Avenue, Barnet.

A LADY who is an experienced English teacher requires a position as VICE-PRINCIPAL or HEAD MISTRESS in a Private School. Good organizer, thoroughly competent and accustomed to responsibility. Address—No. 11,100.*

POST as HOUSE MISTRESS, LADY HOUSEKEEPER, or SECRETARY desired by Lady, eleven years' successful School and College experience. French, German, typewriting, accounts, correspondence, catering, control of staff. Excellent testimonials. Salary £90. Address—No. 11,101.*

GENTLEWOMAN offers general assistance to Principal of country School—garden, kitchen, house, correspondence. Practical person of common sense and varied experience, including Colonial. Absolutely trustworthy, middle-aged. C. of E. £60-£70 resident. Address—No. 11,102.*

FRENCH teacher, with experience and good references, seeks post in private school near London. Address—No. 11,107.*

FRENCH MISTRESS (diplômée), with long experience in good schools, requires a post in January. Good disciplinarian. Highest references. Address—No. 11,111.*

Posts Vacant.

POSTS ABROAD.

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holbein Place, Sloane Square, London, S.W.1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

TRANSVAAL SECONDARY SCHOOLS AND TRAINING COLLEGES. TEACHERS, both men and women, are required for the Secondary Schools of Transvaal Province, South Africa, in which English is the medium of instruction, and for the Normal or Training Colleges.

The ordinary Secondary School prepares pupils for the Matriculation Examination of the three Universities of South Africa. Teachers able to take any of the usual Matriculation subjects may be appointed. There are also vacancies for teachers of Vocational subjects connected with commerce, trades, or crafts, and Domestic Science.

Teachers are also required for general or special work in Training Colleges.

Suitable candidates will be interviewed. Free passages will be provided for those elected.

It is desirable that candidates appointed should be able to sail in time to take up duty at the beginning of the first term (towards the end of January) of 1921.

Applications may be sent at any time up to the 30th November, 1920, to the SECRETARY, Office of the High Commissioner for the Union of South Africa, 32 Victoria Street, London, S.W.1, from whom forms of application and further particulars may be obtained.

All applications will be dealt with as soon as possible after they are received.

MISS SELBY'S EDUCATIONAL BUREAU, 1 VICARAGE ROAD, EASTBOURNE. —Required: LECTURER IN EDUCATION (important College); VACANCIES, good schools. Assistants, Lady Matrons disengaged. Principals and Assistants invited to register. Personal attention given.

Posts Vacant—continued.

LEICESTERSHIRE COUNTY COUNCIL EDUCATION COMMITTEE.

PHYSICAL TRAINING.

Applications are invited from suitably qualified men for the position of ORGANIZING INSTRUCTOR OF PHYSICAL TRAINING. Salary £400 per annum, and travelling allowance. Applications, giving full details of general education, special training, experience, and copies of testimonials should be sent before November 10th to

W. A. BROCKINGTON,
33 Bowling Green St.,
Leicester. Director of Education.

EAST SUFFOLK COUNTY EDUCATION COMMITTEE.

STOWMARKET COUNTY SECONDARY SCHOOL.

Required, in January next, an ASSISTANT MASTER or MISTRESS (graduate) to be responsible for the teaching of French throughout the school.

A knowledge of modern methods essential, and previous experience in secondary schools desirable. Salary (pending issue of Burnham Report): men, £190 to £350; women, £175 to £300. Previous experience in secondary schools counted up to ten years in fixing commencing salary.

Apply on Form 23, a copy of which may be obtained from
W. E. WATKINS,
County Hall, Ipswich.

LEARN DUTTON'S 24-Hour SHORTHAND.

Booklet free. — Dutton's College,
Desk T 97, SKEGNESS.

LICHFIELD AND SOUTHWELL DIOCESAN TRAINING COLLEGE FOR SCHOOL MISTRESSES, DERBY.—Wanted, as soon as possible, a resident LECTURER in Mathematics and Geography, to take the place of a member of the staff who has been appointed to the Principalship of Hockerill Training College, Bishop's Stortford. Applicants should be Churchwomen, and should state age, particulars of education, degree, experience, present salary, and salary asked for. Apply immediately to Canon BATER, Principal, Training College, Derby.

TESTIMONIALS TYPEWRITTEN FREE.

Ten copies of any one testimonial (not exceeding 200 words) typewritten free of charge for any new client on receipt of 6d. to cover cost of paper and postage. Size: 4to or fcap. Orders executed by return of post. Full price-list, with specimens of typewriting and printing, sent on application.

KING, 45 Bedford Row, London W.C. 1.

KENT EDUCATION COMMITTEE.

COUNTY SCHOOL FOR GIRLS, TUNBRIDGE WELLS.

Required, in January, HISTORY SPECIALIST, able to take Advanced Course work. Salary according to the Committee's Scale.

Forms of application will be forwarded by Dr. J. LISTER, Technical Institute, Tunbridge Wells, on receipt of a stamped addressed envelope.

E. SALTER DAVIES,
13th October, 1920. Director of Education.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE.

BINGLEY TRAINING COLLEGE.

Principal: Miss M. S. LILLEY, M.A.

APPOINTMENT OF LECTURER IN BOTANY. The West Riding Education Committee invite applications for the above appointment from women holding a University degree or its equivalent.

Initial salary £290-£330 (non-resident), according to qualifications and experience, rising by annual increments of £10 to a maximum of £440. (The above amounts include bonus at the rate of £60 per annum).

The present scale will probably be revised after the issue of the Burnham Scale for Teachers in Secondary Schools.

Last date for receipt of applications: 13th November, 1920.

Full particulars and forms of application may be obtained from the EDUCATION DEPARTMENT (Secondary Branch), County Hall, Wakefield.

TYPEWRITING.

TESTIMONIALS, 6d. per dozen. MANUSCRIPT, 8d. per 1,000 words. Examination Papers. Perfect work. — M. GLENISTER, 3 Friern Park, N. Finchley, N.12.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Bice, 3 Ludgate Broadway, E.C. 4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

Cambridge University Press

CAMBRIDGE PLAIN TEXTS

Five volumes now ready, price 1s 3d net each.

**De Musset, Carmosine ; Lamartine, Méditations ; Dumas, Histoire de mes Bêtes ;
Gautier, Ménagerie Intime ; Bossuet, Oraison Funèbre**

This new series of French Plain Texts is under the general editorship of
Dr H. F. STEWART and Mr A. A. TILLEY. Each volume consists of 50-70
small octavo pages of text, preceded by a short biographical note on the author.

Cambridge Readings in French Literature. Edited by ARTHUR TILLEY. Crown 8vo. With 24 reproductions of famous pictures. 8s net

Regnard. Le Joueur. Edited by ARTHUR TILLEY, M.A. Crown 8vo. 4s net

PITT PRESS SERIES of French classics. More than fifty volumes have been published in this series. A list will be sent on application.

Physics. The Elements. By N. R. CAMPBELL, Sc.D., F.Inst.P. Large royal 8vo. 40s net

This book is an introductory volume to a treatise on physics which shall expound systematically the accepted doctrines of the science in such a way as to exhibit clearly the fundamental propositions on which they are based. It consists of two parts, one on the nature, meaning, and basis of scientific propositions, and one containing a careful examination of the process of measurement which characterises physics and distinguishes it from other sciences

The Experimental Basis of Chemistry. Suggestions for a series of Experiments illustrative of the Fundamental Principles of Chemistry. By IDA FREUND. Edited by A. HUTCHINSON, M.A., and M. BEATRICE THOMAS. Demy 8vo. With 71 diagrams. 30s net

A Course of Modern Analysis. An Introduction to the General Theory of Infinite Processes and of Analytic Functions ; with an account of the Principal Transcendental Functions. By E. T. WHITTAKER, D.Sc., F.R.S., and G. N. WATSON, Sc.D., F.R.S. Royal 8vo. Third Edition, revised. 40s net

Cambridge Geographical Readers V, The British Empire. General editor, G. F. BOSWORTH, F.R.G.S. Crown 8vo. With 82 illustrations. 4s 6d

This book was mainly written before 1915, but the war caused its publication to be postponed. Since the signing of peace, opportunity has been taken to complete the book and bring it up to date. The last two chapters describe the efforts made by the Dominions and Possessions of Britain to win the war, and give some account of the new lands which have been brought under British control.

Previously published :—I, The World and Its Wonders, 2s 9d ; II, England and Wales, 2s 9d ; III, The British Isles, 3s 6d ; VI, Some Great Regions of the World, 3s 6d

Elementary Dynamics. A Textbook for Engineers. By J. W. LANDON, M.A., University Lecturer in Mechanical Engineering, Cambridge. Crown 8vo. 10s 6d net

This book is primarily written for engineering students, the majority of whom find considerable difficulty in grasping the fundamental principles on which the subject is based. The author has presented the principles of elementary dynamics, and explained the meaning of the physical quantities involved, partly by definition and description, but mainly by worked examples in which formulæ have been avoided as far as possible

The Elements of Plane Geometry. By C. DAVISON, Sc.D., formerly Mathematical Master at King Edward's High School, Birmingham. Crown 8vo. 10s net

Though a few of the proofs given in this textbook are new, the most important feature in which it differs from its predecessors is the provision of numerous sets of exercises. The plan of the book is shown by the following table of contents: Congruent Triangles, &c. ; Parallel Straight Lines, &c. ; Areas ; The Circle ; Angles in a Circle ; Areas (cont.) ; Proportion and Areas ; Miscellaneous Theorems ; Problem Papers ; Answers to Numerical Exercises

Papers Set in the Mechanical Sciences Tripos 1912, 1913, 1914, 1915, 1919. Crown 4to. 4s 6d net

Papers Set in the Qualifying Examination for the Mechanical Sciences Tripos 1914, 1915, 1918, 1919, 1920. Crown 8vo. 2s 6d net

OCCASIONAL NOTES.

THE recently published Report of the Burnham Committee on Salaries in Secondary Schools is by far the most important event in secondary education during the past few years so far as the teachers in the schools are concerned. The actual scales recommended by the Committee are lower than those which the associations of teachers in these schools have declared to be adequate, and will probably not be welcomed with enthusiasm, though it seems probable that they will be accepted. They will, it is hoped, put an end to the uncertainty and hardships of the chaotic conditions now existing. The recommendations as to the establishment of the scales show that the Committee have solved—in the main satisfactorily—many, if not most, of the knotty problems as to qualification, service and "carry over" with which they had to deal. Indeed, the members of the Committee may be congratulated upon the result of their work. Taking scales and recommendations together, the teachers may well consider that, with the application of the report, they gain much for which they have been fighting during the last two decades. They have secured a national salary scale for all schools maintained, or aided in salary, by local education authorities; and this must react favourably upon schools outside that category. They have obtained a principle for which they have long striven, the right to count all previous satisfactory service when position on a scale is fixed. Increments, except when service has been proved to be unsatisfactory, will be automatic, and the deeply hated "bar" disappears. Much remains to be settled by negotiation between authorities and teachers, and the right of appeal to the Reference Committee which has been set up will, no doubt, be exercised often enough; but, with good will on both sides, there should be no insuperable difficulties.

The objects of the Report are two-fold: to allay discontent among existing teachers and to attract entrants to the profession. The Report has yet to be accepted by both sides; even when this has taken place, he will be a bold man who ventures to prophesy either success or failure on either count.

IT is difficult, if not impossible, to believe that the signatories of Report B ever expected for one moment that they would live to see their proposed new University for Women in being. There is something about the bland suggestion which reminds one of the undergraduate's refuge: "These poems were not written by Homer, but by another man under the same name." The authorities of Girton and Newnham Colleges do not ask for, and therefore presumably do not want and will take no step to secure, a University of Women at Cambridge. Women now share the work of men in every department of intellectual life throughout the civilized world, and in every university in the United Kingdom they now have their place—excepting only in the University of Cambridge. We regard the whole question with the gravest interest, but we naturally envisage chiefly the effect these proposals would have upon the education of the country. We have advanced too far along the path of progress in the education of women to be content with a substitute for the training which nothing but university life can give. As between "women at Cambridge" and "Oxford women," who can doubt that in the future the prizes of the educational career would fall to those who need make no explanation and offer no apology for their position? Who can doubt that the most promising students would seek either the old university which now gives them their rights or one of the newer universities which have never withheld them? We heartily hope to hear in the near future that Cambridge has not been ashamed to follow in this matter the generous lead of Oxford.

THE proof of the pudding is said to be in the eating, and the soundness of a reform may be measured by the enthusiasm with which it is received by those most intimately concerned. If they are content to have their work judged by this criterion, those who have laboured in recent years for the abolition of Greek as a compulsory subject in Responsions should be well pleased. In the examination last September candidates were offered the choice of being examined either under the old regulations, including Greek, or under the new scheme, without Greek. Of the 228 men who sat for examination, 142 availed themselves of the new licence, as also did 26 of the 50 women candidates. The men would, of course, include a larger proportion of the type of students (science and others) for whose sake the new regulations have been framed than would the women, who are chiefly students of a literary type. Many critics are not without apprehension as to what will be the ultimate effect upon Oxford of the admission of Greekless students, and we should be among the first to discourage any so-called reform which aimed at undermining the position of Greek in our educational curriculum; but we hope and believe that Oxford will be the gainer by having opened her doors to a new type of student. At any rate, there are sufficient friends of Greek in Oxford to watch the interests of a language so

vital to our own national education, and may we not hope that those who have been the first to be admitted under the new regulations will feel it incumbent upon them to do their utmost to prove that Oxford was wise to temper her Hellenes with a mixture of *βαρβαροι*?

IN Circular 1153, which deals with the medical inspection of secondary and continuation schools, the Board of Education have, for the first time, given official sanction to the inclusion in medical inspections of observations of a specifically anthropological character additional to the measurement of stature, chest, and weight. In the schedule giving the details to be recorded by the medical officer, which is appended to the Circular, it is stated that further anthropometric data, such as, for example, the length and breadth of the head and the colour of the hair and iris, may be noted, if desired. The necessity for an anthropological survey of the people of this country, both on scientific grounds and as a matter of practical importance, has long been urged by anthropologists. It has been pointed out repeatedly that knowledge of the physical characters of the population and of the racial types of which it is composed is essential for the elucidation of a number of problems of vital importance to the educationist and to the State. Without study of the racial factors involved, it is impossible either to estimate with any certainty the effects of environment, to gauge physical deterioration, or to assign limits to the variability which is not inconsistent with normal development. In the circumstances, any official recognition which encourages a record of the facts is welcome. But the powers given by the Circular are permissive only. Whether any action is taken will depend on the local authorities and the zeal of individual medical officers. As the essential need is that a standard should be set up for the whole country, a partial survey is likely to be of little practical value. It was on this ground that the British Association, when meeting at Cardiff, urged upon the Board of Education the necessity of making compulsory the inclusion of such anthropometric observations in the medical schedule. It was further suggested that the record of such observations should be continued for a period of five years, thus giving ample opportunity for the observation of growth, while avoiding the accumulation of an overwhelming mass of data.

AT a recent meeting of representative managers of London elementary schools strong protests appear to have been made against the decision of the London County Council to admit head teachers to managers' meetings, and a resolution was carried urging the withdrawal of the regulation. In favour of this resolution, it was argued that it is undesirable to allow the Council's employed officials, in the persons of the teachers, to be present at the deliberations of managers, and to know how they voted. On the other side, it was pointed out that the head teachers of certain secondary schools attended the managers' meetings, and that the practice worked well. We may further point out that in all places of higher education which are not under local education authorities—and, we believe, in many which are under such authorities—the presence of the principal at meetings of the governing bodies is regarded not only as desirable, but as absolutely indispensable. How,

indeed, is it possible to have an informed and intelligent discussion, whether about an elementary school or about a university college, when the only person who knows all the facts, and is in daily contact with the teachers, the pupils, and the parents, is artificially debarred from sharing in the discussion, and even from supplying information at the moment it is needed? Of course, in the exceptional case when the head teacher's own personal position is being discussed, he would naturally withdraw. On the main question, however, the London managers are not only seeking to keep the heads of elementary schools in a disadvantageous position, but they are surely out of harmony with the whole trend of public opinion regarding the relations of employers and employed.

IT is beginning to be realized that the intentions of the Education Act, 1918, particularly in regard to extended secondary and central school accommodation, specialized instruction in elementary schools, and the provision of continuation and nursery schools, must, to a really alarming degree, remain mere castles in the air, unless the problem of the supply of teachers can be solved. The first essential—that of placing the salary question on a reasonable basis—has been receiving the serious attention that it deserves. But much more remains to be done, and unless it is done soon the consequences may be little short of disastrous. Hitherto the Board of Education has confined itself to pointing out the facts, and making almost pathetic appeals to the local authorities to bestir themselves. Meanwhile, the unprogressive local authorities do nothing; the progressive are placed in an awkward financial position as regards their training colleges; and some of the voluntary training colleges are on the brink of bankruptcy. The supply of candidates for the profession, in all its grades, is notoriously deficient; and the means of training them are gravely imperilled. Prompt action by the Board and the local authorities, in consultation, we would add, with the teachers' associations, both elementary and secondary, ought surely to be taken.

THE Director of Education for the City of Manchester, Mr. Spurley Hey, has collected some interesting information from eighty-two local education authorities regarding the supply of teachers. Replies to the question, "Has any shortage of intending teachers been experienced by your authority during the past ten years?" are, as might have been anticipated, generally in the affirmative. The chief causes of the shortage are, as a rule, stated to be the poor financial prospects of teaching, the greater attraction of other occupations, and the duration and expense of the training. Among other reasons given is one to which we have had occasion to refer in this column, *i.e.* the abolition of the pupil-teacher system. Another more disturbing cause referred to by several of Mr. Hey's correspondents is the direct discouragement by members of the profession to young persons who might otherwise enlist. We hope and believe that this attitude is exceptional. The answers to the inquiry as to whether there has been any recent increase in the number of entrants to the profession of teaching are not, on the whole, discouraging, although it cannot be said that "the ayes have it."

Managers'
Meetings.**

**Causes of the
Shortage.**

A Special Training Course for ex-service Men.

THE Ministry of Labour, in conjunction with the Board of Education, have established at Sarisbury, in Hampshire, a residential training college, in which ex-service men not possessing, or at any rate not necessarily possessing, the usual entrance qualifications, may be prepared for elementary - school work, but with special reference to manual occupations. It is also understood that the provision of other colleges of the kind is in contemplation. There are, of course, two ways of regarding the experiment. As a temporary expedient for giving the best kind of aid to ex-service men, and for helping to solve the urgent problem of the supply of teachers, it will, we think, be almost universally approved. Opinions may differ, however, as to the wisdom of a relatively permanent arrangement of the kind. It may be felt by some that over-anxiety to secure teachers may lead to the adoption of unsatisfactory methods which will soon defeat their own object. On the other hand, it may be suggested that the normal course of preparation, including the secondary school and the training college curricula, tends to the over-production of teachers trained on exclusively academic lines; and that it may well be supplemented by a course designed on more practical lines, especially having regard to the provision of the Education Act requiring practical instruction to be given in elementary schools. The experiment certainly needs to be watched. Meanwhile it can do no harm, provided the personal fitness of candidates is guaranteed.

The London University Site.

THE Senate of the University have accepted Mr. Fisher's offer of the Bloomsbury site; but they have accepted it with important reservations. The first is that any grant for maintenance or rates for the new building shall not be reckoned as part of the grants made for educational purposes. The Senate desire to allocate the portions of the site in any way they please, and will not surrender the present buildings until the new are ready, and these new buildings are to contain 50 per cent. more floor space than the present. They decline to vacate King's College until after the agreement about the administrative offices at the Imperial Institute has been ratified; for it is evident that the Government need the King's College site as an enlargement of Somerset House much more than the building at South Kensington. But Mr. Fisher will have some difficulty in persuading the Government to spend nearly three millions of money on this plan. The University College party has gained its majority in the Senate, but its victory is not all it hoped. The great objection to the plan was that it would probably lead to the extinction of certain chairs; for if A., a professor of European celebrity, were lecturing at one college, who would go to hear B., an average professor, at the college next door? Several graduates, too, have suspected that, with this collection of the University into one quarter would come the suppression of the external student, a side of the University which is regarded by them as the chief *raison d'être* of its existence.

Primary Education.

THE results of the formal examination of selected material from elementary schools seems to imply either that we expect too much from the system of primary education or that there is something lacking in the methods of teaching. The Somerset Education Committee

recently held a qualifying examination for candidates for free places in public secondary schools in the county. There were 784 candidates, and of that total 287 reached a satisfactory standard in elementary subjects. In another administrative area the pupils who enter for an examination for junior scholarships are usually between eleven and a-half and twelve and a-half years of age. Attending the elementary schools in the area there are 8,000 children within these age limits, and of this total the average number of candidates presented for examination during the past ten years has been about 1,200. Of this number, which represents 15 per cent. of the available material, only a little more than one-fourth succeeded in reaching a creditable standard in the subjects of arithmetic and English. The conclusion seems to be that, unless some improvement can be effected in the primary stages, the results of still further extending the period of compulsory education are likely to be disappointing.

West Riding Evening Classes.

AN exceptionally complete scheme for the generous encouragement of evening schools, technical schools, and classes and schools of art appears to be contemplated under the regulations of the West Riding of Yorkshire Education Committee. Exercising the powers conferred upon them by the Act of 1918, the County Council have resolved, subject to their approval of the arrangements and the expenditure involved, to take over financial responsibility for such developments of higher education as may be initiated and carried out in the administrative area. For the present the work remains entirely upon a voluntary basis, and it is recognized that the success of any scheme depends upon the efforts put forward by persons resident in the various localities who are prepared to render voluntary service. On the other hand, it is suggested there is need to create a local public opinion in favour of such education, and it is no less essential that the provision made should be as efficient and complete as circumstances allow. In addition to evening schools, technical schools, schools of art, and technical classes, the regulations contemplate the subvention of efficient non-vocational teaching for adults who may or may not have attended more systematic forms of instruction. The principal aim is to provide education as a means to increasing the interest and fullness of life and the possibilities of civic service. It is also desired to supply education for leisure time as distinguished from instruction as a means of increasing technical skill in industry. In these days, more particularly, we are in danger of forgetting that a man "needs knowledge not only as a means of livelihood, but as a means of life."

Lancashire Medical Inspection.

IT is not so very long ago that we compelled parents to send their children to school, and did not concern ourselves—except in so far as the teachers were vigilant—whether the boys and girls were in a physical condition to be taught or to learn. The School Medical Service has remedied this defect in our policies, and in the county of Lancashire the work appears to be done with commendable care and efficiency. The eleventh annual report of Dr. Butterworth states that the county is divided into smaller areas, which are assigned to medical officers and nurses. During the year over 40,000 children were examined by the medical officers, and 181,329 by the school nurses. Over 9,000

children were recommended for specific treatment, and the medical officers interviewed nearly 5,000 parents at the schools. This represents a large amount of well directed effort. A striking testimony as to the value of the work done by the service is shown in the statistics relating to children found to be in a verminous condition. In 1910 there were 9,000, and in 1914 this total had decreased to 3,732. During the War the supervision was largely withdrawn, owing to the departure for naval and military service of the majority of the staff, and, in consequence, the number of verminous children in 1919 was nearly double that of 1914. Dr. Butterworth's report contains much useful information regarding the prevention of general disease, the causes of rheumatism in school children, and among other papers of particular interest is a contribution on the causes and associated conditions of retarded educational progress.

OF the multitude of problems raised by the Education Act, 1918, not the least is that which refers to the inclusion, in the curriculum of elementary schools, of "practical instruction, suitable to the ages, abilities, and requirements of the children." About thirty years ago, "manual instruction" began to be organized in large towns, but certainly on wrong lines. It was formal and merely imitative in character; it was quite wrongly confined to the older children; and, being provided for in separate "centres," under the control of separate head teachers, it got entirely out of any relation to the rest of the child's education. Not only so, but the teaching tended to fall into the hands of persons who, though skilled craftsmen, had not the training which enabled them to view handwork as part of an organized scheme of general education. The work done has been very good of its kind, but it is the kind that is in question. We trust the time is not far distant when every school will have its workroom. Meanwhile, we welcome the Board of Education's announcement, in Circular 1177 of September 2, 1920, that after January 1, 1921, a person desiring recognition as a handicraft teacher in an elementary school must not only be competent in the special sense, but must also be qualified for recognition as a certificated, or at least as an uncertificated, teacher. In other words, the handicraft instructor of the future must have added his special qualifications to an adequate general education, and to a broader outlook upon the work of an elementary school.

SCALES OF SALARIES FOR SECONDARY SCHOOL TEACHERS.

By J. H. ARNOLD.

THE Standing Joint Committee consisted of representatives of local education authorities on one side and of associations of teachers on the other, in equal numbers. The County Councils and the Municipal Corporation Associations, together with the Association of Education Committees and the London County Council, appointed the authorities' panel, and the Associations of Head Mistresses, Head Masters, Assistant Mistresses, and Assistant Masters, together with the National Union of Teachers, appointed the teachers' panel. Lord Burnham was the chairman, and Messrs. Leslie (secretary of the Association of Education Committees) and Dunkerley (organizing secretary of the Assistant Masters' Association) acted as secretaries of their respective panels.

In considering their report, which has just been issued, it must be noted that its recommendations have yet to be accepted by the bodies concerned, and that, even when accepted, they will apply only to schools maintained by local education authorities, or to those in which these authorities accept responsibility for the salary scales. Nevertheless, the Committee itself anticipate that their findings will receive the serious consideration of the governing bodies of other schools, and there is little doubt but that this will be the case. An examination of the recommendations will show that, though the Committee have laid down definite salary scales and general principles for their application, much is left for decision by the separate authorities after, in many cases, negotiation between the authorities and the teachers' organizations. Matters of disagreement between an authority and its teachers, whether as to adoption, change, or interpretation of a salary scale, are to be referred to the Committee, either by the authority or through the executive of one of the teachers' associations represented on the Committee, acting in the latter case with the consent of the teachers' panel. For this purpose a "Committee of Reference" is to be set up, consisting of ten members nominated by the authorities' panel and ten nominated by the teachers' panel of the Joint Committee, under the chairmanship of Lord Burnham or his nominee and with the same panel secretaries, Messrs. Leslie and Dunkerley.

The minimum duration of the scales will be from September 1, 1920, the proposed date of the introduction of the scales, until April 1, 1925, during which period the teachers' associations agree not to press, or countenance pressure, for an advance on the Committee's scales. If, however, after April 1, 1921, the datum figure of the cost of living reaches 170 per cent. on pre-war cost and remains there for six months, the Committee may be called together to adjust the scales to meet the abnormal economic conditions for such period as the abnormality has existed, or continues to exist, the adjustment not becoming operative before April 1, 1922.

The following are the scales recommended:—

ASSISTANT MASTERS AND MISTRESSES.

A.—Graduates.

Areas.	MASTERS.			MISTRESSES.		
	Minimum.	Annual Increment.	Maximum.	Minimum.	Annual Increment.	Maximum.
England & Wales (except London)	£ 240	£ s. d. 15 0 0	£ 500	£ 225	£ s. d. 0 0 15 0 0	£ 400
London ...	290	15 0 0	550	275	0 0 15 0 0	440

B.—Non-Graduates.

England & Wales (except London)	190	12 10 0	400	177	10 0 12 10 0	320
London...	210	12 10 0	450	197	10 0 12 10 0	360

The "London Area," both in this report and in that referring to salaries in elementary schools, is the area wholly or partly within the Metropolitan Police district. It will be a matter for agreement between authorities and teachers concerned as to whether the London scale is adopted; but, if so, it must apply to the whole of their respective areas. If no agreement is reached within six months from the date of issue of the report, the Committee will itself publish what it considers is an appropriate scale.

Owing to differing types of schools and local conditions, no scales are recommended for head masters and head mistresses. The committee simply suggest that the minima should be £600 and £500 respectively.

Certain qualifications are to be considered as equivalent to a pass degree of a university of the United Kingdom. These include: in art, the new teaching certificate of the Board, the A.R.C.A., and the Art Master's certificate in Group I plus one other group; in French, the Licence ès Lettres, the Doctorat d'Université (thesis in French), and Doctorat d'Etat ès Lettres; similar equivalent qualifications in other languages; in science, the A.R.C.S. of both London and Ireland; in music, the F.R.A.M. and the A.R.A.M. Certain other ex-

aminations, of second school examination standard, passed by non-graduates under certain conditions, and followed by a three years' full time course and examination thereon, may be held as equivalent to graduation.

Local authorities, in considering the placing of non-graduates on graduate scales, are to accept a less exacting standard for existing teachers. A non-graduate already on a local graduate scale is to remain there. Non-graduates who began teaching before April 1, 1912, who possess adequate educational qualifications, and whose service has been "meritorious," are also recommended for the graduate scale.

The above scales are basic; but certain additions are to be made to them. A good honours degree will add £25 to the minimum and £50 to the maximum of the scale. "Good honours" needs defining. A "first class" is, of course, recognized, and it is almost certain that a "second" at Oxford, Cambridge, or London will be accepted. The report states, however, that a "second" is not to be recognized unless circumstances appear to merit it. Here, in case of dispute, there is an appeal to the Reference Committee with the consent of the teachers' panel. Successful research work, or other post-graduate achievement, may be similarly recognized. One year's post-graduate training in teaching, or other similar qualifications, will add £20 to the minimum of the scale; three years' training, in the case of non-graduate teachers, will add £12. 10s., but in neither instance must the appropriate maximum be exceeded. Finally, and this in addition to any other allowances, posts of special responsibility will carry an extra £50 for men and £40 for women, added to both minimum and maximum, so long as the posts are held.

Both masters and mistresses are to be brought to their correct positions on these new scales, by the addition to their present salaries of the amounts necessary to place them at their correct positions on the appropriate scales. This is to be done by three instalments: half of this necessary amount as an increment on and from the date of the introduction of the scale, one quarter at the end of the first year, and the remaining quarter at the end of the second. The "carry over" is thus spread over a period of two years, subject to service being satisfactory.

In computing salary under the new scales, service in secondary and preparatory schools recognized as efficient by the Board of Education, service in other schools or institutions within the British Empire admitted by local authorities as of equivalent standard, and service with the Forces of the Crown during the war will be accepted. As to the rates at which service in elementary schools and other State-aided institutions under local authorities will be reckoned, the report itself should be consulted. In cases of dispute an appeal will lie, under the usual conditions, to the Reference Committee.

There are, of course, numerous points which cannot be considered here. Four matters of general interest, however, may be noted: when a teacher graduates, or is put upon a graduate scale, his or her salary will at once be increased by the difference between the minima of the graduate and non-graduate scale; no increment is to be withheld unless service for the year in question has been declared unsatisfactory, and even so the effect is, ordinarily, to be limited to one year; no scale or individual salary now in operation is to be reduced in consequence of the recommendations of the report; no authority, outside the London area, shall adopt the "London" scale without the consent of the Reference Committee.

MANY people are reading or talking about Mrs. Asquith's autobiography. Lady Gwendolen Cecil and Mr. Leonard Huxley have called in question the accuracy of her recollection, but it was thought her French was beyond cavil; yet we find her calling Sir William Harcourt *un bon viveur*. It is astonishing that Viscount Harcourt has not written protesting against this libel on his father, who may have been *un bon vivant*, but certainly never *un viveur*.

EDUCATION IN IRELAND.

THE "Irish Office" in London has sent out the following statement for publication in reference to the Report of the Intermediate Education Board, of which a summary was given in these columns last month:—

INTERMEDIATE EDUCATION IN IRELAND.

The recently published Report of the Intermediate Education Board for Ireland has drawn upon the Government a certain amount of undeserved censure for the inadequacy of the provision made to meet the urgent needs of secondary education in that country.

The financial section of the report makes melancholy reading, and it is not necessary to be an educational enthusiast to agree with the Commissioners' conclusions that the present state of Irish intermediate education demands immediate and most careful attention from the Government. It is a matter for some surprise, however, that this report, which was no doubt true at the time it was written, was allowed to be issued without correction, when measures to remedy the principal evil to which it draws attention—viz. the under-payment, and consequent shortage, of secondary teachers—had already been taken.

The Education (Ireland) Bill, which has now been before Parliament for several months and has been delayed in its passage because of the pressure upon the time of Parliament and also by the failure of the different denominational bodies in Ireland to come to an agreement as to its acceptance or amendment, represents a genuine desire on the part of the Government to place the whole educational system on a permanently satisfactory basis and, in particular, to secure that Ireland shall in future receive her full equivalent of the grants made for educational purposes in England and Wales from money provided by Parliament.

By virtue of Clause 24 (2) of the Bill, this financial provision will operate retrospectively to April 1, 1919, and will, therefore, cover three-quarters of the calendar year dealt with in the report.

The Government grant to Irish education for the year 1919-20 is calculated at £300,000, and a departmental committee has already agreed to the allotment of £64,000 of this sum for the payment of increased salaries to intermediate teachers for that year. This prospective increase being contingent on the fate of the Bill which has not yet been passed by Parliament has very properly been disregarded by the Commissioners in their statistics of teachers' emoluments, but the absence of any reference to the fact that, at the time the report was issued, an interim grant of £50,000 had already been sanctioned by the Treasury and would be immediately available for distribution, makes this part of the report unnecessarily misleading.

The explanation is, no doubt, to be found in the fact that the report, although only published on September 13, was evidently written before the beginning of July, whereas the rules for the distribution of the interim grant are dated August 3. It is desirable, however, that the correction should now be made and that the educational world should know that the interim grant, although falling considerably short of the provision made by the Bill, is sufficient to provide an average payment of slightly more than £20 for every registered teacher in Ireland.

This increase is not, and does not pretend to be, a full and equitable satisfaction of the claims of intermediate teachers in Ireland for an adequate standard of remuneration, but it affords an effectual temporary amelioration of the hardship to which they are put because of the inability of the Irish people to agree about an Irish educational system.

The new Department of Education proposed by the Bill, which will take over the powers of the existing Irish education authorities, will be staffed and maintained as a charge on the Irish Vote, and the present funds of the Intermediate Board, which have hitherto been largely absorbed by the administrative expenses of that body, will then be wholly applied as a "secondary education endowment" to the payment of capitation grants for the upkeep of secondary schools and to grants for the augmentation of the salaries paid to secondary teachers.

The total provision made by the Bill should ensure that the scale of remuneration of secondary teachers in Ireland shall in future be sufficient to attract the right class of men and to enable a high standard of professional qualification to be maintained.

Our notes clearly stated that since the Report was published an interim grant of £50,000 had been made to increase the salaries of teachers for the past year. We are not concerned here to defend the Intermediate Board, of which we have often been outspoken critics, but we cannot see that they are to blame for any censure that the Government

may have incurred in respect of the Report. The Report is introduced by a letter from the Chief Secretary's office, dated July 9, acknowledging the Report which had been sent to it on July 1. From that date the Intermediate Board ceased to have any control over the Report, which was printed and published by the Irish Government. It was late in July before any announcement was made about the new grant, and the Government could easily, if they wished, have issued a statement with the Report showing that part of the criticism which it made had been nullified by subsequent action. To an outsider it might appear that the grant was made, partly at least, on account of the scathing denunciation which the Report contained.

The Intermediate Board, however, can look after themselves. But what will the teachers think of the Government's defence? It is completely out of touch with them. Many of them have urged the Government to pass the Education Bill, but it has never even been brought forward for second reading in the House of Commons, where it might have been discussed, and the possibility of agreement on its acceptance or amendment have been discovered. What steps have the Government as a Government taken to find out whether agreement could be come to on its main principles and what amendments, if any, are necessary? Can one infer from the Government's statement whether they intend to go on with the Bill or not? But on one point all teachers will regard the statement as completely unsatisfactory and misleading. It says that "measures to remedy the underpayment and consequent shortage of secondary teachers had already been taken," and, again, "the interim grant is sufficient to provide an average payment of slightly more than £20 for every registered teacher in Ireland. This increase does not, and does not pretend to be, a full and equitable satisfaction of the claims of intermediate teachers in Ireland for an adequate standard of remuneration, but it affords an effectual temporary amelioration of the hardship to which they are put because of the inability of the Irish people to agree about an Irish educational system."

If the Government think that £20 is an effectual, even if temporary, amelioration of secondary teachers' hardships, the sooner they are undeceived the better. Will the Government observe the following facts? Their own minimum salaries under the provisions of the Duke Grant of 1918 are £160 for men, and £110 for women. The Molony Report (Appendix VI) of 1919 gives the average salaries of assistant teachers in Roman Catholic secondary schools as £131 for men and £99 for women, and in Protestant secondary schools as £171 for men and £100 for women. To these figures the Government have added in September of this year, when the summer vacation was over and the schools were reopened, an average of £20 for the year ending June 1920! The Molony Committee recommended that the initial salary should be not less than £180 rising to £450, with a pension in prospect. How do the actual salaries compare with this recommendation, and how do they compare with the recommendations of the Burnham Committee in England? It is true that the secondary schools have by great efforts increased salaries during the year, but they still remain altogether inadequate, and many schools are in consequence in serious difficulties, and some have been closed. One more question. Why have the Government agreed to an Arbitration Board for the salaries of Irish primary teachers, and why do they not do the same for secondary teachers?

SCHOOL TEACHERS SUPERANNUATION RULES.—The Board of Education propose, with the consent of the Treasury, to amend these rules as follows:—Notwithstanding anything contained in Rule 20 of the School Teachers Superannuation Rules, 1919, absence on sick leave with or without pay shall be treated as recognized service for the purpose of determining whether a death gratuity may be paid to the legal personal representatives of a teacher and for the purpose of calculating the amount of that death gratuity, but for no other purpose, provided that no such absence shall be treated as service after a teacher has been continuously absent on sick leave for twelve months.

PERSONAL PARAGRAPHS.

By the death of Mr. Arthur Sidgwick a striking personality has been removed from University life. Mr. Sidgwick entered Trinity College, Cambridge, from Rugby, in 1859, and, two years later, was elected a Scholar of his college. His many successes during his college career included the Bell Scholarship in 1860, the Porson Scholarship in 1861, the Members' Prize in 1862, 1863, and 1864, and the Senior Chancellor's Medal in 1863. A year after, finishing second in the Tripos, he was elected to a Fellowship at Trinity and returned to Rugby to take up a Mastership under Dr. Temple. His instructive and interesting methods, his thorough understanding of boy nature, and his keen sense of humour, together with his ardent spirit, aroused the enthusiasm and love of his pupils and made his Mastership one of the most memorable at Rugby. After fifteen years' service he became Classical Lecturer and Tutor at Corpus, Oxford, and shortly afterwards was elected Fellow. His lectures on the Greek tragedians attracted large audiences, and in 1894 the delegates of the Common University Fund appointed him Reader in Greek, a post which he held until his resignation in 1906. At Oxford his zeal and energy carried him into many spheres of academic activity, particularly the work of the Oxford and Cambridge Joint Board, the Local Examinations Delegacy, and the Association for the Education of Women. A deep thinker and an ardent educationist, he fought again and again in the cause of women's education, and he was equally enthusiastic in his views on the value of systematic training for secondary-school teachers. Although so fully occupied in many directions, he yet found time to write school editions of Aeschylus and Virgil, and books on Greek verse and prose composition, and at the time of his death he was probably the oldest contributor to *The Journal of Education*. A politician in addition, Mr. Sidgwick was for twenty-five years President of the Oxford City Liberal Association, and an indefatigable and undaunted supporter of his party. He was also a keen naturalist and explored many parts of Great Britain and Switzerland in the pursuit and collection of moths. His life is past: his record as a citizen and a teacher remains.

* * *

DR. O. S. SINNATT, M.C., whose appointment to the Professorship of Aeronautical Science at the R.A.F. Cadet College, Cranwell, was recently announced, is a native of Liverpool and a former student of the Manchester College of Technology and Manchester University. He has been Lecturer in Engineering at King's College, London, since 1905. During the early part of the war he was for a time in charge of the O.T.C. Training Camp at Perivale. Later he was transferred to the London Regiment and saw service in France, where he became second in command of the 2/2 Battalion. In 1917 he was severely wounded at Poelcappelle, and on returning to England was awarded the Military Cross and attached to the Air Ministry as a technical officer in the Instrument Division.

* * *

THE death of Mr. D. H. Nagel, Vice-President and Senior Tutor of Trinity College, Oxford, at the comparatively early age of fifty-seven, deprives science of an ardent teacher and the University of a most active man of affairs. Mr. Nagel was educated at Dundee Institution and Aberdeen University, and was elected to the Millard Scholarship at Trinity College, Oxford, in 1882. He was awarded the Taylorian Exhibition in German in the following year, and obtained a first class in the Final Honours School of Chemistry in 1886. Two years later he was appointed Lecturer in Chemistry and Physics, and in 1890 was elected Fellow and Science Tutor of his college. He succeeded the President as Senior Tutor and Junior Bursar in 1907, and for nearly twenty years he was mainly responsible for the laboratory which Trinity shared with Balliol. A most patient teacher, Mr. Nagel took the utmost care to make his students clearly understand their work, and he was an admirable, though kindly, critic in the laboratory. It was due to his skill and intimate knowledge of the physical as-

pects of chemistry, that the planning and supervision of the practical course in physical chemistry in 1904 was so successfully carried out. Mr. Nagel's breadth of knowledge concerning natural science, his clear perception of the relationships of the various branches of science, and his well balanced judgment were characteristics which gave him an outstanding position on all university boards and committees in the Science Faculty. He was Chairman of the Board of the Faculty of Natural Science, a leading member of the Committee for Agriculture and Forestry, and a delegate of the University Museum, and he rendered great service to the University by his endeavours to secure due co-ordination of these and other bodies. He also exerted considerable influence on school education by his work as a delegate for local examinations and school inspections, and was nominated by the Vice-Chancellor to serve on the Prime Minister's Committee on the Teaching of Natural Science. His sympathetic and unselfish nature, and his innate modesty, endeared him to the most varied types of students, and enabled him to exert a wonderful influence on university life.

THE announcement of the impending resignation of Dr. E. A. Knox, Bishop of Manchester since 1903, will be received with universal regret. The resignation is to take effect at the end of the year, and is made on the ground of permanent physical inability to discharge effectively the duties entailed by the oversight of so large and populous a diocese. Dr. Knox is now in his seventy-third year. From St. Paul's School he was elected to a scholarship at Corpus Christi College, Oxford, where he gained high honours. After holding a tutorship at Merton College for ten years, he accepted the college benefice of Kibworth Beauchamp in Leicestershire, and in 1891 took charge of the parish of Aston, Birmingham. Three years later, on Bishop Perowne's nomination, the Crown appointed him Bishop Suffragan of Coventry, and in 1903 he succeeded Bishop Moorhouse, at Manchester, on Mr. Balfour's nomination. One of the striking features of Dr. Knox's tenure of the See has been the great missions on Blackpool sands during the holiday season.

THE appointment of Mr. I. Morgan Nicholas as Director of Music for the County of Montgomery recreation scheme evidences the earnest endeavours being made towards the advancement of the education and welfare of the community throughout the Principality. Mr. Nicholas, who was trained at the Royal College of Music, has been assistant organist at the Chapel Royal, Windsor, and deputy organist to Sir Walter Parratt at St. George's Chapel, Windsor Castle.

LIVERPOOL COLLEGE has suffered a deep loss by the death of Mr. T. T. Knowles, chief mathematical master for nearly thirty years. During the greater part of his tenure Mr. Knowles acted as vice-principal of the college, and few teachers have done more for education in Liverpool. Characterized with a wonderful capacity for imparting knowledge, he spared no efforts in the interests of his pupils, many of whom are now holding high positions all over the world. With a courteous and gentle, but withal a firm, manner, he awakened the enthusiasm and love of his pupils, and his sound judgment and advice were always in great demand.

DR. J. BRETLAND FARMER, F.R.S., the well known Professor of Botany at the Imperial College of Science, has been appointed a member of the Advisory Council to the Committee of the Privy Council for Scientific and Industrial Research.

MR. S. W. BURNELL, of the Sir George Monoux Grammar School, Walthamstow, has been appointed Director of Education and Chief Executive Officer to the Walthamstow Education Authority. Mr. Burnell's early scholastic career included service as assistant master and science demonstrator under the late Plymouth School Board. In 1903 he was ap-

pointed science master at the Walthamstow Technical Institute and Secondary School, and was transferred to the Sir George Monoux Grammar School in 1916. For some years he has also held the post of Head of the Chemical Department at the Tottenham Polytechnic. During the war Mr. Burnell served with the Royal Engineers in France, and was twice wounded. He was recommended for a commission while in France, and was gazetted to the Royal Artillery in 1918. He took an active part in the early work of education in the Army, and was appointed a delegate to the Army Educational Conference in 1918.

MISS G. L. WHITAKER, Senior Mathematical and Second Mistress at Drake and Tonson's School, Keighley, has been appointed Head Mistress of Ribston Hall Secondary School, Gloucester.

ONLOOKER.

TOPICS AND EVENTS.

NORTH OF ENGLAND EDUCATION CONFERENCE.—This Conference is to be held in Sheffield in January next. The Marquis of Crewe (Chancellor of the University of Sheffield) has accepted the Presidency of the Conference. The Lord Mayor Elect (Alderman W. F. Wardley) has undertaken to give a reception at the Town Hall on the evening of January 6 to the delegates attending the conference. The opening session is to be held at the Victoria Hall on January 7, commencing at 10 o'clock, when the President of the Board of Education will give an address. The remaining sessions will be held in the afternoon and on the morning of January 8.

CADETS AT SANDHURST.—Last month 192 cadets entered the Royal Military College, Sandhurst, with the view of making the Army their permanent profession in life. The large majority—135 in all—qualified for admission by passing an open examination conducted by the Civil Service Commissioners, and the others included King's Cadets, candidates nominated by the Army Council, and ex-officers who served in the War. The successful candidates entered from no fewer than eighty-one different schools, and the marks gained in both the compulsory and the optional subjects gave evidence in the main of a standard of education above the average of former years. Another notable feature of the examination was the increased number of candidates from the smaller schools of the country, a circumstance probably not unconnected with the fact that, under recent regulations, the tuition fees payable for the sons of civilians have been reduced from £150 to £75 a year. So far as the sons of officers are concerned, the amount to be contributed continues in each instance to be dependent on the position held by the father in the Army, the Royal Navy, the permanent military forces of the Overseas Dominions and Colonies, or the Royal Air Force. But this amount has also been to some extent affected by the new regulations. In the case of a Major-General, for example, it has been increased by £5, and of a Lieutenant-Colonel or Colonel by £15.

SUMMER SCHOOLS IN KENT.—That the summer schools held this year in Kent have met the needs of the teachers in the county is amply demonstrated by the keenness manifested by the students throughout the courses. This keenness was most marked at the County Committee's Summer School held at Folkestone, where 129 students were on the roll. Nearly half of these are engaged in teaching in the schools of Kent. Others came from places as far distant as Cumberland, Northumberland, and Ireland. Special features of the school were the lectures on pedagogy given by Prof. J. J. Findlay and the demonstrations of practical activities in nursery and infant schools by Miss W. A. Bone. The students were drawn from all types of schools—elementary, secondary, and technical—and comprised heads, assistants, and teachers of special subjects. In anticipation of the demand for textbooks bearing on the work of the school in relation to handicraft, a number of books were sent down from the Committee's Central Library for teachers. The demand for certain of these books was so great that a very short limit of time had to be fixed for the retention of a volume by each student. The courses included practical activities for young children, handicraft for boys and girls, including the preparation of demonstration models, constructive and decorative needlework, art subjects, including blackboard drawing, brush drawing, and primary drawing, and village industries. There were workshops,

including a well fitted carpentry shop, and a department for metal work, having a miniature forge with continuous blast. Modelling, weaving, toy-making, &c., were taught by experts.

ROYAL VICTORIA HALL.—The Royal Victoria Hall, or "the Old Vic.," to give it the name by which it is commonly known, has reopened for the season 1920-21. As usual, the management is presenting chiefly Shakespearean plays, and opera in English. The Vic. Shakespeare Company are producing "The Winter's Tale," "King John," "King Lear," "Twelfth Night," "The Merchant of Venice," "The Taming of the Shrew," and "As You Like It." Interspersed among the plays, most of the better known operas, "Carmen," "Il Trovatore," "Tannhäuser," "Cavalleria Rusticana," "Pagliacci," "The Magic Flute," and "Lohengrin" will be sung. From our visit to "The Winter's Tale," it would appear that, if the company attains the same standard in the other Shakespearean plays, it will have achieved a notable record. The attention of teachers may be drawn to the fact that two *matinées* weekly will be given for schools. Undoubtedly this is the real method to teach the love and appreciation of our great poet-dramatist. Loathing rather than love is engendered if Shakespeare is merely studied for examinations, and too much stress cannot be laid on the importance of seeing Shakespeare's plays as a means of acquiring the power to read and enjoy his works, and of learning something of the wonderful knowledge of human nature which he displays. Three lectures are also announced for the second Tuesday of each of the remaining months of this year. During the whole of Christmas week, and at occasional performances afterwards, a nativity play by the Rev. Father Andrew, S.D.C., called "The Hope of the World," will be produced.

SPANISH AT LIVERPOOL, 1920.—An intensive course in Spanish language and literature was held at the University of Liverpool, from August 30 to September 15, 1920, under the direction of Mr. E. Allison Peers. The eighty students who attended the school were graded into Elementary (A), Higher (B), and Advanced (C) stages, and each class was subdivided for conversation. The morning's time-table comprised lessons in grammar and composition, reading and oral work. In grammar and composition, Mr. J. N. Birch, of the University of Sheffield, who took the higher students, and Mr. J. H. Spear, who took charge of Class A, gave very welcome guidance. The whole teaching of advanced students was in the hands of Spaniards—Señor Catalán, Señor Pascua, and Señor Jörissen—who had come over from Madrid for the course, and also had charge of the conversation groups. For the afternoons, lectures were arranged on a diversity of topics. There were, for example, entertaining lectures in Spanish on the life of the Spanish student; a Spaniard's impressions of England and the English; and a visit to the city of Toledo. Mr. A. E. Collyer, who is attached to the Lancashire Education Committee and has lived for many years in South America, gave two lectures on Mexico and the Mexican Revolution; while the Director and Señor Solís aroused keen interest by their courses of lectures on Calderón and Cervantes. A new feature of Spanish teaching was a short course of lectures, illustrated by a textbook, on practical Spanish phonetics. Four afternoon conferences on methods of teaching Spanish were each attended by from twenty to thirty teachers. It is probable that this Summer School of Spanish will develop considerably in future years, especially in the direction of phonetics. Already a number of classes and reading circles have been formed for the winter in connexion with it, and at least one further conference of teachers has been arranged. Spanish is now so much a part of the ordinary secondary-school curriculum that both students and teachers will probably be glad in the future to make use of the facilities which Liverpool is offering to them.

LECTURE CONCERTS.—Occasional lecture concerts, specially for schools and colleges, are being organized by Miss Clarisse Speed at the Kingsway Hall, London. The general public will also be welcome. The lecture concerts are to serve the same purpose as Shakespeare plays do at the "Old Vic." and elsewhere; they will provide suitable performances of the great works of imaginative art for young people. Only of late years has it been recognized that we should help boys and girls to acquire a liking for good music as well as for good books; that we do them a wrong if we talk much of Shakespeare and are silent on Bach and Beethoven. The first lecture concert, on November 27, is specially intended for older pupils in schools and students in training colleges and evening institutes. The "lecture" consists of informal talks to induce appreciative listening to the chamber music and solos comprising the programme. Vocal music will be supplied in the interval by the young audience, who will sing, Dr. Borland conducting, Parry's

fine setting of Blake's stanzas, "Jerusalem." Details can be obtained from Miss Speed, 25 De Quincey Road, Tottenham, N.17.

THE HEINEMANN FOUNDATION FOR LITERATURE.—Subject to a life interest of his mother and two sisters, half of the late Mr. Heinemann's residuary estate is left as a gift to the Royal Society of Literature for the establishment of a foundation or scholarship fund, to be called "The Heinemann Foundation for Literature." The purpose of this foundation is to help in the production of literary work of real value. The prize, or prizes, shall be deemed awards for actual achievements. Works in any branch of literature may be submitted for the verdict of the Royal Society of Literature, and their verdict shall be final and without appeal. Works of fiction will not be excluded from the competitions, but the judges are requested to bear in mind that the testator's intention is primarily to reward those classes of literature which are least remunerative—poetry, criticism, biography, history.

A LEADING REVIEW AND EDUCATION.—The October issue of the *Nineteenth Century and After* contains two articles of immediate interest to educational workers. Prof. Foster Watson attempts to answer the question, "Was Shakespeare ever a Schoolmaster?" and Lady Cooper discusses certain problems of elementary education. The only direct evidence Prof. Watson adduces is that of Aubrey, the antiquary, born in 1626, who states, "though, as Ben Jonson says of him [Shakespeare], he has but little Latin and less Greek, he understood Latin pretty well, for he had been, in his younger days, a schoolmaster in the country." But, since Aubrey was born ten years after Shakespeare's death, this is not very convincing. But Prof. Watson's evidence of the unexampled shortage of teachers in Shakespeare's youth has a special significance just now, when educational authorities are at their wits' end to staff their schools. Lady Cooper is greatly concerned about the religious education of school children, but we fancy that many of her fears are imaginary, and that her suggested remedies would introduce complications and jarrings which she seems unable to imagine. She makes "bold to say that as we have an army of young clergy of all denominations, they, from their special calling, are the men to be entrusted with this work. There is no valid reason why all these men under a certain age limit of thirty years old should not undertake to teach in our national schools, *not* religion, for that primarily has to be taught by example. But why not take their turn, as other teachers do, in secular subjects and the ordinary curriculum?" It is unnecessary to answer Lady Cooper's question here; but that she asks it indicates the value to be attached to any suggestions she has to make.

FOREIGN AND DOMINION NOTES.

ITALY.

The alliance between Italy and England has not yet effected that wholesome strengthening of the cultural ties between the two countries of which there was legitimate hope. Under the heading, "I rapporti culturali fra Italia e Inghilterra," an article in the *Educazione nazionale* (No. 19, 1920) indicates something of what is wanted for intellectual *rapprochement*. In Italy, the chairs of English proposed after the visit of the Italian professors to England in 1918 are vacant or inadequately filled. The teaching of English in secondary schools needs to be modernized. A great grammar of English, by Prof. Carlo Formichi, of the University of Rome, is now in the press; but, in general, the English grammars used in Italy are imperfect. Although the chief difficulty of English for Italians lies in pronunciation, the Government do not promote practical courses for them in England. As to the pursuit of Italian in England, the writer of the article recognizes the efforts of English and Scotch universities to induce it. But Italian publishers have not succeeded in maintaining a sufficient and prompt supply of Italian books for English readers. And above all to be desired is an Italian Institute in London analogous to the French Institute there, the spiritual negotiator between France and England. If Italy seeks a more intimate knowledge of the literature which Giosuè Carducci, a nice judge, pronounced to be "la più vera, la più libera, la più originale delle letterature moderne," we, on our part, having in mind old inspirations drawn from Italy, believe that that literature would be quickened, and our whole culture enriched, by a great revival of Italian studies in England. Too few now get from Italy what Milton, what Landor, what Browning got.

NOW READY. PRICE 6s.

A SECOND COURSE IN MATHEMATICS

FOR
TECHNICAL STUDENTS.

BY

P. J. HALER, M.B.E., B.Sc., A.M.I. Mech.E., A.I.E.E.,
Principal, Leyton Technical Institute, and
A. H. STUART, B.Sc., F.R.A.S., Deputy Head
Master, Day Technical School, L.C.C., Hackney Institute.

A course of work in Mathematics, suitable for the second and third year's work, on lines similar to *The First Course in Mathematics for Technical Students* by the same authors. As in *The First Course*, the atmosphere of the workshop pervades the whole book.

The book contains a very large number of practical exercises, an introduction to the Calculus, some treatment of the elements of three-dimensional geometry, tables of logarithms and of trigonometrical functions, answers to the exercises, and an index.

Descriptive leaflet post free on application.

University Tutorial Press, Ltd.,
High Street, New Oxford Street, W.C. 2.

GYLDENDAL BOOKS.

GROWTH OF THE SOIL. The Book of the Year.

9s. net. By **KNUT HAMSVN**, the great Norwegian writer.
"An absorbing story told with a marvellous simplicity."—*Times Literary Supplement*.
"A picture of infinite tenderness and humanity."—*Daily Telegraph*.
"A beautiful work of genius."—*Westminster Gazette*.

GRIM. The Story of a Pike. 6s. net.

"All the busy, restless life of ditch, river, and creek."

KITTENS. Ready shortly. 6s. net.

"No hearthrug playthings, but creatures nearer to wild Nature."

CHILD PSYCHOLOGY. I.

By **VILHELM RASMUSSEN**. 3s. 6d. net. Ready shortly. With a Preface by Prof. HARALD HØFFDING.

The soul-life of a child in its first four years.
The author, happily combining the experience and viewpoints of teacher and parent, gives in easy natural language an insight into child psychology valuable to all who care for children. A second volume, dealing with children of school age, is in preparation.

MERLIN'S ISLE.

By **W. WORSTER**. 2s. 6d. net. A Study of Rudyard Kipling's England.

"The best study of English traits which has yet appeared in print."—*Schoolmaster*.

DELPHI.

By **FREDERIK POULSEN**. 21s. net. Ready shortly. With Preface by Prof. PERCY GARDNER.

Dr. Poulsen has already a great reputation as an authority in Greek Art and its origin. The richest of archaeological fields is here surveyed, with expert elucidation of its buildings and art, as well as of Delphic Mythology.
The numerous excellent illustrations are a feature of the work.

IMPORTANT.

The Publishers beg to announce that Marshall's Edition of the GOSPEL OF ST. MATTHEW and THE ACTS OF THE APOSTLES, PART I, is now issued with the text of the REVISED VERSION. Full particulars will be sent to you upon application.

NEW PUBLICATIONS OF INTEREST.

Geometrical Drawing and its Practical Application. By A. E.

HOLBROW, A.R.I.B.A., M.S.A. Price 2s.

The chief features of this publication include, amongst others, sections on:—

Simple Problems with Practical Application—i.e., Measuring obstructed lines in the field, Angle Measuring in the open.

. **The Use of the Theodolite, The Plane Table, &c., Quadrilaterals, Areas, The Ellipse, &c., Solids and Simple Projection, and Workshop Drawings.**

The Selborne Botany for Schools. By P. J. ASHTON (Extension Lecturer to the Selborne Society). Price 2s. 3d. Illustrated with an exceptionally fine series of Photographs.

Please write for further particulars of the above publications. The Publishers feel sure that they will meet with your requirements.

GEORGE GILL AND SONS, LTD., 13 WARWICK LANE, LONDON, E.C. 4.

There is that in the air which makes for such a revival. Already in Italy the Dante celebrations are begun, and there is to be, as it is said, a whole Dante year, culminating in September, 1921, on the six-hundredth anniversary of his death-day. It were a fit time for us to woo again the speech of the poet who magically transmuted classicism and stands out still with undimmed glory as one of the world's greatest educators. Nor is it inopportune now to reflect how much of war and civil commotion was needed to make the Italian language and Dante. So does good come out of evil. A deepening of sympathy and new developments of intellectual intercourse between Italy and England would be some compensation for the recent wide disorders.

GERMANY.

In the wood of German pedagogy many birds are singing, few of them attentive to another's notes. There is no concert; they are not harmonious, but quarrelling. To speak without a figure, there is great variety of proposal and little realization in the educational world. The voice of the Left is for revolution rather than reform, and it utters itself clearly in "Die Kommunistische Schule" (Verlag "Junge Garde," Berlin, 1.50 Mk). To exhibit the opinions of German extremists, we report objectively the scheme of education set forth in the book. Who, it is asked, is *der Erziehungsberechtigte*, the person or authority entitled to educate the child? Not the parent, who is either reactionary or incompetent, but the State. And the chief instrument of education must be *work*—collective and productive work, carried on so as to induce a sense of community life and common responsibility. Capitalism is to be ousted by substituting technical universality for specialism, or the division of productive power; whilst every school, organized as a self-governing body, with a council of pupils and a council of teachers, will be a training ground of citizens. As a rule, the influence of the family will cease or be reduced to a minimum with the fourth year of a child's life; for then he will enter a *Spiselschule*, or play school, in which he may be housed and fed. At the beginning of his ninth year he enters the *Grund- or Mittelschule*. Such schools will be established in castles or public buildings, the existing primary and higher schools being swept away; their aim will be general, not special, education (*Allgemeinbildung*, not *Fachbildung*), and the physical and mental development of the scholar will be effected through manual work, gardening, and agriculture. At fourteen he passes to the *Fachschule* (special school) and the field of productive industry, with special courses accorded to various forms of aptitude. Both in the *Grund- or Mittelschule* and in the *Fachschule* board and lodging are to be provided, the family of relationship being thus eliminated and a new family of common life and aims constituted by the school community. The *Hochschule*, the crown of the whole school system (called collectively the *Einheitsschule*), will be unlike existing universities and technical colleges. In it the Faculties of Theology and Law will be abolished or merged in a Faculty of History; its function will be to supply specialized and intense training in industry, trade, agriculture, mining, and so forth, with a view to production. In general, "Alles für die Gemeinschaft durch die Gemeinschaft" (Everything for the Community through the Community) is the motto of the Communistic School.

The stress laid on material production by all German educational reformers is significant. There are those, however, who are thinking still of immaterial goods. We translate a few words from the Forty-ninth Annual Report of the Gesellschaft für Volksbildung: "We must continue to preserve and distribute the intellectual treasures of our people. We have become poor in purse, but we will educate our young so that their hearts shall not hang on the External. Free and proud shall future generations of Germany lift their heads. The inheritance of Luther, Goethe, Kant, Beethoven, and Richard Wagner remains even to the poor if they are free."

German journals are still occupying themselves with the proposals of the recent *Reichsschulkonferenz*, or Imperial School Conference, which are to govern the lines of the *Reichsschulgesetz*, the new Imperial School Law. The Committee on School Organization formulated schemes for *Berufsschulen* (vocational schools), *Fachschulen* (special schools for embryo engineers, textile manufacturers, farmers, &c.), and *Wirtschaftsschulen* (schools to train persons of from twenty to thirty-five years of age in political and social economy, law, accountancy, and general culture, for higher posts in private or the public service). At present it is all a planning of foundations, not a raising of buildings; the projects may be fitly examined when they have assumed substance. We remark already,

however, that in designing the vocational schools, which will cover the field of the present continuation schools (*Fortbildungsschulen*), the Germans avoid the blunders in the English Education Act. Thus, as to the age limit, Section 10 of our Act puts it at sixteen, raising it to eighteen only when seven years from a certain unappointed appointed day have elapsed; the German Committee fixes as a limit the end of the term preceding the completion of the eighteenth year. Section 10 imposes three hundred and twenty hours of instruction in a year, with a permitted reduction to two hundred and eighty during seven years from the same elusive day; for the Germans three hundred and twenty hours form the *minimum*. Section 10, with incredible folly, exempts at sixteen those who have been under full time instruction up to that age, whether they have profited by it or not; the Germans concede no such ground of exemption. Our Education Act will come into force—in so far as it does come into force—piecemeal and by local areas—as the Board of Education shall bid; the German law is to become operative by annual stages, beginning April 1, 1922, and to have become operative in all communities by April 1, 1930. But as yet that law has not been either drafted or debated in the *Reichstag* as the national assembly, and no national assembly is truly representative if it does not contain the selfish, the purblind, and the reactionary. The proposals of the German Committee may be mangled before they reach the Statute book. They are, nevertheless, of interest as expressing the expert opinion of Germany, which will remain a Great Power in the economic world, upon continuation—an economic question.

FRANCE.

University changes and developments are significant of the day. Japan is now a centre of interest, and at the University of Paris there has been founded a Chair of Japanese Civilization. France, eager to diffuse French culture, recognizes English culture as worth good attention; hence at Lille the Chair of Ancient History and Papyrology has been transformed into a Chair of the English Language and Civilization. From Strasbourg, if Germany was ejected, she is not to be excluded, and the university there has converted the Chair of Medieval History into a Chair of German History and Civilization. Technology grows in importance; in witness whereof, the University of Toulouse, for example, has instituted a diploma of *ingénieur électro-chimiste*. As to universities in general, the *Bulletin Administratif* (No. 2,440) of the Ministry of Public Instruction publishes a noteworthy decree relating to their constitution and organization. By this their *local* competence is fixed, the domain of each being the domain (*ressort*) of the *Académie* in which the university is situated. No university may create an establishment in the domain of another university without consent. Students will pass their examinations where they made, or at least terminated, their preparatory studies; for the migrations of incompetent candidates from academy to academy must be stayed. To keep the university in touch with local requirements, three, or in some cases four, members not belonging to the university staff will be co-opted by the University Council. Of most interest for us is the article of the decree which empowers faculties or universities to establish *Instituts* in foreign countries. We want more of these *Instituts* in England—to hallmark for us teachers of French and to further among us the sympathetic study of France and the French mind.

UNITED STATES.

A recent article in the Boston *Education* (XLI, 1) on "The New Poetry" claims, among other things, poetry for the child—the practice of it as well as the study of it. All normal children, says the author, are born poets, but only the few who are exceptionally strong-willed, or who are judiciously encouraged to follow the natural impulse, retain their birthright after they reach the school age. False standards deprive the young of the choicest blessing of life, and imagination gains no marks in the classroom. Yet American children are beginning to write verse as enthusiastically as they write prose; from them must come the spiritual vision and happiness of to-morrow. So says the Boston journal. The general statement that all children are born poets we cannot subscribe; that the school has often stunted natural faculty we believe. Justly does the American writer contend that the discipline of metrical poetry is an excellent auxiliary in the teaching of English; and, as most poets have begun as imitators, the imitation of good models in the school may enlarge the number of our poets. We add a hint from the French for practical teachers: "L'abus de l'exégèse peut enlever aux enfants le goût de la poésie."

(Continued on page 726.)

MESSRS. LONGMANS AND CO.'S LIST.

Modern Inorganic Chemistry. By J. W. MELLOR, D.Sc. With 334 Illustrations. 8vo. **12s. 6d.**

The book has been written from the modern standpoint, and, in consequence, the more recently established principles of physical chemistry have been woven with the facts generally taught in chemistry classes in Universities, Technical Institutes, and other Schools.

Introduction to Modern Inorganic Chemistry. By J. W. MELLOR, D.Sc. With 232 Illustrations. Crown 8vo. **9s.**

This book can be regarded as an abridgment of the author's "Modern Inorganic Chemistry," in a simpler dress, and it has been adapted to suit beginners in chemistry.

Higher Mathematics for Students of Chemistry and Physics. With Special Reference to Practical Work. By J. W. MELLOR, D.Sc. With Diagrams. 8vo. **21s. net.**

CAPE OF GOOD HOPE.

Like the rest of the world, the Province of the Cape of Good Hope has industrial unrest and economic difficulties to embarrass it; yet the Report of the Superintendent - General of Education (Dr. W. J. Viljoen) for the year ended December 31, 1919, shows progress achieved, continuing, and expected. If the number of schools for Europeans fell slightly, the attendance at them increased, it being the policy of the Education Department to centralize and to have fewer schools with a larger enrolment. Attendance of school is now compulsory for all children above seven and below sixteen (if they have not passed Standard VI) who live within three miles of a public school. It is proposed to abolish the three-mile limit and to provide facilities for daily transport or for boarding the children in hostels. There is strong opinion in favour of making primary education free. As to curriculum, it is hoped that primary teachers and local authorities will avail themselves more largely of the right to adapt the courses of instruction, so far as possible, to the needs of pupils and the wishes of parents. This principle of *pliancy* is recommended also to secondary schools, hitherto dominated by the matriculation examination, in which some 50 per cent. of the candidates fail, most commonly in Latin or mathematics. Leaving examinations will be instituted for those who have completed the junior and for those who have completed the full secondary school course. Instead of preparing themselves only in the matriculation subjects, the pupils in secondary schools will henceforth be free to follow instruction in music, the fine arts, commerce, manual work, and domestic science. Natural aptitude and proposed vocation will be factors in determining the course of study. It is a world-wide tendency; the doctrine of certain traditional disciplines as fittest for all is being abandoned.

Turning to the teachers, we find that the system of pupil teachers so long in vogue is abolished. In future all candidates for the primary school will attend a recognized training institution, whilst the preparation of secondary teachers will be done exclusively by the universities. In the main classes of European schools the percentage of men teachers in 1919 was 23.2, as compared with 24.2 in 1918. Salaries have been augmented. The Superintendent-General hopes

that, as the result of certain discussions and proposals, "the vexed question of teachers' emoluments will be relegated to its proper place, and the cause of education will benefit by the devotion to their legitimate duties of those upon whom primarily devolves the important and responsible task of training the State's future citizens."

An important section of the Report relates to the proceedings (iii) Education of Native Education. The Commissioners were of opinion that the general control of native education should be left with the Education Department, an officer conversant with native conditions being attached to the headquarters' staff; that an advisory council should be called triennially; that at every native school facilities for agricultural training (in the case of boys) and practical domestic economy (in the case of girls) should be provided; and that at the earliest stage the medium of instruction should be the home language of the pupil, English (or Dutch) being added and ultimately becoming a medium of instruction "in accordance with the understanding of the pupil." The Commission laid down as a guiding principle: "That the general aim of a native school should be to improve the moral, social, and economic conditions of the native people among whom it is situated."

MENTALLY DEFECTIVE AND SPECIAL SCHOOLS. — A Joint Conference of the Central Association for the care of the Mentally Defective and the National Special Schools Union will be held at the Church House, Westminster, on Thursday, Friday, and Saturday, November 25, 26, and 27, 1920. The Right Hon. H. A. L. Fisher, President of the Board of Education, has promised, subject to his Parliamentary engagements permitting, to address the opening session, when Mr. Leslie Scott, K.C., M.P., will be in the chair. On the second day, Sir William Byrne, Chairman of the Board of Control, will be in the chair and will address the Conference; and the chairman on Saturday morning will be Dr. A. E. Eichholz, Chief Medical Inspector, Board of Education. Detailed information will be available at the end of September from the Hon. Secretary, Central Association for the care of the Mentally Defective, Queen Anne's Chambers, Tothill Street, Westminster, S.W.1.

KINGSWAY HALL.

HISTORY READERS and TEXTBOOKS.

Do you want to teach your scholars History in its most fascinating form? If so, then drop the bone dry monotony of Battles and Kings as your basis and adopt the Scheme outlined below.

Send for Specimens of one of these five books by A. E. McKILLIAM, M.A., and you will surely requisition them in your next order for Readers.

Book I. TALE OF THE ANCIENT PEOPLES. 2/3. For Juniors. Stds. I & II. CONTENTS.—Tale of Euphrates Valley—The Hebrews—Nebuchadnezzar—Land of the Nile—Story of Pyramids—First Great Sailors—Story of Carthage—Cyrus the Persian—Tale of Crete—Siege of Troy—Athens and Sparta—300 Heroes—Battle of Salamis—Alexander the Great—Building Rome—Hannibal—Caesar—Pompey.

Book II. TALE OF THE NATIONS. 2/9. For Juniors. Stds. I & II. CONTENTS.—Christian Martyrs—Story of Constantine the Great—Barbarian Invaders—Fall of Roman Empire—Kingdom of the Franks—Emperor Charles the Great—How a Norman Duke conquered England—Quarrel between Popes and Emperors began—Children's Crusade—Joan of Arc—Power of Spain—Martin Luther—Wars of Religion—French Revolution—Wars of Napoleon—Russia—Story of Italy—Rise of Russia.

Book III. TALE OF THE TOWNS. 3/- Intermediate. Stds. III & IV. CONTENTS.—Old and New Stone Workers—Homes of Britons—Coming of Romans—Roman Towns and Roads—Coming of English—Homes of English—English Towns—Danish Sea Robbers—Normans' Castle Towns and Ports—How Towns became Boroughs—Town Guilds—The Black Death—Fairs and Markets—Curfew Bell—Tolls—Towns of the Middle Ages—Tithes—Spoiling of Monasteries—Pirate Ships—British Seaports—King's Customs—How Manufacturing Towns grew up—University Towns—Travelling—How Towns are Governed—London.

Book IV. TALE OF THE LAW. 3/3. For Intermediate. Stds. IV & V. CONTENTS.—Law of the Tribe—Druids—Laws of Romans—Early English—Ordeal—A Great Lawmaker—Feudal Times—Norman Law—Manors—Magna Charta—Beginning of Parliament—Statute of Labourers—Peasant Revolt—Heretics—A Tyrant King—Law of the Sea—The Pope's Rule—Laws of Queen Bess—Witchcraft—Divine Right—King and Commons—Long Parliament—Old Time Sentences—How Cromwell Ruled—Restoration—Criminal Law Courts—Poor Men's Votes—Prisons—Local Government—Parliament To-day—Laws of To-day.

Book V. TALE OF PROGRESS. 3/6. For Seniors. Stds. V & VI. CONTENTS.—Picture Writing—Age of Metals—Bards—Roman Arts—Monasteries—English Song—Beowulf—Bede—Locusts of Baltic—Alfred the Great—Sundials and Clocks—Trade in Middle Ages—Crusades—Chaucer—The Renaissance—Printing—British Foreign Trade—Old Time Medicines—Discovery of New World—First Voyage Round World—Early English Schools—Telescope—The English Bible—Spinning and Weaving—Industrial Revolution—Railways—Engineers—Abolition of Slavery—Nursing—Photography—Free Education—Electricity—Telegraph—Telephone—Newspapers—Flying—Sanitation and Surgery—Feeding Britain.

For Specimens and Prospectuses apply to—

Educational Department, Messrs. CASSELL & CO., LTD., La Belle Sauvage, E.C.4.

THE "NEW ERA" GLOBES.

These are small rubber Globes suitable for distribution round the class. Cheap, durable, and attractively coloured, they aim at supplying a long-felt want. A series is being prepared, including Globes showing Orographical Features, Political Divisions, Temperature, Rainfall, Vegetation, and Routes of Explorers. All particulars to be obtained from—

Miss E. M. WALTERS, F.R.G.S.,
71 and 84 Goldstone Villas, HOVE.

BERNON'S "SHALL AND WILL." 1s. 6d.

"... will deal a deadly blow to the terrible enemies of English Language, viz., 'I won't be able,' 'I would like,' &c.'"—AN ENGLISHMAN.

HACHETTE, 18 King William Street, Charing Cross, W.C.2.

EARLSDON, COVENTRY.

A History of England. By H. O. ARNOLD-FORSTER, M.A. Enlarged Edition. Revised to 1918 by Mrs. ARNOLD-FORSTER. With Maps and numerous Illustrations. 58th Thousand. Extra crown 8vo. net 8/6.

Also issued in Two Parts. Part I, 55 B.C. to A.D. 1603. Part II, From 1603 to the Reign of George the Fifth. Cloth boards, each net 5/-.

Stories from Ancient Rome. By Prof. A. J. CHURCH. Illustrated. Stiff paper covers, net 1/-; Limp cloth, net 1/3.

Stories from Ancient Greece. By Prof. A. J. CHURCH. Stiff paper covers, net 1/-; Limp cloth, net 1/3.

PERIODIC HISTORIES—

Things New and Old. By H. O. ARNOLD-FORSTER, M.A. An Original Series of Historical Reading Books for Schools. Profusely Illustrated. Limp cloth.

Book I. Stories from English History, from the Britons to the Battle of Agincourt. 112 pages. 2/3 net.

Book II. Stories from English History, from the Loss of France to the Reign of Queen Victoria. 128 pages. 2/3 net.

*Book III. English History, from the Romans in Britain to the Norman Conquest. 176 pages. 2/6 net.

Book IV. English History, from the Norman Conquest to the Battle of Bosworth Field. 216 pages. 2/9 net.

Book V. English History—The Tudor Period. 240 pages. 3/- net.

Book VI. English History—The Stuart Period. 248 pages. 3/- net.

*Book VII. English History—The Hanoverian Period down to November 1918. 280 pages. 3/- net.

Scholar's Companion to above * Two Books. 32 pages. Each 2d. net.

HISTORY (MODERN)—

Dramatised History. By Mrs. BASIL GOTHORP. An Entirely New and Novel Method of Teaching History—practical, interesting, simple, cheap. A series of 5 Scholar's Books. Illustrated. Stiff paper, each 4d. net; cloth limp, each 6d. net.

*Book I. 55 B.C.—1066. | Book III. Tudor Period. | Book V. Hanoverian Period.
.. II. 1066—1485. | .. IV. Stuart Period

SHAKESPEARE—For Oxford and Cambridge Locals.

LECTURE RECITALS by Mr. ADRIAN HARLEY

1920, "The Tempest," "Hamlet," "Julius Caesar," &c.

St. Cuthbert's School, Southbourne-on-Sea, Hants, July 8th, 1920.—"Dear Mr. Harley, I am very glad to write to tell you that your Lecture Recital of 'King Richard II' the other day was greatly appreciated, and that the girls who are taking it for their Certificate examination feel that it was a very helpful piece of revision for them. I hope you will come again some day. Yours very truly, MAUD FULLER."

For terms and vacant dates apply—

MR. ADRIAN HARLEY, 49 TAVISTOCK SQUARE, W.C.1.

Kensington College,

34 Bishop's Road, Paddington, W.2.

(Director:

Mr. JAMES MUNFORD, V.D., F.R.S.A., F.R.C.I.,

Opened by Her Grace Katharine Duchess of Westminster,

supplies a modern and comprehensive Training for Private Secretaries, Correspondents, Accountants, and Journalists. It confers Diplomas in Secretarial Training. Actual experience in Secretarial work and responsible office management is provided in the College Offices. A choice of appointments is guaranteed every Graduate. The College is both Day and Residential.

PROSPECTUS AND SOLICITOR-GENERAL'S SPEECH POST FREE.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

IMPORTANT NOTICE

Teachers are reminded that on the

1st JANUARY, 1921,

THE PERMANENT CONDITIONS OF REGISTRATION

will come into force. Applicants for Registration will then be required to produce evidence of Attainments, Training in Teaching, and Experience as prescribed by the Council.

Until the 31st December, 1920, however, a Teacher may apply for admission to the Register on the ground of satisfactory experience, but in the case of Teachers working in public elementary schools they must have been recognized by the Board of Education as certificated teachers before being eligible to apply. Private teachers are required to produce evidence of satisfactory attainments in addition to experience in teaching.

All qualified Teachers who are not already registered should apply at once for full particulars, and a form of application, which may be obtained from

THE SECRETARY,

**Teachers Registration Council,
47 BEDFORD SQUARE, LONDON, W.C. 1.**

BELL'S LATEST BOOKS.

THE GROUNDWORK OF MODERN GEOGRAPHY.

By ALBERT WILMORE, D.Sc., F.G.S. With numerous illustrations and diagrams. Crown 8vo. 6s. net.

[*Bell's Geographical Series.*]

This is the first volume of a new Geographical Series which Messrs. Bell are issuing under the editorship of Dr. Wilmore. The author has had in view in this book a volume which may provide, within moderate compass, an introduction to the study of geography on modern lines. It deals with Geography from the scientific point of view, and is divided into three sections: Structural, Climatic, Biological. Numerous diagrams and a carefully chosen series of illustrations accompany the text, which it is thought will be of interest not only to students but to the general public.

GENERAL CHEMISTRY FOR COLLEGES. By ALEXANDER SMITH, B.Sc., Ph.D. New Edition, entirely rewritten. Now ready. Demy 8vo. 672 pages. 10s. 6d. net.

For this edition the book has been entirely rewritten. The introduction has been improved and greatly simplified, difficult topics being transferred to later chapters. Osmotic pressure has been treated in greater detail; extensive new sections on oxidation and reduction, on various methods of writing equations, on radio-activity, and on electro-motive chemistry, have been added. Briefer new sections on atomic numbers, colloids, foods, explosives, water treatment, &c., are included, and, so far as recent advances can be apprehended and applied by first-year students, the treatment has been brought right up to date.

INTERMEDIATE CHEMISTRY. By ALEXANDER SMITH, B.Sc., Ph.D. Post 8vo. With numerous illustrations. 9s. 6d. net.

This new textbook of Chemistry is longer than the Elementary volume, and shorter than the College Chemistry by the same author. It includes a brief outline of Agricultural Chemistry. It contains, also, a discussion of Foods and their heating values, an explanation of the methods for softening water, and other practical applications of chemistry.

AN ELEMENTARY TREATISE ON DIFFERENTIAL EQUATIONS AND THEIR APPLICATIONS. By H. T. H. PIAGGIO, M.A., D.Sc., Professor of Mathematics, University College, Nottingham. Demy 8vo. 12s. net.

[*Bell's Mathematical Series.* (Advanced Section.) General Editor: W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University.]

The earlier chapters contain a simple account of ordinary and partial differential equations, suitable for those with no previous knowledge of the subject, while the later chapters cover the course for the Cambridge Mathematical Tripos, Part II, Schedule A, and the London B.Sc. Honours. The number of examples, both worked and unworked, is very large, and all the answers are given.

A FIRST COURSE IN NOMOGRAPHY. By S. BRODETSKY, M.A., B.Sc., Ph.D., Reader in Applied Mathematics, Leeds University. Demy 8vo. 10s.

[*Bell's Mathematical Series.* (Advanced Section.)]

Graphical methods of calculation are becoming of ever greater importance in theoretical and industrial science, as well as in all branches of engineering practice. Nomography is one of the most powerful of such methods, and the object of this book is to explain what nomograms are, and how they can be constructed and used. It is illustrated by sixty-four figures, most of which are actual nomograms, their construction being analysed in the text. In addition there are numerous exercises illustrative of the principles and methods.

A FIRST COURSE IN THE CALCULUS. By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, formerly Mathematics Master at Clifton College, Bristol; and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Now ready, Part I, Second Edition, 4s. Part II, 5s. Or, complete with Answers, 8s. 6d. [*Bell's Mathematical Series.*]

The first part of this First Course is devoted to the Differential Calculus with applications to Ratio, Maxima and Minima, and Geometry. The second half deals with the Differentiation and Integration of Trigonometrical Functions, the Differentiation of Products, Quotients, and Parameters, the Inverse Trigonometrical Functions, the Application of the Calculus to Approximations and Errors, Miscellaneous Methods of Integration, Applications of the Integral Calculus to Lengths of Curves and Areas of Surfaces, the Differentiation and Integration of Logarithms, Power Series, Differential Equations, &c.

THE STUDY OF WORLD-HISTORY.

By OSCAR BROWNING.

[NOTE.—The venerable Mr. Oscar Browning has long been known as a pioneer in the advocacy of the study of World-History. Hence the following paper, written some years ago but never before published, is of great interest at the present moment when, owing to the work of Mr. H. G. Wells and others, the study of World-History is becoming popular.]

I.

IN the changes which are impending in English education it is probable that the study of history will take a more important place than it has hitherto done, both in our schools and universities. It is therefore important that we should make up our minds as to what history should be learnt, and how it should be studied. What is history, and why should we study it at all? If in our daily lives we knew nothing about our family and friends, nothing that had occurred before our birth, nothing about our ancestors or the events which determine our place in the world, this ignorance would impair our usefulness at every step of our lives. What is useful or necessary for us as individuals is also desirable for us as members of society, of a state, of an empire, and as citizens of the world. The moment we begin to reflect on what is around us, we desire to know not only what things are, but how they come to be what they are—in other words, to study history. If this is true of institutions, it is also true of the country at large. We cannot read a daily paper, or even a debate in Parliament, without discovering that for the intelligent understanding of these some knowledge of history is necessary.

Gambetta once said to a French professor of history, "Vous enseignez la science mère," that is the science which is at the root of all political knowledge, and without which all government is unintelligible. This may be easily extended from the knowledge of foreign history to the history of the world. He

who knows most history will best understand the nature of those problems of which the record of the past actions of mankind holds the key. Nothing is more stimulating to the intelligence, more sobering to the mind, better calculated to produce a balanced judgment, than the contemplation of the majestic march of the centuries, as they proceed from the earliest times to our own.

It is said that in Germany every cottage contains two necessary books—a Bible and a history of the world. It is not so in England. Few histories of the world exist; and that of Messrs. Harmsworth in eight volumes is almost a solitary specimen. During the first half of the last century, the view taken of general history was too much influenced by theology. The division of the world's history into "B.C." and "A.D." seemed to imply that the birth of Christ was the most important of all events, not only in the spiritual world, but in the world of action. Hence an undue importance was given to the history of the Jews, a comparatively unimportant people, whose destinies have always been controlled by nations more powerful than themselves. The central point of the history of the world is not the birth of Christ, but the establishment of the Roman Empire, which was contemporaneous with it. "Imperante Augusto natus est Christus, imperante Tiberio crucifixus." The establishment of the Empire makes a deep cleft in the fortunes of the human race, and at the same time bridges over the chasm. Into the Roman Empire all ancient history falls, and from it all modern history flows. Until Englishmen were familiar with this view of things the history of the world could not be properly studied by them.

An education which was purely classical gave undue importance to the histories of Greece and Rome, or rather to the portions of these histories recorded by Thucydides and Herodotus on the one hand, and by Livy on the other. Tacitus was entirely neglected. Greek history was limited to an account of the Persian and Peloponnesian Wars, and to the relations between Athens and Macedon drawn from the speeches of Demosthenes; whereas in Livy we followed blindly the narrative of the seven kings of Rome with Romulus, Numa, and Servius Tullius, who probably never existed at all. The recollection of the supremacy of Rome still dominated the world, but the world never seemed to care how the Roman Empire came into existence, or by what means it consolidated and maintained its power. Even now, the Government of the Roman Empire—which so strongly resembles our own, and from which we have many lessons to learn—has never been made properly known to us. The famous work of Grotius on "The Law of Peace and War" draws its examples almost exclusively from the three sources I have mentioned—the Greek, the Roman, and the Jewish. Anything which these three nations had done, or were supposed to have done, was regarded as a fixed and immutable law, to remain ever afterwards as a pattern or a warning to mankind. Nor was the manner of the teaching more reasonable than the subject taught.

Jewish history was imparted by questions and answers elaborately learnt by heart out of badly printed books bound in redolent sheepskin; Greek and Roman histories were taught out of handbooks, unintelligently studied by the pupil, whom the teacher afterwards put through the torture of unintelligent questions. Any idea of pointing out the comparative importance of the facts and their relations to each other was never thought of. Our Eton atlases were infected with the same vice of exaggerating the importance of the ancient as compared with the modern world. Ancient maps were alone drawn; ancient geography alone taught. Modern geography was imparted only by "references" as they were called, that is by writing down on the margin of our maps the modern names which were supposed to correspond with the ancient. If an important modern town had not existed in ancient times, it was left out altogether, and no attention was paid to the fact, now patent to every student, that the ancient and modern towns are seldom on the same site and that the so-called "modern name" is often a misnomer. With us the modern name of Tusculum was always Frascati. When I was a master at Eton, and was appointed to teach history to the elder

boys, my taste and conviction naturally led me to the teaching of modern history, and I chose the reign of George III as one in which the germs of our most recent development could be most profitably traced. This did not meet with the approval of the head master, who denounced the eighteenth century as an "arm-chair study," enervating to the character and corrupting to the mind. "Give the boys something hard to think about, something which will exercise their reasoning faculties, something of a manly complexion, for instance, the Feudal System." "If I had studied the history of George III as a boy," he added as a clencher, "I should never have been here now." I refrained from making the obvious rejoinder: "How much better it would have been if you had studied it."

The merit of history is that it begins nowhere or rather that it begins everywhere. It does not matter where you make a start. You can read anything in which you are interested, a biography, an account of a movement, and from that you can proceed backwards or forwards. Indeed it is not a bad way to read all history backwards, passing from the known to the unknown. Many persons are choked off from the study of history at an early stage from the dullness of the beginning.

The first chapter of any complete history is seldom interesting, origins are imperfectly known and much is left to conjecture: it is better to plunge into the middle. I have been told that Mr. Lecky, the historian, as a boy was very fond of reading, and that he generally began a new book from the second volume and worked back to the first after he had aroused his interest in the subject. Some persons are most interested in battles, some in institutions, some in men. To these last the biography of a great man, such as Frederick the Great, Peter the Great, or Napoleon, will stimulate where nothing else would have the effect. As a boy at Eton I was terribly bored by Blunt's "History of the Reformation," which I had to get up for a holiday task, and a kindly governess wrote me out an abstract of it. But for myself I studied Gibbon with ardour, not only his history but his diaries, his biography, and his miscellaneous works generally. He was a pagod of my youth, and I made a pilgrimage to Beriton, near Petersfield, to see the house in which he and his father lived. Even now I would recommend the reading of Gibbon as the foundation of historical study before anything else, but no abstract must be used, nor the little book falsely called the "Student's Gibbon." It is important to get through the whole series of volumes, eight or twelve as they may be. It is a great advantage in life not to be afraid of a big book.

I never considered a pupil of mine at Eton properly educated unless he had read Gibbon straight through before he had left school, and I urge everyone who is intending to study history to lay that broad and strong foundation. "The History of the Decline and Fall of the Roman Empire" is a great work of art. It rises majestic and harmonious as a Grecian temple. It is one of those inestimable boons which the eighteenth century gave us, the flower of culture before it was burnt up by the French Revolution. At that time France led the intellect of Europe and she may perhaps lead it again. The style is dignified and attractive, the epigrams are piquant and can never be forgotten, the pageant of the centuries passes before you: you see the Roman Empire at its highest point, and then trace how it changes like a dissolving view into the condition of things from which our modern institutions have arisen. It is the golden bridge between the past and the present. But more than that, it is a masterpiece of literature, and he who has the tenacity of purpose to peruse it will not weary with any similar task again. Some chapters are used as textbooks throughout the world, such as that on the institutions of the Byzantine Empire and that on the fabric of the Roman Law. These are unrivalled examples of vivid and intelligent condensation. Gibbon is not so happy when he deals with religion. He was not much of a believer, and the weapon of "grave and temperate irony" which he borrowed from Pascal was too tempting not to be used. He was apt to treat all heresy as amusing, and all religious enthusiasm as a psychological eccentricity. No saint, not even Mohammed, stirs him to sympathy.

The methods usually employed for teaching history to students who are no longer boys may be divided into two classes. One of these I should call the antiquarian method, although some would call it the scientific; the other would certainly be designated as the political method. The antiquarian method aims at discovering the facts of history by what is called "research" or sometimes "original research." An historian thus trained would have learnt a large number of historical facts, which he believes to be scientifically true. Suppose that he wishes to study Frederick Barbarossa, one of the outstanding personalities of all history, he would be told that the authorities for his life are to be found in one or two medieval chronicles, written in language which it is difficult for him to understand. These are to be studied carefully and diligently compared with each other, their agreement and differences being minutely noted. He will be told that when he has done this he will have become an historical scholar, and that he will possess a knowledge of Barbarossa which will put any ordinary person to shame.

The politically trained historian will proceed on a different plan: he will obtain his knowledge of Barbarossa from some first-rate historical work in a modern language. He will endeavour to know him as a man, to conceive an enthusiasm for him, to recognize his position in the history of the world, and to realize why he is so important. This student will have conceived a passion for his subject, and possibly make Barbarossa the study of his life. The other is more likely to acquire a disgust for him, and perhaps for the study of history altogether, and seek some other subject more closely connected with the affairs of modern life. I have seen these results occur more than once in my long experience as a university teacher.

To study history profitably, we should give importance not so much to the facts as to the relations between the facts. We should recognize that some facts of history are not important at all, and that they are all of very unequal importance. There are some periods in the history of the world, as there are in the history of a nation, or in the life of an individual, when the organism is either resting from an effort or gathering strength for another effort. It is false to assert that these grey and lifeless periods are as well worth our attention as those which glow with colour and animation. If we cannot learn the whole of history, let us learn those parts which most deserve attention, those epochs which most resemble our own times and from which we have most to learn. Perhaps in science nothing should be neglected; the dregs of our crucibles may supply us with a new element, the invention of a toy may revolutionize the commerce of the world. A result of this nature cannot be expected from history, and it is waste of time to look for it.

History is, after all, connected with persons, and an important person leaves traces behind him. Caesar, the family name of the greatest man who ever lived, as a title of sovereignty has dominated both the East and the West. Kaiser and Czar have been watchwords in the history of the world. The political historian will regard all his knowledge from the point of view of action. He will never forget that history is past politics, and politics present history. If he studies the personalities of Pericles or Charles the Great—and they are personalities which are worth studying—his mind will be constantly in touch with the present. Pericles was a great parliamentary leader, comparable to Chatham, to Pitt, to Gladstone. But how did he succeed in "swaying at will that fierce democracy," when all posts at Athens, except that of General, were filled by lot, and no Athenian could be a member of the Upper and more important of the two Chambers unless he were chosen by lot, and then only twice in his lifetime? Charles the Great was a civilizing influence in the midst of anarchy and barbarism. When we study his wars and his legislation, we should compare him with other statesmen, whom, perhaps, we know better: with Napoleon, who reduced to order the chaos left by the French Revolution; with Cavour, who welded the discordant provinces of Italy into a whole; with Bismarck, who erected a German Empire on a new basis. We shall thus acquire the "statesman mind," the most valu-

able quality of the human intellect, and train ourselves to act as statesmen in whatever position our lot may be cast. We shall learn this, not from the study of ancient chronicles or "original documents," but from the habit of looking at historical facts from the political point of view, and considering how events came about, how they worked, and what permanence they possessed. It is idle to say that Hildebrand was not one of the greatest of Popes, because we have little documentary evidence of what he did. We know the fact; if the evidence does not lie ready at our hands, it is for us to discover it. Any dull man can research, but it takes brains to be an historian. Similarly, if we study institutions, we shall not be curious to track out every wheel and oil-pot in the machine. We shall not trouble ourselves if some newly found inscription contains the name of some obscure official now mentioned for the first time. But, taking the best authorities available to us (and there will always be authorities, if not in English, in some European language, which will give us the latest information), we shall then study the institution as part of a working machine, and constantly ask ourselves, how did this act and how would it act now? what analogies are there in the institutions of which we have personal knowledge? I would be bold to say that if you come to the conclusion that this institution could not have worked, and that such an arrangement was impossible in any state of society, just make up your mind that your authorities are probably wrong, and that the institutions about which you find a difficulty never existed. Erudition is often the enemy of knowledge. From erudition we learn about a thing, but not necessarily the thing itself. Frequently the trees prevent us from seeing the wood.

Believe me, the most important facts of the world's history are all known; leave it to experts to add to them and to alter them. Begin studying the records you possess from the best authorities; learn them, meditate upon them, read them for instruction as well as for amusement, translate them into the language of everyday life, and you will find that the study of history is not only the most fascinating of all studies, but that it makes you every day a better citizen and a better man. Therefore, if you study history, study it for itself, and not with the idea that you are to grub in ancient documents or learn the laws of historical evidence. There are few portions of history which cannot teach you something of importance to your daily life, or which are impotent to strengthen and elevate your character.

(To be continued.)

THE "INITIATION" SCHOOL.

By R. W. FERGUSON,
Educational Organizer to the Bournville Works,
Birmingham.

THE title suggests mystery: the school itself is simple in conception and straightforward in aim. It is a small effort made on behalf of boys and girls of fourteen who have just left school and come to a factory. It is quite an experiment—probably rather crude—but those who have carried it out think that there are distinct possibilities for good in the idea. Perhaps a better name would be "Works Preparatory School." First impressions count for much. This is peculiarly true of the boy or girl entering a large factory or business house for the first time as a unit—a potential producer or distributor.

For some time now most large employers have taken on their new juniors chiefly at three fixed dates in the year—usually about January, Easter, and August or September. Suppose a firm engages, say, fifty new boys from the local elementary schools at the end of the summer term. After a short holiday the factory is ready to absorb the boys—perhaps by the middle of August. Now comes the preparatory or "initiation" school.

The boys are divided into classes, fifteen or twenty in each, and for a week or ten days, or even longer, they

follow a time-table built up like that of a small secondary school. While one class is having a lesson on, perhaps, "wages" or "works rules," another class may be studying the plan of the factory, and a third may be making an illustrative visit to the baths, the dining-room, or the surgery. Then one class may spend most of the afternoon on a tour of the works, while the second set writes up notes of yesterday's visit, and the third set has organized games or physical exercises, followed by spray baths. Later they all meet together for a lantern or kinematograph lecture on the raw materials coming into the factory, or on some of the chief processes carried on, or on the recreative and social side of things. So the work continues from day to day, reminding one a little of the first week of term in a rather new secondary school.

Short syllabuses have to be devised for a school of this kind, and in some cases names must be invented for the subjects. The following are examples:—"Order," "Safety," "Institutions," "Dining-room Arrangements," "Education in a Factory," "Cleanliness," "Health," "Care of Teeth," "Power," and so on. Wherever possible the lessons or talks are supplemented by illustrative visits, or demonstrations, or practical work. To boys the visits to engines and boilers make a strong appeal, while an imaginary picture of what would happen if power were cut off shows—even to a young mind—how interdependent all sections of workers really are. There are numerous periods for writing and discussing.

With few modifications the same arrangements are applicable to girls: they can learn the construction of working overalls, while the boys are measuring up one or two factory buildings and making simple sketch plans thereof.

The school ends all too soon, and the following week the boy or girl is actually placed in both works department and continuation-school class, taking up the two-fold life which is to last for nearly four years. Surely the child begins his life with a clearer and broader outlook than would have been possible without the "Initiation" School. The boys prove their interest by the enormous number and variety of questions asked, while the girls show in their essays on "My First Week in the Factory" that they, too, have grasped the idea wonderfully well.

The school is held in, or close to, the factory (a sports pavilion, or club, answers fairly well); the teachers are drawn from among the works officials; the hours are a compromise between elementary-school hours and factory hours; and a full week's wage is paid to each child for the time spent in the school.

A modern factory should not be merely a place of production; it is often a complex and many-sided social unit, with innumerable opportunities for recreation, mental and physical self-development, and the cultivation of citizenship. It may even claim to have some *esprit de corps* of its own. It is this higher aspect of factory life that those who conduct Initiation Schools hope to bring specially before the boys and girls who pass through the schools before taking their places in the ranks of the industrial army.

The school serves another purpose. Most juniors in large factories are engaged on simple operations of a repetitive character, and they frequently fail to understand where and how their little job fits into the general scheme of things. In the Initiation School the story of what goes on in the factory can be simply told and the various processes made reasonably clear by pictures and by samples of products partially or completely manufactured. The tour of the works and the various visits help to complete the image in the mind of the boy or girl. The school aims at being, *inter alia*, a creator of impressions.

Of course, the critic may urge that this is vocational education and, as such, is unsuitable for children of fourteen. The answer is two-fold. First, the Initiation School merely takes the place of a corresponding time spent in the factory, and in no way interferes with the continuation school. Secondly, surely nothing could better comply with what the Scottish Education Act (1918) requires in Section 15 (4) (b), namely, "special instruction conducive to the

efficiency of young persons in the employment in which they are engaged or propose to be engaged." And the Scottish Act compares quite favourably with the English Act passed a few months earlier, especially in its provisions for the education and general welfare of those between the ages of fourteen and eighteen.

GEOMETRY IN THE MATHEMATICAL SYLLABUS.

By R. NETTELL,

Royal Naval College, Osborne, I.W.

IN the present mood of reconstruction it seems likely that the teaching of geometry will once more come under discussion. With so many modern subjects demanding inclusion in the school curriculum no subject will be allowed to keep its place unless it can show just cause for so doing. Hitherto, the position of mathematics has been unassailed, and the conflict has been waged chiefly between classics and science. But the time has come when it is necessary for the mathematicians to put their house in order, and to examine carefully each item of their subject, with an eye to pruning and cutting off all superfluous growth.

It is inevitable that, with the passage of time, each subject should tend to include in its syllabus certain details that are somewhat in the nature of parasitic growth, possessing little real educational value. Such details have often crept in by the way of examination papers or exercises from some textbook. From time to time pruning becomes highly desirable. It checks waste and strengthens true growth, no less in the world of education than in that of the garden.

During the last twenty years many changes have been adopted in the teaching of geometry. The pendulum has swung now in one direction, and now in another. At the present moment mathematical teachers appear to be hovering between two minds, whether to throw all rigid proofs to the winds, and make the subject merely an acquirement of geometrical ideas, or to go back to something of the nature of the old formal geometry. On the whole, outside pressure seems to be leading us towards the former course.

Geometry, it is said, did not teach us logic, or, at any rate, it did not make us more logical in other spheres of thought. We realize that the logic of Euclid's proofs did not appeal to us as boys; nor did the soundness or weakness, as we have since learnt to call it, of his demonstrations and deductions build up in us habits of clear reasoning. We have found that rarely, if ever, are the problems of life so clearly stated that we can definitely say this is entirely right, and that is entirely wrong. Side issues are ever forcing their attention on us, and hiding the main theme. And because we have found such little use for that which we so laboriously and painfully acquired we gladly accept the gospel of the modernist, and join with him in casting down the system which had stood for over 2,000 years. For good or for ill, Euclid, as we knew it, has gone from our schools, and there are many to make merry over our freedom from its yoke. But let us see to it that in its place we build something better, something firmer, and of greater value in the training of the youth of our land. Yet there are some of us who would utter a word of warning, lest, in the hurry to give clear ideas by shortened and easy methods, we lose the power of grappling with difficulties that the older methods, when properly used, undoubtedly gave. "Easy come, easy go," is as applicable to the acquirement of true knowledge as to that of wealth.

In cutting adrift from the restrictions of rigid geometry let us not lose sight of the golden opportunities that deductive geometrical reasoning affords for the acquirement of sound habits of thought. To follow, and to be able to reproduce, a series of geometrical deductions in the form of formal propositions doubtless has its value in the examination room; but it is of little use outside. And, if our teach-

ing of geometry produces only this, then may we set ourselves down as failures in our profession.

Let us not be led astray by popular clamour for results that are immediately visible. Rather let us aim at something far harder of attainment, and far more elusive than any examination success. To demonstrate geometry, so that our pupils may both understand and assimilate it, is essential, if our teaching is to be worth anything at all. Ideas must be both given and encouraged to grow into definite form, and facts must be memorized, either by sheer effort of memory or by their constant use. But this is only the beginning, the mere elements of our work. The real value of geometry, apart from its practical use to engineers and men of science, is still to be found in the training that it affords in simple logical reasoning. In seeking that training by merely studying and reproducing Euclid's propositions, we were dropping the substance and laying hold of the shadow. Instead of following the spirit of Greek culture, we allowed ourselves to be satisfied with a mere imitation of it. To train our pupils to reproduce geometrical proofs certainly has an educational value, but of far greater worth is the training which produces habits of orderly thought, and of careful examination of "data." Such training will tend to check the rash jumping to conclusions unwarranted by our premises, which is so prevalent in these days of economic and industrial strife.

This it is that the study of geometry is able to give when freed from the fetters of fetish worship, for here we deal with a science, where the premises of an argument can be stated with an exactness and a simplicity which it is impossible to find in other domains of thought. There are no prejudices, no human weaknesses or desires to disguise the issue. The mind is left free and untrammelled to pursue its reasoning by a series of deductions, each in itself so clear that the process of thought can be studied and made apparent.

It should be the aim of every teacher to give his pupils, above all else, an insight into this mechanism of the mind at work, and to lead them bit by bit to use it with a full consciousness of what they are doing.

It is possible that other subjects of study may some day be found that can offer an equally suitable or better field for work of this description; but there is no evidence that that time has yet arrived. Until some such subject is discovered let us see to it that we do not lightly cast away, as of little worth, that which we now hold. But let us be under no delusion as to the danger that threatens. If we claim the retention of geometry as an important subject in the school curriculum on the grounds of the value, educational or otherwise, of a series of propositions in their true logical sequence, then a cutting down of the school time now allowed us will inevitably follow, and the blame will be entirely on our own shoulders. What then, briefly, should be the openly professed aim of our teaching of geometry? Surely, it should be this:—

(1) To impart a knowledge of some, though not necessarily many, of the properties of the most common figures of both plane and solid geometry. In other words, to give that "geometrical sense" which is becoming more and more necessary to everyone in this age of mechanical transport and household mechanism.

(2) To build up in our pupils sound habits of well-ordered thought, of precision, and of profound respect for the premises of an argument.

A REFRESHER COURSE, designed to meet the requirements for advanced instruction under the Education Act, has been arranged by the Kent Education Committee for certificated teachers of senior classes in elementary schools. The course will be held at Goldsmiths' College, and will run from November 16 to December 14. There will be about twenty-four places, and it is proposed to allot half to men and half to women. The Committee will give boarding allowances according to circumstances, and dinner at the college each day will also be paid for by the Committee. In the case of teachers living at home, daily travelling expenses will be allowed.

CORRESPONDENCE.

THE SCIENCE OF EDUCATION.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Sir Robert Blair, in his presidential address to the Educational Science Section of the British Association, urged teachers to show that their art is a science, and promised as an additional inducement, an ancillary reward, that when this is accomplished the public will allow teachers the moral, social, and economic status which it already accords to other professions.

This statement of Sir Robert undoubtedly supposes that the moral, social, and economic status of a general medical practitioner—one of Sir Robert's chosen examples—is due to the fact that medicine is a well developed, firmly established science, and that a general practitioner bases his everyday work on the fundamental principles of this science in which he is thoroughly versed, and the public, which appreciates and venerates science so thoroughly, accords the general practitioner a status and a fee which it refuses to a teacher whose work is not based on scientific principles, which the public would so readily recognize and reward.

This is surely a travesty of the true facts. The real science of medicine is not more than fifty years old, and it is very doubtful whether the status and emoluments of a general practitioner have improved so wonderfully since medicine has been established on a firmer scientific basis. It is doubtful also whether a general practitioner knows very much about the principles of his science. Sir Clifford Allbutt, in an article in the Jubilee number of *Nature*, bemoans "practitioners faithless of theoretical principles—just Philistines." A general practitioner is still largely an empiricist out of touch with the principles of his science, and his moral, social, and economic status is accorded to him because he belongs to a body which is strong enough to enforce its demands. If teachers desire above everything a position comparable to that of the general medical practitioner, they will never achieve it by wasting their energy on establishing a science of education, but rather by forming an association similar to the wonderfully close corporation which has achieved this for a doctor.

Sir Robert Blair considers that a well developed science of education can be established. This may be true, but the formation of such a science, the elucidation of its principles, and their application in practice is a singularly difficult problem. A science is founded on observation or experiment, or on both, but those sciences in which experiment can only play a minor part show a state of relative uncertainty and backward development, while the sciences which depend mainly on experiment show a rapid development and attain a position of relative certainty. Real experiments are almost impossible in education, for the object of an experiment is to vary the conditions, and the control in a really successful experiment must be such that only one condition is varied at a time. If two vary, the effect, if any, cannot be definitely assigned to either, it may be due to one or the other or both jointly, and if there is no effect it is impossible to conclude that either is indifferent, for one may have neutralized the other. Education deals with living things, and to control the conditions so that only one varies at the same time is quite impossible, so that observation must play a major part in establishing the principles and fundamental laws of educational science, which will consequently develop slowly and never attain a position of more than relative uncertainty.

Sir Robert mentions experimental tests which have made such rapid progress in recent years, but are these tests truly experimental? An observation does not become an experiment when an instrument is used, an astronomer is not experimenting when he looks at the moon through a telescope, a boy in a science laboratory is not doing an experiment when he measures density, and is a psychologist experimenting simply because he uses an instrument to make a measurement? Experiments in education are rarely more than observations, and even as an observational science education presents a serious difficulty, for in many observations time enters largely as a factor. Great caution and much patience are necessary in such a case, if the observer's conclusion is to be just and capable of verification.

It may be considered that this restricts the meaning of the word experiment in a way which cannot be justified, but the argument is that only those sciences which are truly experimental in this sense are well developed and are founded on fundamental principles which are relatively certain.

To establish a science of education is an aim worthy of the most serious consideration by all those who practise the art, and a great deal can and ought to be accomplished by sustained effort, but when some of the principles are established the work of the teacher in applying them in his practice is much more difficult than in

another science which is founded mainly on experiment. It is comparatively easy for one skilled chemist to repeat the work of another, or to launch a new piece of work founded on the well-known principles of the science, for the chemist can control the conditions, temperature, pressure, concentration, and so forth, which affect the work; but it is almost impossible for a teacher to do so, and it seems quite possible for two men applying the fundamental principles in their practice to arrive at two very different results, as the conditions are almost entirely beyond control.

Agriculture and education seem much more comparable than education and medicine. Scientific agriculture is based mainly on the sciences of chemistry, physics, and botany. The way in which these sciences can be applied to agriculture has been worked out in laboratories and on experimental farms by experts in the three sciences, and a soil can be treated in such a way as to fit it to produce the best crop of that plant which is most suited to its nature. A farmer seeking to apply those principles may select the soil most suitable for wheat production, prepare the soil by treating it with the manure required to supply any deficient factors for the growth of the wheat, use only tested seed, and yet, in spite of all his precautions, he cannot guarantee a crop, for some important conditions are beyond his control. The wind bloweth where it listeth, the rains descend and the floods come, and the farmer's best efforts are set at naught. Scientific education must be based on other sciences, psychology and physiology among them, but can it ever attain the relative certainty which obtains in agriculture founded on such sciences as chemistry and physics?

The task of the teacher is even more difficult than that of the farmer who can select his soil, but the conditions beyond control often foil the best efforts of both.—Yours, &c.,

A PHILISTINE.

TEACHERS REGISTRATION COUNCIL.

To the Editors of The Journal of Education and School World.

SIRS,—I am directed by the Teachers Registration Council to seek your help in making known to recent applicants for admission to the Official Register the fact that, whereas in March the total number of applicants was 35,000, by the end of September this number had risen to 65,358.

Those concerned will probably recognize that this large increase in the number of applicants involves some delay in the issue of certificates, and, while every effort is being made to overtake the arrears, it is necessary to observe the greatest care in scrutinizing the applications and in preparing the necessary documents.

Those who are still waiting for their Certificates of Registration are asked to accept this explanation, with the assurance that the matter is being pushed forward as rapidly as possible.—I am, Sirs, yours faithfully,

47 Bedford Square, London, W.C. 1.

October 12, 1920.

FRANK ROSCOE,

Secretary.

UNIVERSITIES AND SCHOOLS.

OXFORD.

On October 7, the University, with all due formality, took what is certainly the most momentous step which this generation has seen by admitting women to its membership. At present there are 625 women students in residence against 549 in the Michaelmas term last year, but there is little doubt that these numbers will be greatly increased in the near future. Education, in its various forms, will demand a much larger number of women teachers than it has required in the past; and in view of the attractions presented by the two "Burnham" reports, and the Superannuation Act, it will almost certainly obtain them. As to their influence upon the institutions and tone of a university whose traditions are so deeply rooted in the past, it is impossible yet even to attempt to make a forecast; it is certain that that influence will be considerable.

The Royal Commission on the Universities of Oxford and Cambridge, sitting under the presidency of Mr. Asquith, has recently been taking evidence at Oxford. It has dealt with university finance with special relation to developments since the war; with the work of the University Extension Delagacy and of the tutorial classes; with the co-ordination of teaching generally; and with the teaching of modern languages and of natural science, particularly with reference to physics. It also visited the Ashmo-

lean Museum, inspecting some of its collections, and also the chemical laboratories at Queen's and Jesus Colleges.

Many students, through an insufficient knowledge of Greek at their entrance to the University, do not take Literae Humaniores. It is proposed that for such a final honour school in philosophy, politics, and economics should be established. Pass Moderations and the numerous examinations precedent to Responsions must be altered in view of the new regulations by which Greek will be no longer compulsory. These and other matters will need the attention of Congregation.

BIRMINGHAM.

The authorities of the University of Birmingham find that there is a greatly increased demand for university education in the Midlands; yet at the same time they are themselves faced with a debt of £130,000, the interest on which reduces their income by nearly £9,000 a year. In spite of this, they are being absolutely forced to spend £15,000 on temporary laboratories, though the remuneration of their staff is most inadequate, very much lower than that at Manchester or at Liverpool. They therefore appeal for £500,000. This amount is urgently needed for building and equipment, for enlarging and improving the stipends of the staffs, and, generally, for increasing the accommodation for students, particularly necessary in Birmingham, where, applied science being a principal feature in university activity, the proportion of laboratory work is higher than it is in the older universities. It is to be hoped that there will be a ready response, for, in the main, Birmingham is a poor man's University; roughly, the fees received from its pupils do not amount to more than one-third of their cost to the University. Birmingham has at least its share of wealthy men; surely some of these will do their part in placing the finances on a sound footing, and so enable the University to meet the strain which the growing needs of education is throwing upon it.

WALES.

The special meeting of the Central Welsh Board, held at Llandrindod Wells, unanimously agreed to issue a circular letter to the counties appealing to them to make voluntary contributions towards the deficit of £5,000 on the current expenditure of the Board. It will be remembered that a special deputation waited upon the Chancellor of the Exchequer to urge upon him the necessity of increasing the annual grant of £1,200, which was the sum fixed by the Treasury as far back as 1904. But the subsequent increase in the cost of examinations and the great extension of the work of the Board in recent years have thrown a great strain on the Board's resources, and at present they are totally inadequate to meet their requirements. Their activities are in danger of being seriously hampered, to the detriment of secondary education in Wales. For some reason or other, however, the Chancellor could not see his way clear to increase the annual grant, but he stated that, if the counties would voluntarily increase their contributions, one-half of the extra contributions would be returned to them under the deficiency grant. At the special meeting it was resolved to act upon this suggestion, and it is to be hoped that the appeal will be strongly supported. At present each county is statutorily compelled to pay to the Central Welsh Board 22½ per cent. of the proceeds of a 4d. rate, and it was recommended that an equitable distribution of the extra burden would be effected if this percentage were uniformly raised for each county, say, to 35 per cent. The sum involved for each county is trivial, ranging from about £80 for one of the smaller counties to £1,100 for Glamorgan. The success of the appeal is, however, a matter of urgent and vital importance to the future of the intermediate schools, and therefore we trust that it will be generally supported.

At the annual meeting of the Court of Governors of the University College, Cardiff, Principal A. H. Trow stated that the number of regular students was 1,043, as against 970 last year. The College was therefore assured of a great future. Their problem was how to secure for Welsh students full and complete university education without excluding desirable students from outside Wales. The average cost per student was £50 per annum, of which about £16 per student was contributed by the parent. The remainder was met by endowments, rate and State aid. The normal development of the College depended upon adequate finance, and the Council were therefore considering the advisability of launching an appeal for £250,000 to meet the more urgent demands, for, as the grants from the 1d. rate and the equivalent Government grant were not available for building purposes, all extensions of premises must be met by special contributions. Provided this appeal was liberally responded to, South Wales could, almost at once, possess a really

great university college. Another reason for improving the finances of the College was the crying need of raising the salaries of the staff. The College was continually losing the services of its best men as they were able to secure better paid posts elsewhere, which was a serious hindrance to the full development of the work and the efficiency of the College.

The new University College at Swansea has opened its first session with a satisfactory number of students. It is at present seriously handicapped by the lack of proper equipment and suitable premises, but no doubt the deficiencies in this respect will be made good before long. The number of students in attendance in the technological and science departments is about seventy. The extramural work has already begun. Mr. Ernest Hughes has inaugurated a course of lectures in history on "The Growth of Freedom in the Eighteenth Century," and Dr. A. E. Truman is delivering a course of lectures on geology. It is also proposed to erect temporary premises in Singleton to accommodate the Arts Section next October, so that in a comparatively short time the College will be in a position to supply a complete university course.

At the University College, Bangor, Mr. Ivor Williams has been promoted from a lectureship in Welsh to the post of professor of Welsh literature, and Mr. T. Shankland, the librarian, to a readership in modern Welsh history. The College has also appointed Mr. Manistone, from Bristol, as lecturer in physics, and Mr. Carr as lecturer in the day training department. It was also announced at the last meeting of the Council that the sum of £10,000 had been presented by Mr. T. Owen, of New Brighton, towards the establishment of a chair of electrical engineering and hydro-electrics. As there is abundant water-power in North Wales, there should be ample scope for the new department, and it should become a popular and useful addition to the strength of the College.

One of the most important features of recent Welsh educational history is the growth of interest in the cultivation of music in the schools and colleges.

Music.

Wales possesses abundant material for the establishment of an excellent national school of music, but hitherto but little has been done to systematize the teaching, or to direct the activities of the different localities. Our energy was largely misdirected and wasted. However, it is obvious that Wales is at last thoroughly alive to the importance of giving this important subject an honourable position in the curriculum of both schools and colleges, and different educational authorities have recently taken steps towards ensuring that music will have fair play. Special interest, therefore, is attached to the first annual report of the Council of Music, which is a record of substantial work. The Council was brought into existence as the result of a private benefaction of £1,000 for five years, and Dr. Walford Davies was appointed as musical director. From December, 1919, to June, 1920, eighty lecture concerts were given by the staff, and the report testifies to the keen appreciation of their efforts by school audiences. It is also proposed to issue a hymn and tune book for the use of schools and colleges. These are only a few of the directions in which the Council is seeking to guide the public taste, and we have no doubt that before long Wales will occupy a far more worthy position than it does at present among the nations, as the result of this vigorous campaign. Another indication of the growth of interest in musical education is the appointment by Bangor College of Mr. E. T. Davies, of Merthyr Tydfil, as director and organizer of music in the college.

Sir Harry Reichel has just issued in a pamphlet form his address delivered to the Cardiff Society of Cymmrodorion last January. The address is a useful historical summary of the discussions which preceded the foundation of the University, and it is remarkable how closely the present University of Wales has followed the lines laid down by Sir Harry thirty-four years ago in an address before the Liverpool Welsh National Society. The growth of the Welsh University has been amazing, and its effect on Welsh life but little short of revolutionary. To realize this to the full, we have only to compare the Wales of to-day with that of fifty years ago. But the next half century will probably see a further and no less far-reaching change; but to form a just idea of this change it is necessary to consider the position and function of a University in a modern state. Its function is: first, to train, and secondly, the extension of the boundaries of knowledge. Comparisons are drawn between the American, German, Italian, and French systems, and he strongly advocates the retention of the faculties of general and professional studies side by side in the same university, as in England and America. Divorce them and each will suffer. Sir Harry also discusses at length the relation of the university to the State, and apparently he seems to prefer our system under which lay and academic elements are in constant and living touch with each other, though it is imperative that each should recognize that the presence and co-operation of the

other are essential. It differs from the American practice, which is bureaucracy pure and simple, while our older universities are governed solely by the academic expert. The whole address should be read carefully, as it is an important contribution to the understanding of the problem of university education generally, and in Wales in particular.

We deeply regret to record the death of Mr. F. E. Battersby, the head master of Newport Intermediate School, after a short illness. He was a mathematical scholar of Queens' College, Cambridge, and graduated as Senior Optime in 1894. From 1896 to 1905 he was senior mathematical master at Newport, and in the latter year was appointed as head master in succession to Mr. T. W. Phillips, who is an inspector of schools. Mr. Battersby mainly confined his activities to the school, and did not take a prominent part in public educational discussion. He was a teacher and organizer of great ability, and he had impressed his personality strongly on his pupils.

Personal.

At a recent conference, held at Bridgend, in connexion with the East Glamorgan Women's Section of the Labour Movement, a member of the Glamorgan Education Committee, Mr. John Evans, of Maesteg, in support of his opinion that a "certain snobbishness" exists in our secondary schools, seems to have relied on some highly fallacious statistics. According to a report in the *Schoolmaster*, he is made responsible for the statement "that out of 79,368 children who attended the elementary schools in a typical year, only (sic) 55,722 passed to the intermediate schools." How these figures are obtained the report does not enlighten us, but that they are obviously wrong is easily shown by reference to the reports of the chief education official and of the Central Welsh Board. According to the former, the total number present in each year between the ages of twelve and sixteen is approximately 17,500, which is equivalent, roughly, to 70,000 for whom post-primary education must be supplied under the Fisher Act. Out of this total, at present (according to the latest available statistics of the Central Welsh Board) only 4,078 attend the intermediate schools—that is, just under 6 per cent. of the children. If we include the numbers in attendance at the secondary schools, the percentage will, of course, be slightly, but not materially, improved. Glamorgan is therefore clearly far removed from that ideal state of things when 55,000 out of 79,000 will enjoy the advantages of secondary education; and we are therefore driven to the conclusion that either Mr. Evans has been misreported or that he has somehow blundered seriously in the manipulation of his statistics. His charge of "snobbishness" is also almost as ridiculous as the figures to which we have referred. It is based entirely on his own imagination, for not the slightest distinction exists between the fee-paying and non-fee-paying pupils in a secondary school, because, as anyone who is acquainted with the internal working of a secondary school knows, as a rule neither the staff nor the pupils are aware to which category a pupil belongs, for they are not labelled in any way. It is also a sufficient reply to the charge to state that 4,784 pupils out of a total of 5,257 in Glamorgan had previously been educated in a primary school before entering an intermediate school in 1918-19—figures which prove the democratic character of the latter and the impossibility of maintaining an atmosphere of snobbishness in them. The cause of free education, at all events in Wales, will have to be supported by more cogent and relevant arguments than Mr. Evans has used.

"Snobbishness in Schools."

The Rev. Herbert Morgan, the well known Baptist Minister of Bristol, has been appointed director of extramural studies at the University College of Wales, Aberystwyth, and Mr. D. Evans to a lectureship in German. Mr. G. J. Walker, Birmingham, has also been elected as academic secretary to the college.

Appointments.

Popular indignation against the rise of rates of all kinds has become unduly concentrated against the education rates during the last two or three months. In all parts of the country there is a murmuring with regard to the financial burdens imposed by the Education Act, often accompanied by an unreasoning denunciation of the Act and a yearning for a return to the happy days of the school boards. This was the feeling that animated a meeting, representing 273 parish councils, which was held in Glasgow at the end of September. The parish councils have nothing to do with education, but on them rests the duty of collecting the education rates; and they do not like the job. The meeting passed a

resolution calling on the Government to repeal the Act or take other steps "to redress the evils arising through the provisions of this wartime legislation which was forced through Parliament at a time when the mind of the nation was directed in very different channels." In ordinary circumstances this might have been taken to be simply a blowing-off of steam. But the presence of Sir George Younger, the Coalition Whip, who ingenuously confessed that members of Parliament had no idea of the effect of the Act on rating at the time it was passed, raises questions regarding the possibilities of Government action. It would be all to the good if the Government were to hurry forward its scheme of rating reform. There are undoubtedly some grievous anomalies in the present system of rating, and it is not good to have ignorant people denouncing education and educational administration when the real cause of complaint is bad financial arrangements.

Rating Reform. The critics of the Education Act generally assume that the evils of which they complain come with the Act. But that is an obvious mistake. It is not the costs of administration or of free books or of building which have raised the demands of the education authorities on the rate-payers, but the strictly limited increases in teachers' salaries. These increases were inevitable, whatever the governing body. Nor is there any truth in the view that the difficulties of rural rating are the result of the Act. The Act made the unit of rating the county instead of the parish, and the basis on which rates are estimated is valuation. On this system some parishes contribute much more to county education than is spent on the scholars inside their own boundaries. But if rates were estimated on population instead of valuation these parishes would be rated more lightly, and the anomalies would break out elsewhere. The position is further complicated by deductions on agricultural subjects, which vary in effect from parish to parish. Sir Henry Keith, the chairman of the Lanarkshire Authority, who speaks with unrivalled knowledge on this difficult question, advocates as an immediate remedy the levying of the rates on gross valuation and the repeal of the Agricultural Rates Act, and as an ultimate remedy to make income the basis of rating.

Highland Education. In pleasant contrast to the rather unreasonable criticisms of the Education Act on the part of the parish councils is the testimony borne to the beneficial influence of the Act on Highland education, in the Gaelic Mod held in Oban. The president, the Rev. George W. McKay, of Killin, dwelt at length on the stimulus it had given to the use of Gaelic as a medium of instruction in Gaelic-speaking districts. There were, he said, three points in the great Scottish Education Act of 1918 which were of special interest and value to them as Gaels. First, there was the larger and more spacious area; second, the national scale of salaries; and third, the Gaelic clause. The county area meant more freedom and scope for the Gaelic-speaking teacher, a better chance of promotion, and a better outlook in every way. The national scale secured a more satisfactory sphere of work and ambition in the Highlands, and helped to retain the best Gaelic-speaking men at home there, thus avoiding the necessity of bringing non-Gaelic-speaking teachers from the south. It is to be hoped that the Highlanders will keep these undoubted facts in mind the next time their lairds and ministers begin to denounce the Act.

The Salary Policy of the Educational Institute. The main interest of the annual general meeting of the Institute this year was the evident struggle between the two groups of teachers, who regard each other as "reactionary" and "revolutionary," respectively. So far as one could judge, the honours were pretty evenly divided. On the question as to the use to be made of the Professional Fund, the decision went in favour of those who think that the Fund should not be reserved for strike purposes, but should be spent in other special ways for professional organization. But on salary policy the other party scored. The official motion, approved by the Council, was to the effect that the Institute's representatives on the Joint Council should negotiate on the basis of the best scheme of salaries in operation in Scotland for the purpose of arriving at a new minimum scale. This was rejected, however, in favour of a more aggressive motion, moved by Mr. Hugh B. Guthrie, instructing its representatives to place before the Joint Council as a minimum national scale these figures: for recognized teachers, £250 by £20 to £500; for Chapter V teachers, £300 by £20 to £500. To this was appended the further instruction that no offer of a modified scale is to be accepted until it has been placed before the delegates at a special general meeting. This finding has created a good deal of misgiving in certain sections of the profession. Some teachers object to it because of its equalization implications. Others fear it because it appears to them to be part of a considered policy leading ultimately to a strike for higher salaries. The general opinion in moderate circles seems to be that the Institute, by asking too much

and asking it in an uncompromising way, is likely to get nothing. As the Joint Council meets at an early date the matter will be put to a speedy issue.

The New President of the Institute. Dr. William Boyd, the lecturer on Education in Glasgow University, who took office at the annual meeting as president of the Institute for the coming year, is the first university representative to fill the post since Prof. John Young, also of Glasgow University, was president in 1892. Dr. Boyd has been in charge of the Education department of his University since 1907, and has played a conspicuous part in various forms of educational work in and around Glasgow during that time. He was president of the Glasgow branch of the Institute for two years and took an active part in the deliberations of the Education Reform Committee. He is probably best known to teachers by the books and articles he has published on a wide range of educational subjects.

Educational Research. For the last three months an interesting series of articles from Dr. Boyd's pen has been appearing in the *Scottish Educational Journal*, under the title "Fixing a Standard in Composition at the Qualifying Stage." In these articles are given the first results of the Institute's Committee on Educational Research, which has been busy at work under his direction during the past year. Teachers were invited to help by getting their qualifying pupils to write essays on certain subjects under prescribed conditions. With their co-operation over four thousand papers were got as a basis of inquiry. Selections from these have been printed in the *Educational Journal* on two occasions, and teachers have been invited to mark in order to help in fixing objective standards. By means of this collective estimate a standard scale has been evolved, showing the quality and kind of composition which the usual mark names ought to connote. Following on an annotated series of essays, Dr. Boyd has discussed the problem of eliminating variability in the marking of compositions from various points of view. It is expected that a similar report on the standardization of marking in arithmetic will appear at a later time. The Research Committee of the Institute and its convener are to be congratulated on the very promising beginning they have made. They are doing good work for the profession.

The Emigration of Teachers from Scotland. It is pointed out by a leading Scottish newspaper, in the course of a weighty article on the Scottish universities, that from forty to fifty of their rising teachers have been called to England and abroad in the last two years, and insistence is properly laid on the need for improvement in the remuneration and status of the lecturers, on whom the major part of university teaching now depends, to prevent this depletion. The same difficulty is not unlikely to arise in regard to the younger section of the teaching staffs in the schools. There has already been a small exodus southwards, and with the attraction of the larger salary scales now offered in England the number of emigrants may soon be considerable. If the authorities wait for the increase in equivalent grant that will come with growing expenditure on English education before facing the problem, they may find the supply of teachers seriously short, whatever salaries they offer.

IRELAND.

Secondary Education. Comment of a different character from our remarks on page 719 of this issue has been made in *The Times* on the Report of the Intermediate Education Board by Prof. Ridgeway, pointing out the deplorable state of Irish secondary education, and its still more gloomy outlook. He quotes the following letter which he has received from one of the chief American authorities on racial questions:—"From an anthropological point of view, I am greatly interested in the constantly increasing evidence of the extremely low intellectual status of the native Irish. The statistics collected by the United States Government during the war, of tests made to determine the intellectual status of recruits, show the Scotch, English, and Americans at the head of the list. Then follow the other various foreigners that we have here, and at the very bottom—scarcely above the negro in intellect—come the Irish. The figures proved almost too much, because the Irish were not handicapped by the lack of knowledge of our language, as were many of the other foreigners who stood higher in the test. As an Irishman, I felt bitterly the great disadvantage under which many of my fellow-countrymen labour who settle in the United States, whilst I fear that the same holds true for others of them who go to Australia and our other Colonies. As I know well that they do not lack intellectual ability, their low standard in the United States statistics can only be ascribed to the miserable character of the present Irish educational system."

MASTERSHIPS.

UNION OF SOUTH AFRICA.

BREBNER SCHOOL, BLOEMFONTEIN.

Wanted, an ASSISTANT MASTER for the Brebner School, Bloemfontein, Orange Free State, South Africa, to commence duties 19th January, 1921. Must be an Associate of the Royal College of Science, London, on the Engineering side, or a Bachelor of Science in Engineering of some recognized University; hold the Board of Education Parchment Certificate, England, or the Privy Council Certificate of Scotland, or a University Diploma in Education, or an equivalent Certificate.

He will be required to teach Mathematics and General Science in the day school, and Machine Design Construction and Drawing and the allied subjects, especially Mechanical Engineering and Mechanics, in the evening classes.

Experience in teaching essential. Salary £360 per annum, rising by annual increments of £20 per annum to £540 per annum, plus War Bonus, which at present for a married man is £122 per annum, plus about £120 per annum for evening class work.

If the successful applicant is prepared to enter into an agreement on his arrival in South Africa, to serve the Administration of the Orange Free State Province for a term of not less than three years, a refund of his passage money to Cape Town at First Class Intermediate (B3 or B4), or Second Class Mail (D1) rate will be granted, on production of the usual receipts. A free railway warrant for First Class Ticket from Cape Town to Bloemfontein, and a warrant for 200 lb. excess luggage, will be supplied.

Applications, in duplicate, stating age, academic and professional qualifications and length of teaching experience, with subjects taught, must reach the SECRETARY, Office of the High Commissioner for the Union of South Africa, 32 Victoria Street, London, S.W.1, not later than 15th November, 1920.

GRADUATE in English Honours, required at Cambridge, to prepare students by correspondence for London University Examinations. £265 to £300. Apply—ENGLISH, c/o University Book Co., 48 Southampton Row, London, W.C.1.

Posts Vacant—continued.

NEWPORT (MON.) EDUCATION COMMITTEE.

MUNICIPAL SECONDARY SCHOOL FOR BOYS. Head Master: Mr. D. W. OATES, M.A.

An ASSISTANT MASTER will be required to commence duties in the above School at an early date. Candidates must be Graduates of a British University or possess equivalent qualifications. Preference will be given to candidates holding an honours degree in English. Salary according to experience and qualifications, the scale being now under consideration. Applications, accompanied by copies of three recent testimonials, should be forwarded to the undersigned.

T. ARTHUR EAVES.

Secretary and Executive Officer.

Education Offices, Charles St.
19th October, 1920.

NORTHALLERTON

GRAMMAR SCHOOL.—Wanted, in January next, a MASTER (Graduate) for Geography and Mathematics. Initial salary from £180 to £250 according to qualifications and experience, rising by annual increments of £15 to £440 or £450. Apply—HEAD MASTER.

COUNTY HIGH SCHOOL,

ILFORD.—Applications are invited for the following appointment:—MASTER, to be responsible for Geographical work throughout the School. Graduate. Commencing salary £220 to £300, according to experience and qualifications, maximum £400. Applications to be made on forms to be obtained by sending stamped addressed foolscap envelope to the CLERK TO THE GOVERNORS.

HEADSHIPS.

CAPE COLONY.—Wanted, HEAD

MISTRESS for GEORGE Diocesan School, 40 to 50 girls. Degree and experience. Churchwoman. Subjects preferred, French and Latin. Climate good, temperature moderate. Initial salary £300 resident. Passage paid. Agreement 3 years. —JOINT AGENCY, 8 Oakley House, Bloomsbury Street, London, W.C.1.

Posts Vacant—continued.

NEWPORT (MON.) EDUCATION COMMITTEE.

HIGH SCHOOL FOR BOYS.

APPOINTMENT OF HEAD MASTER.

Applications are invited for the post of HEAD MASTER of the High School for Boys. Candidates must be graduates of a University in the United Kingdom or have such other equivalent qualifications as may be approved by the Board of Education. Actual teaching experience in a Secondary School is essential. The commencing salary is £600 per annum, but both the minimum and the maximum salaries will be adjusted on the publication of the Report of the Burnham Committee.

Applications, stating age, qualifications, training, and experience, and accompanied by copies only of three recent testimonials to be sent to the undersigned not later than Saturday, the 13th November, 1920.

Canvassing, either directly or indirectly, is prohibited and will disqualify.

T. ARTHUR EAVES.

Secretary and Executive Officer.

Education Offices,
Charles Street,
Newport, Mon.
19th October, 1920.

CASTERTON SCHOOL

For Daughters of the Clergy and others.

THE Governors are about to appoint

a HEAD MISTRESS for the above school; must have degree, or its equivalent, of a University in the United Kingdom. Age under 40. Salary £500-£650. Duties to begin after Easter vacation. Completed applications must be sent in on or before November 8th.

Forms of application and further particulars may be obtained from Canon BURTON, Casterton, Kirkby Lonsdale.

NEW ZEALAND.—Wanted, in

1921, HEAD MISTRESS for a large and growing Presbyterian Girls' School, Secondary, with Preparatory Department. Day and boarding. New buildings to be erected shortly in larger grounds. Present numbers about 300. Degree essential. Age 30 to 40. Salary £500 with board and residence. Saloon passage. Apply—Miss WHITEHEAD, Wycombe Abbey, Bucks, for further particulars.

The salaries of the primary teachers are in a fair way to be settled upon a satisfactory basis. The Irish National Teachers' Organization has been negotiating with the Commissioners of National Education and the Treasury officials with the object of fixing a permanent salary scale, and, in default of agreement, the question is to be referred to the Conciliation and Arbitration Board, which will then fix the scale. It thus seems more than likely that one great source of dissatisfaction in Irish education will be removed.

The following new Commissioners of the National Board have been appointed:—Rev. W. G. Strahan, Rev. W. H. Smyth, and Sir Andrew Beattie. The Resident Commissioner, in place of Dr. Starkie, has not yet been appointed.

The Department of Agriculture and Technical Instruction for Ireland has issued notice of examinations to be held next Easter for teachers' qualifications in experimental science and domestic economy. The examinations are intended primarily for teachers engaged in teaching in day secondary schools. Applicants must be over twenty-one years of age on April 1 next. The examination will be in two parts, written and practical, and will be held on Saturday, April 2. Application for admission to the examination must be made before February 28.

PRIMARY SCHOOL NOTES.

The Second Burnham Report.

Two factors tend to make somewhat arduous the task of the Teachers' Panel in securing the endorsement of the second Burnham Report by the constituent members of the National Union of Teachers. The first is that the main principles of the report have already been adopted in advance by local authorities, particularly in reference to the third and fourth scales, and, in view of the great increase of the cost of living since these new scales were adopted, they are already insufficient to meet existing economic calls. Whether the proposed sliding scale will prove a satisfactory expedient for meeting this difficulty remains to be seen. The second factor lies in the direct conflict of policy between the National Union of Teachers, which has committed itself to the principle of a national uniform scale, and the Burnham proposals which lay down varying rates of payment for different areas. It is true that the zonal arrangement will encourage the migration of teachers from one district to another; and to this extent it lays down an educationally sound principle. On the other hand, there is no guarantee that the lowest paid areas will secure any adequate teaching supply, and there is the prospect of the country areas becoming mere recruiting grounds from which local education authorities having more attractive salary scales may secure their school staffs.

The Conflict of Opinion.

ANY prospect of a settlement of the salary controversy will be carefully examined by all teachers. The Burnham proposals will make an exceptionally strong appeal to those teachers who have had an appreciable period of school service, and it is in the hands of these members that the hope of acceptance lies. Those who are approaching the pensionable age are desirous of obtaining maximum salaries in the shortest time, in order that a bearable superannuation period may be secured. The influence of the older teachers may be expected to exercise a restraining effect upon their younger colleagues who cannot anticipate the same immediate benefit from the new scales. On the other hand, the position is now different from that which confronted the profession when the Provisional Minimum Scale was being considered. This was a national scale and appealed to the professional spirit of many who were opposed to it. Despite the progress made in the campaign for the equal payment of men and women teachers, the latter gave overwhelming support to the first Burnham report at the London Conference last December. Whether they will do so again is uncertain. The new association of schoolmasters is advocating a scale considerably in excess of the Union Scale, and it is unlikely that they will support the new proposals. Teachers in rural and semi-rural districts who were enthusiastic in supporting the Provisional Minimum Scale, are now rallying strongly to the Union principle of a single national scale. Since the representative conference fixed for the 6th inst. follows closely the issue of the report the local associations will have little time to grasp any but the main principles set forth in it, or to organize any concerted action in opposition to it. Consequently the spokesmen of the Teachers' Panel will occupy a strong position in the debate. While there is

a general feeling that the proposals will be approved, it is clear that all the elements of a vigorous and interesting discussion exist. It is notable that the spirit of unity has often saved the position when times of crisis have been met by the National Union of Teachers.

The Universities and the Training of Teachers.

THE magnificent service rendered to the nation during the war by the universities has been a prime factor in influencing the renaissance in education which followed its close. In the enthusiasm shown by the universities in providing the training which will enable teachers to develop the movement lies the hope of still greater service in the future. On all sides there is evidence of the keenness of local education authorities to co-operate with the universities in securing adequate supplies of competent teachers. The development of degree courses for teachers by the affiliation of residential training colleges with the local universities, the provision of special courses for teachers intending to take service in the new central and continuation schools, and the rapid development of vacation courses, are all tendencies which show the vitality of the movement. The question is now being seriously discussed as to the possibility of providing degree courses for teachers by means of evening and Saturday morning classes. Such courses would involve the repetition of lectures given in the day-time, but with support from the education authorities, and the known eagerness of the teachers, there is every prospect that well graduated schemes spread over suitable intervals of time would prove successful. In any case they would establish the living contact with students which constitutes the living force of every university, and for thousands of teachers they would abolish the fearful strain which is imposed by private preparation for external degrees. From the financial point of view the introduction of such courses would be beneficial to the universities, since the ordinary fees would be payable by the students.

Vacation Courses as Teaching Qualifications.

THE suggestion has been made that formal recognition should be given by university authorities to satisfactory study and attendance at approved vacation courses. The Board of Education and many local education authorities already appreciate the benefit to education which follows from the attendance of teachers at these courses; and it appears to be clear that the vacation course will play an important part in equipping teachers for the responsibilities imposed by the new Education Act. In numerous cases the work done at vacation courses is comparable with sessional work for university degrees with regard to attendance at lectures, classes in practical work, and the general standard of attainment. Under such safeguards it is conceivable that recognition by the universities would secure (1) a vast field for university extension movements of a high standard, (2) a promising supply of well qualified teachers, (3) a sensible easing of the existing strain upon the ordinary accommodation of our universities. Attendance at a certain number of vacation courses is allowed to count in Scotland as a qualification for secondary school teaching, the higher scale of salaries being paid in such cases. The existing position seems to be one which lends itself favourably to experiment by the universities.

National Federation of Class Teachers.

THE Annual Conference of the National Federation of Class Teachers at Ipswich was welcomed by the Mayor and other civic authorities. Mr. O'Neill, of Leicester, gave a presidential address, exceptional in brevity and clarity. In discussing the causes of the insufficient supply of teachers, he emphasized the fact that, while 80 per cent. of the teachers must remain permanently as class teachers, those who are fortunate enough to secure promotion as head teachers obtain rates of remuneration and prospects of professional improvement little superior to those of class teachers. The closing of administrative posts and the inspectorate to teachers, the forcing of codes, schemes, and regulations upon the schools without regard to the opinion of teachers, the insuperable obstacles placed in the way of developing individual ideals, the prevalence of large classes, and the imposition of methods advocated by enthusiasts who have no practical conception of ordinary school conditions, were all quoted as factors detrimental to the attractiveness of teaching as a profession. Point was made of the increased cost of living in nullifying the beneficial effect of the Burnham scale. Mr. O'Neill condemned the dual system; many of the non-provided schools were unfit for their purpose and the religious bodies were unable to find the money for repairing them. Simple Biblical instruction was sufficient for all the day

schools. Mr. J. T. Kerr, of Newcastle, was elected vice-president; Mr. W. B. Steer, of Derby, and Mr. J. H. Lumby, of Liverpool, were re-elected treasurer and secretary, respectively. A significant feature of the elections to the Council was the defeat of Mr. G. H. Powell, vice-president of the N.U.T., while Miss Wood, president of the N.U.T., who was elected to represent Lancashire, secured only slightly more than half the votes of her colleague, Miss Aston, of Liverpool. This is in accordance with the tradition of the Federation in taking an independent course during the annual elections.

PRIZE COMPETITIONS.

THE prize for the October competition is awarded to "Homunculus"; *proxime accessit* "Tartuffe."

The winner of the September competition is Miss C. A. Ford, 5 Branch Hill Side, Hampstead, N.W. 3.

By "HOMUNCULUS."

SLANDER.

Let us proceed still further. The crowning point in the meanness of this vice is that, not content with courting favour and posing as the amiable censor, it even claims to be honest and charitable and well-meaning. Here we have one of the commonest of abuses. Let me draw your attention to it, and embark with you on a scrutiny of your morals, since it is true of this sin what St. Augustine said of heresy, that the best way to combat it is to expose it. Here, I say, is one of the abuses of our time. Men have contrived to sanctify slander and to make a virtue of it, and that one of the most sacred virtues—namely, zeal for the glory of God; that is to say, they contrive to rend and blacken their neighbour's character, not from hatred or in a fit of passion, but in the name of piety and in the interests of God. "We must humble these good people," they say; "it is for the good of the Church to blast their reputation and damage their credit." Once that is established as a principle, it becomes a point of conscience, and anything is regarded as permissible with as lofty a motive. They invent, they exaggerate, they poison men's minds, they tell only half the truth; they put forward their own prejudices as undeniable truths, they retail a hundred falsehoods, they generalize from a single instance; the evil word of one they blaze abroad, the good deeds of the many they keep to themselves; and all this, I repeat, "for the glory of God"! The end, in their eyes, justifies all. It would not suffice to justify an equivocation, but it is more than sufficient to justify a calumny, for one who is convinced that it springs from the service of God!

The sentence, "*Ce qu'un a mal dit . . . personne*," proved a difficult fence, and only twenty-six of the competitors succeeded in clearing it. So far as the grammar is concerned, *on le fait dire à tous* might certainly mean "one causes it to be repeated to everybody," but this is only a half thrust; the slanderer does not "cause to be repeated," but "repeats" himself. The real meaning is, "the evil thing said by one is attributed to all, while the good thing that many have said is attributed to none." We hesitated long before awarding the prize to a version which contained this mistake, but finally we came to the conclusion that no other version was nearer perfection. Besides, the prize version has got more of the mingled simplicity, strength, and terseness of Bourdaloue than any of its rivals. Yet we should have liked "trying to please" instead of "courting favour," "enter upon" instead of "embark on," and "these people" instead of "these good people." *Il y va du service de Dieu* is "the service of God is concerned." *On se fait une conscience* is rightly translated; the phrase, "to make a conscience of," is used with the same meaning in Elizabethan and seventeenth-century English. As one of the competitors pointed out, it is a technical term in moral theology. *Faire connaître* is more than "to make known," *connaître* meaning "to know about a thing," not simply "to know that it exists."

The passage is clearly directed against Pascal's attack upon the Jesuits in his "Lettres Provinciales."

We classify the 87 versions received as follows:—

Class I.—(a) Homunculus, Tartuffe, Fiasco, Bésigue, V.N., Arambol, J.S., Dane, Ecoutons, Sylvia, B.T.

(b) *Esse quam videri*, Woodlea, Calvus, Garnet, Almora, Spion Cop, Acacia, Swastika, Menevia, Matheson, Bohe-mond, Tom, Agricola, Fortiter, M.G.L., Hesperus, Viatrix, K.M., Cormur, G.N., Sarnia, Thersites, Un jour viendra, Van, Gurkha, Sirach, Haworth, Leander, T.S.

Class II.—Tregorrick, Didyme, Tiny, Fifi, Gil Blas, Pom, Babylonia, Rosemary, Gryndasael, Julius, M.L.D., Amor, M.T.E., Septimus, C.L.C., Ray, Cassandra, Augustus, Ivy, Buffalo, Espérance, Borealis, N.B., Mrs. Gilbey, E.S.W., Anglaise, Tony, Mineur de Charbon, Grenouille, Rex, Scout.

Class III.—March, Hibernia, Jerome, Jumbo, Lehted, Rival, O.E., Siaeyol, Veritas, Portia, Arab, Fleur-de-lis, Benjie, Swanee, A.A.M., Elaine.

A Prize of Two Guineas is offered for the best translation of the following extract from Henri Bordeaux' "Le Pays Natal":—

Mme Mérens réclamait des détails sur la réunion publique. Le comte, pris d'un accès de toux, dut laisser la parole à Lucien.

Le candidat parle du haut d'une terrasse qui domine la grande place de Thônes. Il vibre consciencieusement. Des femmes pleurent, des vieillards hochent la tête avec de petits rires admiratifs, et des jeunes gens ont sur le visage le sourire figé du bonheur. Les mots de justice, de liberté et de fraternité montent dans l'air du soir qui est limpide et sonore. Les auditeurs sont fascinés. Voilà.

—Vous écoutez, dit la bonne dame, pour faire plaisir à Annie.

Alors, je reprends. Imaginez la foule, cinq cents personnes, des hommes en blouse ou en bras de chemise, des femmes aux fichus clairs des jours de fête, massés à l'ombre sous de grands platanes. Devant eux, au soleil, la terrasse d'où l'orateur, en pleine lumière, lance sa harangue. Voulez-vous une idée de l'éloquence du candidat? Il faisait très chaud. Le soleil tapait sur le crâne de Jacques. Un brave paysan le remarqua, chercha une chaise, se hissa dessus et se mit en devoir d'abriter notre ami sous un vaste parapluie rouge. Mais Jacques est un orateur d'action. Le pauvre bonhomme faisait des efforts désespérés pour suivre ses mouvements et promener sur ses évolutions la tente improvisée; il remuait la chaise avec frénésie. Le candidat se démenait, le paysan gesticulait, et le parapluie décrivait en l'air des courbes savantes. Eh bien, personne n'a remarqué ce tableau, qui était rustique et familier plus encore que grandiose.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on November 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C.4.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS.—The Ninth Annual Conference of Educational Associations will be held in London from December 29, 1920, to January 8, 1921. The inaugural address will be given by the Right Hon. H. A. L. Fisher, Minister of Education, and the president of the conference, Lord Burnham, will be in the chair. This meeting will take place at Bedford College for Women, Regent's Park. All the other meetings will be held at University College, Gower Street, London. There are now forty-five separate associations affiliated to the conference, and there are indications that there will be over sixty meetings which members of all these associations will have the privilege of attending. The Clothworkers' Company are lending their hall for a *soirée*, to be held on the evening of January 3, and the Incorporated Society of Musicians will provide a musical entertainment on the occasion. M. Jaques-Dalcroze will give a demonstration of eurhythmics in Queen's Hall on the evening of January 7. Two joint conferences will be held on each Saturday morning: one on "The Use of Psychoanalysis in Education," and the other on "How best can a feeling of Professional Solidarity be created and maintained among Teachers?"

THE GRANDEUR THAT WAS ROME

New Edition

By J. C. STOBART. Profusely illustrated. Uniform (each 21s. net) with the same Author's **THE GLORY THAT WAS GREECE**

"Probably as successful attempts to teach 'historical perspective' as have ever been made."—Sir ROBERT BLAIR.

THE DAFFODIL POETRY BOOK

Compiled by ETHEL L. FOWLER, B.A. Cloth, 3s. 6d. net. Wrappers, 2s. net.

A School Poetry Book for junior classes containing 108 poems by 57 authors, including 25 living poets.

Mr. WILLIAM CANTON writes: "A singularly fresh and attractive little anthology, pleasant to handle and delightful to the eye."

POEMS OF TO-DAY

An Anthology of Modern Poetry. Compiled by THE ENGLISH ASSOCIATION. Stiff paper covers, 2s. net; cloth, with Biographical Notices of Authors, 3s. 6d. net. Nineteenth Impression. 103-112th Thousand.

GEOGRAPHY BY DISCOVERY

Extracts from the narratives of Great Explorers, with new practical exercises. By JOHN JONES. 2s. 6d. net; Teacher's Edition, with Notes, &c., 3s. 6d. net.

A well known Lecturer in Geography writes: "It seems a very convenient and complete collection of records in a form which it has been impossible to get, and more than that, I think you are the first who has really tackled the problem from the teaching point of view."

CONVEYANCING DEPARTMENT.

This Department is now under the direction of Mr. F. C. NEEDS, B.A., whose experience, advice, and assistance are unreservedly placed at the disposal of **Purchasers** free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview. **INSPECTIONS and VALUATIONS** undertaken. **FOR SALE** (*inter alia*).

- Devon.—High Class Girls'.**—18 Boarders, 86 Day Girls, and 14 little Day Pupils. School in a flourishing condition and accounts given to bona-fide inquirers. Splendid property standing in its own grounds with tennis court, vegetable and fruit and flower gardens. Electric light installed. Contains Entrance Hall, 5 large reception and school rooms, 13 bedrooms, bath room, &c. The property is freehold and very valuable, and valued at £4,000, of which £2,000 can remain on mortgage. To any one buying the same the valuable goodwill and connexion and schoolroom furniture will be thrown in. We are informed that "this opportunity is one not to be missed."
- Kent.—Flourishing Good Class Girls'.**—Situate in good Premises and Grounds. 18 Boarders. Fees 22 and 25 guineas a term. 100 Day Pupils. Fees 4½ and 6 guineas a term. K.G. (mornings only), 3 guineas a term. Receipts about £2,400. Vendor, who is retiring from the profession, will accept one term's Capitation Fees, and sell the School furniture, &c., at valuation. Personally investigated and highly recommended to any lady or ladies of good educational experience.
- South Coast.—Middle Class Girls' Boarding and Day School.**—Situate in a favourite seaside resort. There are 32 Boarders, 2 Day Boarders, and 30 Day Pupils. The receipts for the Summer Term are over £900. Large House facing the sea with Private Chapel, &c. Rent only 100 guineas per annum. Lets well in the holidays. Goodwill by Capitation Fee, and House and School furniture at valuation.
- Near Manchester.—Flourishing Girls' Day.**—Receipts: 1919, £964; 1920, £1,025. School easily worked. Vendor, having made a competency, wishes to retire, and will accept £650 or close offer for goodwill, School furniture, plant, and apparatus.
- S.W. England.—Flourishing Girls'.**—Three weekly Boarders (Vendor has given up taking Boarders), 8 Day Boarders, and 79 Day Pupils. Receipts: £887 for 1917, £913 for 1918, £792 for 1919 (decrease owing to Vendor deciding not to take Boarders). Excellent premises, including playing field and drill hall, only £65 per annum. Profits £160 per annum; £500 for goodwill. School furniture and two pianos at valuation. Part of purchase money can remain.

ROYAL AIR FORCE SCHOOLS OF TECHNICAL TRAINING (BOYS).

APPLICATIONS are invited for a number of vacancies in GRADE III (ASSISTANT MASTERS) on the Civilian Educational Staff of the School for Boy Mechanics at the under-mentioned Royal Air Force Station:—CRANWELL, near SLEAFORD, Lincs.

The subjects of instruction include Practical Mathematics, Applied Mechanics, General Physics, Drawing, and English (Language, Literature, Geography, History, and Civics).

Candidates must possess a University degree or equivalent qualification, and will be required to teach either (1) Mathematics and Science, or (2) English, preferably with Mathematics or Science as a subsidiary subject.

The Salary scales, to which the full Civil Service bonus will be added, are as follows:—

Grade	Basic Scale,	Approximate rate with current bonus (subject to variation)
I (Head Master)	£450-20-£550	£757 to £934
II (Senior Master)	£250-10-£300-15-£450	£464 to £757
III (Assist. Master)	£150-10-£200-15-£350	£308 to £611

In fixing the initial rates of salary in appointments to Grade III, allowance may be made for previous experience of a suitable character up to a maximum of ten years (ten increments of the scale).

For those who complete three or more years of service there will be a scheme of deferred pay in lieu of pension.

Candidates who are selected to fill these vacancies will be expected to take up the duties of their appointments at the end of the Christmas vacation.

Applications for appointment must be made on the appropriate Form (A.M. 69), which can be obtained from the SECRETARY, Air Ministry, Kingsway, W.C. 2.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University. The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. **2s. 6d.** each.

New Volume just added.

PATON'S LIST
of
SCHOOLS and TUTORS

24th ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

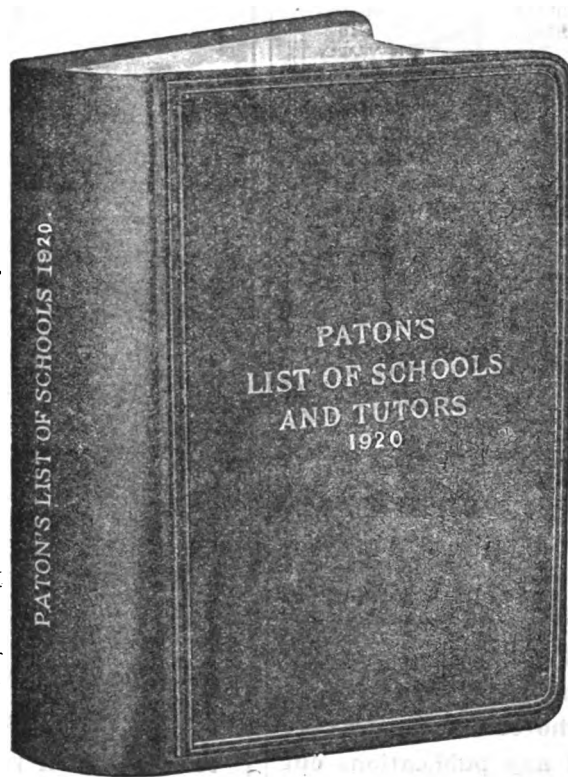

**EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.**

Dear Mr. Paton,

I shall be much obliged if you will insert my adv. again in your List of Schools. At any price it is cheap, for I know I get many more pupils than I can trace from your List. I know I have you to thank for the prosperity of my school.

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding-house."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term four pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

**Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.**

THE OLD TESTAMENT AND MODERN SCHOLARSHIP.

"The most striking thing about the volume is the skilful way in which the Editors have combined critical scholarship and the rich material afforded by modern scientific method and investigation with lucid arrangement, the whole being presented with a careful regard to the needs of students, who, without being specialists, are willing and eager to assimilate the results of modern scholarship."—*The Journal of Education* in a review of II Samuel.

A. & C. BLACK'S FIRST (REFORM) FRENCH COURSE

Edited by
F. B. KIRKMAN, B.A. OXON.

PETIT COURS PRÉPARATOIRE.

By L. H. ALLISON, Organizing Mistress in Modern Languages to the West Riding Education Committee. A two-term course in phonetic transcript leading up to *La Première Année*. May be used independently. Containing Frontispiece in colours, several black-and-white illustrations and line drawings in the text. Price 2s.

Chief features:—(1) Systematic and thorough training in the production of French sounds; (2) Vocabulary built up on the sounds as taught; (3) Intonation Exercises; (4) All the lessons have been practically tested in various classrooms during the last four to five years; (5) LESSON NOTES (supplied gratis) provide all the information necessary for the teacher; (6) If followed by the Phonetic Edition of *LA PREMIÈRE ANNÉE* (1ère Partie), a full year's course in phonetic transcript is secured.

LA PREMIÈRE ANNÉE DE FRANÇAIS.

By F. B. KIRKMAN, B.A. A day passed by an English Boy in Paris. Providing a complete course of instruction for the first year. Sixty-three illustrations, with complete Exercises revised and rearranged. Ninth Edition (completing 79,000 copies). Price 3s. 6d.

"The most conscientious and at the same time the most original application of the New Method that has been published in Great Britain."—*Les Langues Modernes*.

LA PREMIÈRE ANNÉE DE FRANÇAIS.

PREMIÈRE PARTIE (Phonetic Edition). Third Edition, Revised, and with the liaison of words indicated. Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. With Teachers' Lesson Notes (gratis) by L. VON GLEHN. Price 1s.

SOIRÉES CHEZ LES PASCAL.

By F. B. KIRKMAN, B.A. A First Reading Book. Evenings with the Fairies. Five coloured Plates. Second Edition, completely Revised. Price 1s.

FIRST FRENCH SONG BOOK.

By R. B. MORGAN, B.Litt. Thirty-seven Songs, of which ten are in Phonetic Script. Airs and Tonic Sol-fa. Third Edition. Price 1s.

COLOURED WALL PICTURES

to accompany *La Première Année de Français*. No. 1.—*La Famille Pascal à Table*. No. 2.—*La Porte Saint-Martin à Paris*; a Street Scene. Both drawn from French Models and Photographs. Measurements: 45 by 35 in. Prices: on linen, with rollers, varnished, 15s. net each; on paper, unvarnished, 5s. net each. Write for post card (reproductions in colour facsimile).

All Lesson Notes for Teachers separate and gratis.

A complete list of texts, with recommended courses, will be sent on application to the Publishers.

Published by A. & C. BLACK, Ltd.,

4, 5, & 6 Soho Square, London, W. 1.

REVIEWS AND MINOR NOTICES.

TESTS AND PERFORMANCE.

Mental Tests. By Dr. P. B. BALLARD.
(6s. net. Hodder & Stoughton.)

"We can test, but we cannot measure," is a limitation laid down by Dr. Ballard, yet the desire to measure is so ingrained in us that he, like all energetic investigators, is continually straining at the leash and reaching for the measuring rod. Because we cannot always attain mathematical accuracy, we need not give up the attempt at serviceable measurements. One is pleased to note Dr. Ballard's warm admiration for Binet's initiative, though some of us are hardnecked enough to believe that certain of our old hard-shell examination coaches, under the bad old system of payment by results, had reached quite as clear views on age-performance as ever entered the mind of the Paris experimenter; only it was no part of these successful schoolmasters' policy to proclaim their knowledge and their methods. Most of them could afford to smile at M. Binet's *naïf* "*Barème d'Instruction*." All the same, the fair-minded reader will prefer Dr. Ballard's mode of approach, and will acknowledge that in the book before us we have an admirable and much needed presentation of the whole problem from the English point of view; for we have had in the past some cause to be ashamed at the British public's lack of interest in the matter of mental tests, as compared with what is found across the Atlantic. It is not that our psychologists are behind in the race—Dr. Ballard makes an excellent case for the actual superiority of the English psychologists, so far as initiative and scientific accuracy go—but that the English people, as a whole, are not greatly interested in things of the mind, and have left it to the Americans to make the practical applications of a science to which our own countrymen have made the most brilliant contributions.

Up till now, however, the bulk of American literature on the subject has cast in the shade the English contributions, since these have been largely confined to articles in scientific magazines. Dr. Ballard has deserved well of his countrymen by producing a book that will go far to put the subject on a better footing. It is true that two books on examinations—one by H. Latham and the other by P. J. Hartog—have dealt excellently with one aspect of the subject, and should have been referred to in the present work; still, Dr. Ballard is entitled to all the prestige of the pioneer. If it did nothing else, the book has the great merit of expounding, from the English standpoint and in English terms, the store of materials gathered by the Americans. But it does much more: it gives an admirable statement of what underlies the whole problem, correlates all the available data, and supplies just that amount of actual material that makes it possible for the intelligent teacher to apply tests on his own account without fear of doing damage to his pupils. As himself a successful experimenter in this field, Dr. Ballard is entitled to appeal to his experience, and to claim the confidence of his readers in his recommendations. For he does not confine himself to the mere exposition of tests; he has much to say that is of value to the practical teacher with regard to many of the subjects of the curriculum.

The book is as interesting as it is instructive, but Dr. Ballard gets his effects legitimately, and has little sympathy with the meretricious effects of ill-founded generalizations. He does not, for example, hold himself personally responsible for the remark that, "roughly speaking, a child should be able to repeat as many syllables as the number of years he has lived." Though Dr. Ballard allows himself to fall asleep, in an artistic way, in an appendix, he is particularly wide awake in the text. He has, indeed, produced the most live and useful bit of work on this subject that has yet appeared.

THE TEACHING OF ENGLISH.

On the Art of Reading. Lectures delivered in the University of Cambridge, 1916–1917. By Sir A. QUILLER-ROUCH. (15s. net. Cambridge University Press.)

"My thoughts," Sir Arthur tells us, "have often strayed from my audience in a university theatre away to remote rural

classrooms where the hungry sheep look up and are not fed—to piteous groups of urchins standing at attention, and chanting 'The Wreck of the Hesperus' in unison." We know from many testimonies that Sir Arthur never lost the attention of his Cambridge audience; and we may suspect the reason to be that he was never purely academic: that the human sympathy which extended to the children in rural classrooms came home at some point to each individual among his hearers. For the same reason, the printed lectures should have no lack of enthusiastic readers. Especially ought every teacher of English to read them. If he does not teach better thereafter, let him drown his textbooks and seek another vocation.

"The real battle for English," Sir Arthur avers, "lies in our elementary schools, and in the training of our elementary teachers." But as the elementary teachers of the future will all pass through the secondary school, it is on the improvement of English teaching in the secondary school that we must base our hopes. That teaching will be inspired by the right spirit and aim in proportion as it is realized that "Humanism is a quality which can, and should, condition all our teaching; which can, and should, be impressed as a character upon it all, from a poor child's first lesson in reading up to a tutor's last word to his pupil on the eve of a Tripos."

Sir Arthur has had his own battle to fight at Cambridge in freeing the study of English from the pedantry that kills. It is good to know that since these lectures were delivered he has won his battle so far as the scheme for an English Tripos is concerned; for we may hope to see a steady stream of teachers trained on right lines pouring into our secondary schools. Those of us who are too old to go back to college and be trained in the right way may still mend some of our deficiencies, and reinforce our faith and power to stimulate others, by reading these lectures. They are as full of humour and humanity as their predecessors on "The Art of Writing" and on "Shakespeare's Workmanship"; in range of felicitous illustration, in earnestness of purpose, and maturity of judgment, they mark an advance. One small criticism: if the allusion on page 111 is to the English Association, the jibe is undeserved and not quite worthy of the lecturer. Two misprints in Greek (pages 102, 159) have escaped the generally careful readers of the Cambridge Press.

CURRENT PSYCHOLOGICAL LITERATURE.

- (1) *Children's Dreams*. By Dr. C. W. KIMMINS. (5s. net. Longmans.)
- (2) *A Thought Book on the Socratic Method*. Edited by T. S. KNOWLSON. (7s. 6d. net. Laurie.)
- (3) *The Elements of Practical Psychoanalysis*. By P. BOUSFIELD. (10s. 6d. net. Kegan Paul.)
- (4) *Human Psychology*. By Prof. H. C. WARREN. (12s. net. Constable.)
- (5) *The Psychology of Dreams*. By Dr. W. S. WALSH. (12s. 6d. net. Kegan Paul.)
- (6) *Mind-Energy*. By Prof. H. BERGSON. Translated by Prof. H. W. CARR. (10s. net. Macmillan.)
- (7) *Educational Psychology*. By Dr. D. STARCH. (14s. net. Macmillan.)
- (8) "Brief Course Series in Education."—*The Psychology of Childhood*. By Dr. N. NORSWORTHY and Dr. M. T. WHITLEY. (10s. net. Macmillan.)
- (9) "Brief Course Series in Education."—*The Psychology of Subnormal Children*. By Dr. L. S. HOLLINGWORTH. (10s. net. Macmillan.)
- (10) *Mental Tests in the American Army*. Compiled and Edited by C. S. YOAKUM and R. M. YERKES. (6s. net. Sidgwick.)

The ten books before us supply a useful indication of how things are going in the development of psychology. Naturally the readers of this journal have a special interest in the educational applications of this study, but nothing psychological can be said to be entirely alien to the teacher. He will therefore be interested in M. Bergson's "Mind-Energy" (6), though, if he knows the published works of this master, he will find little that is fresh in these collected lectures and essays. They form, however, excellent illustrative material, and in some ways the exposition here is better than we find in the previous volumes. In particular the lectures are

brilliantly clear and attractive. There is, *per contra*, a good deal of repetition in the book. Still of a general type is Prof. Warren's "Human Psychology" (4), from which we see that the modern tendency is still towards emphasizing the psychological side. Many of the terms that are familiar to older readers are kept in the background, and such terms as "organism," "receptor," "behaviour," "attitude" come to the front. The book is excellent for teachers, even if they have to make their own applications. All the same we turn with some interest to Dr. Starch's "Educational Psychology" (7), to discover whether at last we are going to have a distinctively professional psychology.

We have been told from the beginning of the specific training of teachers that psychology and education stand outside of each other, that they cannot be joined together in an organic way; that, like oil and water, they cannot be induced to mix. Dr. Starch, however, has produced a volume of which the table of contents does not suggest the good old-fashioned subjects of the educational psychologist. On the philosophical side Prof. Welton had already made a beginning of a real psychology of education, and, on the more practical sides, Thorndike, Bagley, and McMurry had made an excellent start; but here Dr. Starch has brought matters to a head, and presents us with a volume that suggests a new psychological technique. It is true that some readers may be inclined to say that only the first of the three parts into which the book is divided is really occupied with psychology; there we have all that is necessary for the teacher to know about the native equipment of human beings, including such matters as instincts, variations, correlations, inheritance, and all the paraphernalia of mental tests. Part II is devoted to the psychology of learning in general, and Part III to the psychology of learning the various school subjects. The book is full of diagrams and charts that will no doubt gladden the heart of Dr. Titchener. Teachers should note that Dr. Starch believes that probably the most important single fact discovered with reference to education in the last decade is "the enormous range of ability and the resulting overlapping of successive grades."

"The Psychology of Childhood" (8) is less novel in its treatment, as is only to be expected in a text meant for the use of normal schools, but it marks a great advance on the usual type of book prepared for this purpose, and will be found excellent for our present two-year students in training. Coming to more specialized work we find in the "Psychology of Subnormal Children" (9) a very welcome contribution to a distressingly difficult subject. Dr. Hollingworth deals with her problem sympathetically and with full knowledge. All the newer views are expounded, and all the newer methods described. Some very valuable distinctions are drawn, and a marked characteristic of the book is the help it gives in avoiding certain mistakes in classification that are rather prevalent even among capable teachers.

It would have been surprising if our list had not included a work on psychoanalysis, since this subject is at present so much in the public mind. But Dr. Bousfield's "Elements of Practical Psychoanalysis" (3) is written entirely from the medical point of view. It is clear and well illustrated from the actual experience of its author, but will not be found of much value by the practising teacher. It is true that the section on dreams is very interesting, but for our purposes, Dr. Kimmings's delightful little book on "Children's Dreams" (1) is much more promising. It does not, however, altogether redeem the promise. It supplies a great deal of material of a very attractive kind, but hardly makes a satisfactory use of it. We want more generalizations based on what is recorded. It is to be hoped that Dr. Kimmings will complete his book. Chapter VIII is inadequate, and few are so well qualified as its author to make an excellent thing out of it in a new edition. It is seldom that a reviewer can in this way invite a longer book. There is no lack of bulk in Dr. Walsh's "Psychology of Dreams" (5), but it does not lead us very far. He adopts the simple natural history method, after the type of Macnisch. The book has the distinction of keeping Freud and his school in their proper place. Most writers on this subject just now

have room for little else than Freud and his followers. It is significant to note that in Bergson's lecture (1901) on "Dreams," Freud is only once even mentioned, though at that time "Traumdeutung" had been published.

Self-education is not entirely neglected by the psychologists, as is proved by Mr. Sharper Knowlson's "Thought Book on the Socratic Method" (2). The book is a practical help in the application of the author's psychology, and consists in an ingenious set of exercises for practising the mind on a series of provocative quotations. It is doubtful whether the Socratic method can be applied by means of exercises in a book. Does the method not imply the actual give and take of personal intercourse?

Not the least significant of these ten volumes is "Mental Tests in the American Army" (10). There has been a keen desire among all English-speaking teachers for some definite information about these tests, of which we have heard such wonderful things. Thanks to Majors Yoakum and Yerkes, we have here the information desired, including the "Examiner's Guide" for applying the tests. This gigantic psychological experiment deserves all the publicity it can have, so we rejoice that a complete and detailed account of the methods and results of psychological examining in the American army is in course of publication in the Memoirs of the National Academy of Sciences, Washington.

CLASSICS.

"Junior Latin Series."—*Virgil: Aeneid I, Aeneid II*. Edited by J. JACKSON. (2s. net. each. Clarendon Press.)

These two additions to the Oxford "Junior Latin Series" are both excellent of their kind: each contains introduction, text, notes, index of proper names and vocabulary, and the introduction to each is unusually good. Mr. Jackson is to be heartily congratulated upon the careful and successful manner in which he has set forth the details of Virgil's life and his merits as a poet in language which can be understood by schoolboys. Especially happy is his comparison of Theocritus and Virgil (in the Eclogues) with Shakespeare's "When icicles hang by the wall" and Andrew Marvell's "How long wilt thou, fair shepherdess?" from the point of view of vigour and truth to life. This is the kind of criticism that helps boys, and we should like to see more of it. But why all the rest of the *apparatus*—notes, index of proper names and vocabulary? Something, of course, is needed; but is not the proportion of five pages of notes to three of text excessive? Editors who overload the classics by writing notes on every conceivable difficulty succeed only in making schoolboys think that Latin is more difficult than it is. Boys who have been properly taught can read Virgil with the help of about a tenth of the notes given here.

Translations from Lucretius. By R. C. TREVELYAN. (3s. net. Allen & Unwin.)

As the title implies, this is not a complete translation of Lucretius, but a rendering in blank verse of several *purpurei panni* collected from the whole of the six books. Neither its object nor its usefulness is very apparent, though we can well believe that it has amused the author's leisure hour, and he is at times very happy in his renderings; but we must confess that, as a rule, we find him prosaic. There is little of the sonorous grandeur of either Empedocles or Lucretius in—

"For the paved highway of belief through touch
And sight leads straightest into the human heart
And the precincts of the mind."

Our comparison is chosen at random, but it will serve to indicate to the discerning the degree to which Mr. Trevelyan has succeeded in recapturing the spirit of his original.

A Skeleton Latin Grammar. By E. NEWTON. (3s. 6d. net. Blackie.)

A frankly utilitarian book which consists largely of the tabular presentation of accident and paradigms of verbs. The idea is good, but loses half of its value from its presentation not having been simplified enough. Why paradigms in English and in Latin, active and passive? We have seen in one paradigm all that Mr. Newton expresses in a dozen. The exercises are of the old uninspired type—disconnected sentences, such as "The Romans are praised by the Belgians," and "The captive is saved by the kind queen."

EDUCATION.

The Concept of Nature. By Prof. A. N. WHITEHEAD, F.R.S. (14s. net. Cambridge University Press.)

This book contains the substance of the Turner Lectures, delivered at Trinity College, Cambridge, in the autumn of 1919. Here Dr. Whitehead returns, from a different side, to the problems dealt with in his recent book on "The Principles of Natural Knowledge." For the non-mathematical reader this volume will be found more approachable than its predecessor, but he must not expect to find easy reading. He must be prepared to face a presentation that discards all the old technical terms of philosophy and makes an entirely different approach from that of the metaphysicians. Nature is what we observe in perception through the senses. When we think about Nature without thinking about thought we proceed homogeneously; when thought about thought is included we think heterogeneously. This vital distinction runs right through the book. Dr. Whitehead dismisses with contempt the old-fashioned bifurcation theory: if the reader retains a belief in that theory, Dr. Whitehead assures him that "not a word of what I have here written will be intelligible." He vigorously opposes the view that time and space are absolute; he maintains that they must be dealt with in relation to one another, and works in his theory that the "event," as combining temporal and spatial elements, must be taken as the unit of thought in relation to Nature. He makes no pretence at ultimate explanations. We can never hope to reach the *why* of knowledge: we must remain content with seeking for the *what*. The effect of the book is stimulating in the highest degree, but it will disappoint those who are fond of that "tidiness" in thinking that charmed the medievalists but exasperates Dr. Whitehead. He talks about "ragged edges" in our thinking about Nature, and he tells us that his theory, so far from leading to clear-cut explanations of everything, will result in "a greater mystery and a deeper ignorance." But the fair-minded reader will admit that the resulting mystery and conviction of ignorance lead to a wholesome desire to know. The "event-particle" is an insidious microbe that inevitably sets up the disease of hard thinking.

Imagination and its Place in Education. By E. A. KIRKPATRICK. (6s. 6d. net. Ginn.)

Mr. Kirkpatrick's "Fundamentals of Child Study" is very well known in this country as an able and painstaking piece of work, and one was prepared to find that his new book on imagination is marked by some sound qualities. It is true that one finds it difficult at times to resist the conviction that this is an example of book-making rather than a genuine contribution to educational thought, because so much of what the writer says is to be found in the standard psychologies for teachers. We think, too, that the time has come for distinguishing between imagery and imagination, rather than between "reproductive" and "productive" imagination, because the former pair of terms tends to greater clearness of view. Again, notwithstanding the author's disavowal of the doctrine of formal training, he seems to us to come very near accepting that doctrine, especially in the chapters on "School Subjects and the Imagination." There is, however, a good deal of interesting matter in the book. We like, in particular, the chapters on adolescence ("the period of day dreams"), and on the evils and dangers of imagination in children. But the best part, in our opinion, is the large number of first-hand experiences, related by students and others, by which the author illustrates his statements.

Scouting and the Adolescent, with Special Reference to Secondary Schools. By the late J. A. G. DYMOND. (1s. 6d. net. Manchester University Press. Longmans.)

The literature of the Boy Scout movement is now very considerable, but there is still room for work on the subject by trained teachers. The Chief Scout, one of the most deservedly honoured men of our time, has given the inspiration, and has been supported by a great band of loyal and capable workers. Probably no one knows better than he, however, the value of criticism, provided it be sympathetic and constructive and not mere fault-finding. In this little volume, the work of one who is unhappily no longer with us to help in carrying his suggestions into effect, we have an excellent treatment of the subject from the teacher's point of view. From his own experience Mr. Dymond was led to the opinion—and this is, we think, the most important point he makes—that "in the past altogether too much emphasis has been laid on the assumption that anybody who is willing will probably become a successful scoutmaster." The scoutmaster must be properly chosen and trained, and to that end the universities and training colleges have a part to play. Mr. Dymond's chapters on scouting in elementary and in secondary schools, his plea for fuller recognition, and his remarks on the superiority of the Scouts to the various Boys' Brigades, are all well worth reading and pondering. We hope the book will have a large sale.

Human Efficiency and Levels of Intelligence. By HENRY HERBERT GODDARD. (6s. 6d. net. Oxford University Press.)

These lectures, delivered under the Louis Clark Vanuxem Foundation at Princeton University, are the inevitable result of the development of the Intelligence Test. As a recognized authority on the subject, Mr. Goddard is entitled to prophesy the probable lines along which progress is likely to be made. His picture is rather grim. He maintains that every human being reaches at some time a level of intelligence beyond which he never goes, and that these levels range from the lowest, or idiotic, to the highest level of genius. His tables show that nearly one half of the population of the United States do not rise above the intelligence of normal children of twelve. It is an appalling thought that in the States about 10 per cent. of the adults are of a mental age of ten or less. Mr. Goddard works out in a most interesting way the implications of his thesis, and takes all sorts of precautions against error; above all, he recognizes that intelligence must be estimated in connexion with other powers not yet so fully studied. Which is well: for his own high intelligence has not saved him from writing on page 99 about "the venial vote." A book that demands attention.

Sex Education and National Health. By C. G. HARTLEY. (6s. net. Parsons.)

There is a growing disposition to give undue prominence to what is after all only one part—even if an important part—of education. Some teachers and parents are becoming obsessed with the dangers of adolescence, and some re-adjustment of perspective is becoming imperative. Of course, there has been too much mystery about sex in the past, and children have been allowed to grow up in ignorance of necessary knowledge, but there is now a danger of premature enlightenment encouraging undesirable precocity. Having uttered a caution, we are glad to be able to say that Mrs. Hartley writes with discretion and restraint and that her book will prove helpful to all whose duty it is to answer the questions which arise in the minds of developing boys and girls. Her suggestion that the staffs of all schools should include health and games masters or mistresses deserves careful consideration.

Athena. A Yearbook of the Learned World. Edited by C. A. EALAND. (15s. Black.)

Mr. Ealand here provides the English-speaking races with a compilation on the lines of the well known "Minerva," dealing with the institutions of higher education and the learned societies of the British Empire and the United States. It is hoped in future issues to include the learned bodies and institutions of our Allies. The volume should find a place in all reference libraries.

The Yearbook of the Universities of the Empire. 1918-1920. Edited by W. H. DAWSON. (15s. Bell.)

Mr. Dawson's yearbook presents a conspectus of the calendars of all British universities at home and overseas. A special feature of the present issue is an appendix, in which an account is given of war work, other than combatant, undertaken by the universities of the United Kingdom, and of the contributions to H.M. Forces of the overseas universities.

ENGLISH.

An Anthology of Recent Poetry. Compiled by L. D'O. WALTERS. (1s. 6d. net. Harrap.)

A charming little selection of present-day poems for use in schools, smaller and, on the whole, easier than the English Association's "Poems of To-day," though there are many verses common to the two anthologies. Modern rhythms, and the descriptive touches and effects of modern poetry, often appeal to children whom the older poets leave cold; and the wise teacher will make use of this appeal, taking care at the same time not to disparage the older poets, but to make the enjoyment of contemporary poetry lead on to an appreciation of the glories of the past.

An Introduction to the History of the English Language. By P. G. THOMAS. (5s. net. Sidgwick.)

It is to be feared that these lectures, apart from such assistance of interpretation as a lecturer could give in delivering them, would be at once too meagre and too difficult for profitable reading. Language, whether approached from the side of semantics or of phonetics, is a difficult study, and a good book by an original authority is really easier as well as more inspiring than a condensation.

"The Mermaid Series."—*Webster and Tournour.* With an Introduction and Notes by J. A. SYMONDS. New Students' Edition. (3s. 6d. net. Fisher Unwin.)

This is a "students' edition," with nothing repellently scholastic about it. The four great tragedies of blood—Webster's "White Devil" and "Duchess of Malfi," and Tournour's "Atheist's Tragedy" and "Revenger's Tragedy"—are set out in the alluring type of the famous "Mermaid Series." The rest of the series is being similarly reproduced.

Selections from Early Middle English (1130-1250). Edited, with Introductions and Notes, by Dr. J. HALL. (Part I, Texts, 7s. 6d. net; Part II, Notes, 15s. net; together, 21s. net. Clarendon Press.)

We are slowly recovering from the set-back caused by the war and its secondary effects, and the university presses are once more adding to the material at the disposal of the advanced student. We realize how great has been the delay in this work when we read that much of Dr. Hall's work was already in type in 1915. The scope of these two volumes is to give in an easily accessible form selections from Early Middle English texts. Some of these selections have already been available in Morris's "Specimens of Early English," and Dr. Hall modestly claims that this book is merely supplementary. It is, however, much more than that, for, apart from the examination and collation of additional manuscripts, there are many pieces quite new or only printed in such works as Wright's "Biographia Britannia Literaria" or some German collection. Several of the extracts, notably the well known "Peterborough Chronicle" and the "Charter of Henry II," should prove as valuable to the history student as to one who is concerned with the grammar and language, for the notes are as clear and helpful in the one direction as in the other. Other familiar selections are extracts from Layamon (with the advantage of being able to compare the two principal texts), the Proverbs of Alfred, the "Ancien Riwe," the "Ancien Wisse." Turning to the newer pieces, one is glad to see the Worcester Fragments, for many reasons. Anyone interested in the religious ideas of the Middle Ages should read "The Soul and the Body," together with the editor's able analysis of the origin and development of the theme. Saint Godric's hymns are little known, and yet are of exceptional interest metrically, with their abandonment of alliteration and use of the syllabic principle noteworthy in such early poems. The "Notes" are always a model of what is required, and hardly ever does one find a statement which could be questioned. Altogether a most valuable addition to the students' library.

HISTORY.

"Great Nations."—*Medieval Europe: its Development and Civilization.* By Prof. L. THORNDIKE. (15s. net. Harrap.)

This volume is a reprint, revised and adapted to the use of English readers, of an excellent textbook first published in America in 1917. It is one of the best introductions to the study of the Middle Ages that has up to the present been issued on either side of the Atlantic. It gives the necessary skeleton of political history, but it concentrates attention more particularly on social, economic, and cultural history. The ideas of St. Augustine, the legal reforms of Justinian, the religious principles of Mohammed, the system of feudalism, the revival of learning, the features of Gothic architecture—such are types of the topics that are treated with fullness and with amplitude of learning. Prof. Thorndike begins his work with a discourse on the study of history, which culminates in an appropriate demonstration of the importance and the significance of the Middle Ages. He then proceeds to treat of the three factors whose combination produced the characteristic civilization of the period—viz., the Roman Empire, the Christian Church, and the Teutonic barbarians. Next he describes, in a series of profoundly interesting chapters, the institutions and ideas of medieval Christendom. Finally he traces the transition from medieval to modern times, a process which he attributes primarily to the development of commerce and the growth of towns. A comparison of the present edition with that originally published in America shows some improvements and some losses. The maps have suffered by the omission of the colouring; all the bibliographies and suggestions for reading have gone. On the other hand, thirty-three admirable illustrations have been inserted, and a number of awkward Americanisms have been altered to good English in the text. For example, the statement that Tamerlane's "oldest son went him one worse" is translated into the statement that his "eldest son outwied him." Again, the remark that the works of Galen and Ptolemy had been "warmed over and made hash of" is toned down to the phrase "studied and commented upon." Henry II is no longer a "dynamo," but merely "a man of great energy." John, however, is still made to "pocket" money (page 435), and the tribute which he promised to pay to the Papacy is again put at one thousand *pounds* instead of one thousand *marks* (page 486). Two old errors are repeated—viz., that Theodahat married Amalaswintha, whereas he merely became her colleague in the government (page 131), and that Alfred divided England into shires and hundreds, whereas both divisions were of much older date. Errors and solecisms are, however, very few, and they do not materially impair the value of an able and stimulating book.

(Continued on page 760.)

London: HUMPHREY MILFORD, Oxford University Press, Amen Corner, E.C. 4.

The Story of Cambridgeshire as Told by Itself.

By Dr. W. CUNNINGHAM. (5s. net. Cambridge University Press.)

This booklet of some 15,000 words contains the substance of a course of six lectures delivered by the late Archdeacon Cunningham to an audience of Cambridge teachers shortly before his lamented death. The aim of the lectures was to show from local examples how the relics and monuments of a single shire can be used to illustrate and vivify the general history of England. The Archdeacon's examples are chosen not so much from the written records of the county as from the tangible and visible remains—the earthworks, the Roman roads, the churches and castles, the still existent fairs and markets. Although the prime interest of the book is limited to the people of the particular region treated, it makes a secondary appeal to a far larger public; for it indicates a method applicable to every part of England, and it points to sources of information available in every locality. The usefulness of the booklet impels us to ask whether it was necessary to charge for it the prohibitive price of 5s. It is but a paper-covered pamphlet of 70 pages. Before the war it would have been sold for 1s.

"The Story of the English Towns."—Plymouth.

By A. L. SALMON. (4s. net. S.P.C.K.)

This little volume worthily maintains the traditions of the excellent series to which it belongs. It is literary rather than antiquarian in its structure—that is to say, it is to be grouped rather with Mr. Fletcher's "Sheffield" than with Mr. Westlake's "Westminster." It passes very rapidly indeed over the ancient and medieval periods, only becoming full in its narrative when it arrives at Elizabeth and the Sea Dogs of Devon. Very interesting are the accounts of the work of the local navigators, the stirring days of the Civil War, and, above all, the development of the dockyards and their achievements during the wars of the eighteenth and nineteenth centuries.

MATHEMATICS.

The Arithmetic of the Decimal System. By Dr. J. CUSACK.

(6s. Macmillan.)

Regarded as a school book, this is for use to-morrow, not to-day, since it is useless to teach an unrecognized system of measures. As propaganda on behalf of the simplification of our complex and time-wasting system of weights, measures, and money by their reduction to a decimal scale, it may serve a good purpose. The author does not advocate the adoption of the metric system; he considers, and probably most persons of the English-speaking communities will agree with him, that there is no valid reason for discarding the pound weight, the yard, and the gallon as fundamental standards. A Bill to decimalize our coinage with the pound sterling as standard was introduced into Parliament in 1918 at the instance of the Associated Chamber of Commerce, with the approval of the Institute of Bankers, and no serious opposition to its passage should be encountered when Parliament finds time to give its attention to the matter. But the tables of weights and measures will not be altered so easily. For example, if all units of length are to be ten-fold multiples of the yard, there will be no place for the mile; yet it is so firmly established that its supersession by the thousand-yard would be extremely difficult. The chapter on Alligation is a curious survival of bygone days, and the author does not seem to be aware—or, at least, does not indicate—that with more than two components the solution of the inverse problem is indeterminate. Nevertheless, the book will be of service, provided it falls into the proper hands, by showing how much time could be saved from the teaching of arithmetic and devoted to other purposes if a decimal system were in vogue.

- (1) *General Mathematics.* By R. SCHORLING and W. D. REEVE. (7s. net. Ginn.) (2) *Elementary Applied Mathematics.* By Prof. W. P. WEBBER. (7s. 6d. net. Chapman & Hall.)

These two American books are representative of a movement in the States the aim of which is to bring the mathematics taught in the later years of school life into vital contact with the problems of citizenship. It is asserted by many competent American authorities that secondary mathematics teaching has been characterized by a futile attempt to induce all pupils to become technical college mathematicians. The first-named of the above volumes is more elaborate than the other, but their general characteristics are the same. They aim at presenting such simple principles of algebra, geometry, trigonometry, and graphics, the whole involving numerous and rigorous applications of arithmetic such as the average man is likely to remember and use. The curricula of American schools differ so greatly from those of England that a like reconstruction of the courses of mathematical instruction is probably not felt to be required so urgently here, but we think it would be well to take a leaf out of the American book, and include as part of the normal course some exercise in the use and interpretation of statistics. The first of the above books is enlivened by historical notes, portraits of eminent mathematicians, and anecdotes concerning the same. But will the average girl think more favour-

ably of mathematicians when she learns that Bhaskara tried to console his daughter, whom he had forbidden to marry, by addressing to her verses propounding problems in syncopated algebra?

MISCELLANEOUS.

Old Village Life; or, Glimpses of Village Life through all Ages. By P. H. DITCHFIELD. (7s. 6d. net. Methuen.)

The Rev. P. H. Ditchfield, himself rector of a rural parish, is well known as a lover of agricultural England, as a collector of rustic relics, and as an antiquarian whose researches have rescued from oblivion many customs of the country and much peasant lore. This latest of his popular works is intended to give "glimpses of village life through all the ages." In its character it is social and economic rather than archaeological. It is concerned with the condition of the labourer at different periods in our country's history, and it investigates this question primarily in order that the problems of the present day may be dealt with wisely and intelligently. The opening four chapters are preliminary in nature and only indirectly relevant to the main theme. They deal with prehistoric peoples, earthworks, burial mounds, and megalithic monuments. Then come chapters on village life in Roman, Saxon, Norman, and Plantagenet times. These, from the scantiness of the original material, are necessarily slight and superficial. The fuller treatment commences with the Tudor period and continues to recent times. Mr. Ditchfield has collected information from wide fields, and he has compiled a volume which, without being profound, is full of interest and instruction. It is copiously illustrated.

The Early English Cotton Industry. By G. W. DANIELS.

(8s. 6d. net. Manchester University Press; Longmans.)

This is a work of historical research which worthily maintains the high reputation that Manchester University has secured as a school of historical investigation. The chief source from which its new information has been gleaned is a unique series of day-books, cash-books, ledgers, and letter-books, covering the period 1795–1835, kept with meticulous care, and preserved in perfect condition by the great firm of M'Connell & Co. To the explanation and interpretation of these Mr. Daniels has devoted much time and a large measure of trained ability. He has had, moreover, the advantage of the advice and assistance of Prof. Unwin, who has contributed to the book a masterly introductory sketch on the beginnings of the cotton industry in medieval and early modern times. Mr. Daniels, in the body of the book, deals with the development of the manufacture, especially from the time of the Industrial Revolution. He then describes the organization of the trade, and the effect of the introduction of machinery and steam power. Finally, he gives a detailed description of the affairs of Samuel Crompton, illustrated by a number of his letters. The whole book is of great interest and importance. It is one of the freshest and most original contributions to the study of economic history that has appeared in recent years.

MODERN LANGUAGES.

"The Educational French Texts."—*An Intermediate Textbook of French Composition.* By Prof. T. B. RUDMOSE-BROWN. (2s. 6d. net. Educational Co. of Ireland.)

This volume consists of two nearly equal parts, the first of which treats of various branches of French syntax, while the second consists of exercises. The subjects selected for discussion in the first part are, according to the preface, those which have not been "treated satisfactorily in the grammars commonly in use." Thus we have a thorough discussion of the use of the moods and tenses, of that most elusive of verbs, *devoir*, and of the translation of "if" and "even if," including the use of *si* with the indicative, a point rarely adverted to in French grammar; also a number of miscellaneous hints about pronouns, prepositions, and the meanings of some nouns and verbs. On the other hand, there is nothing about the uses of the article or the position of adjectives—two chapters in syntax equal to any in importance and difficulty. However, students ought rather to be grateful to Prof. Rudmose-Brown for the great help he gives them than critical of his omissions. The exercises on particular points seem to us rather too difficult: if the whole exercise in such cases needs hard thinking, the student cannot concentrate his mind on the point under consideration. The whole book, indeed, is of an advanced character, and certainly cannot be used with advantage by any learners below the stage of Intermediate Honours.

Les Silences du Colonel Bramble. By ANDRÉ MAUROIS.

Edited by E. A. PHILLIPS and E. G. LE GRAND. (5s. 6d. net. Cambridge University Press.)

As this book is apparently meant for use in the classroom, it is necessary to warn teachers that it has not been properly ex-

(Continued on page 762.)

THE "A.L." GEOGRAPHIES.

PREPARED ON REGIONAL LINES. PRINTED ON GOOD PAPER. CHEAP.

These are a series of small Geographical Textbooks for the use of Pupils in both Primary and Secondary Schools. They are thoroughly up to date and are very fully illustrated with new Sketch Maps, Diagrams, and Views. Teachers who are taking Geography on the most approved modern lines will find these little books an invaluable aid.

THE BRITISH ISLES, 80 pp., with 31 Maps and Diagrams, and 23 Illustrations, prepared by WALTER T. TAYLOR, F.R.G.S., *late Lecturer in Commercial Geography, Leeds Central School of Commerce* ... published 8d.

THE BRITISH EMPIRE BEYOND THE SEAS, 102 pp., with 15 Maps and Diagrams, and 27 Illustrations, prepared by JAMES H. TORBITT, M.A. (Cantab.), *Assistant Master at the Grammar School, Ossett, and late Principal of Wakefield Pupil Teachers' Centre* ... published 8d.

EUROPE, 104 pp., with 11 Maps and 28 Illustrations, prepared by T. W. POWELL, M.A., *Master of Method, Bede College, Durham* ... published 8d.

NOW READY. Price 5s. 6d.

THE CHEMISTRY OF CROP PRODUCTION

BY

T. B. WOOD, C.B.E., M.A., F.I.C., F.R.S.

Fellow of Gonville and Caius College, and Drapers Professor of Agriculture in the University of Cambridge;

Lately one of H.M. Development Commissioners, and British Delegate to the "Commission Scientifique Inter-alliée du Ravitaillement."

The object of this book is to show how an elementary knowledge of the principles of Chemistry and Physics can be used to solve many of the fundamental problems of crop production. It is assumed that the reader already has the required knowledge of elementary science.

The book is not a compilation of the results of scientific agricultural experiments, nor is it a collection of practical hints to farmers. Its aim is to set out in the form of a connected story the various factors which determine the productivity of the soil.

purgated. Any one who thinks of putting it into the hands of children had better read it carefully first. But, even if the offending passages were removed, we could not recommend it, most of the matter being entirely unsuitable for boys and girls. The work is one that has had some vogue, but, in our opinion, it has been greatly overrated. The portraits of the English officers and the chaplain are too unlike the originals even to be called caricatures. It is difficult, indeed, to know whether these sketches are intended for satire or realism. The anecdotes are dull and the smart talk duller. Even the language is not above suspicion; colloquialisms are frequent, and words that the dictionary does not contain occur from time to time.

RELIGIOUS KNOWLEDGE.

Living Parables; or, Scripture Lessons by Dramatic Methods. Edited by the Rev. A. E. W. SHEARD. (5s. net. Skeffington.)

Mr. Sheard's volume strikes us as being not only interesting, but really useful. It contains a plea for the adoption of the dramatic method in the teaching of Scripture lessons. But the most valuable part of the book is the specimens which are given of the way in which the method can be applied. Dramatized versions are included of various parables (The Good Samaritan, Good Shepherd, The Prodigal Son, &c.—in all, twelve). And these possess the merit of being actual products of the method in its practical application. The following extract will serve to illustrate the general character of the dramatized versions. It is part of a scene from "The Good Samaritan":—

SCENE III.—THE INN (MORNING).

Host, Good Samaritan, Jew—sleeping. Apart, Priest and Levite—sleeping. Host awakes; then awakens Good Samaritan; then Priest and Levite.

GOOD SAMARITAN (to HOST). I think I will go and look at my friend.

HOST. I will come with you. (They go and look at JEW.)

GOOD SAMARITAN. He is not fit to travel to-day, and I must continue my journey. Can he stay here till he is well? Will you take care of him?

HOST. Sir, you teach men to be kind. I will gladly look after your friend.

GOOD SAMARITAN (to HOST). Here, then, are two pieces of silver. If you have to spend more, when I come again I will repay you.

It may be added that a number of excellent illustrations of the scenes as acted enrich the volume.

SCIENCE.

Relativity: the Special and the General Theory. By Prof. A. EINSTEIN. Authorized Translation by Dr. R. W. LAWSON. (5s. net. Methuen.)

Coming, as it does, from the chief source of the theory of relativity, the book is particularly worthy of study. It is an attempt to present the theory in popular form, and, like all such attempts, it begins in a very interesting and simple manner, and gradually becomes more abstruse. Whether any attempt to present the theory of relativity in such a manner that it can be understood by a non-mathematical reader can succeed is open to question, but this book of Prof. Einstein goes a long way in that direction, and in describing the special theory of relativity the author has undoubtedly achieved a great measure of success. In fact, the relation of the special theory to the general theory is made exceedingly clear. The book is worth reading, especially for the lucid way in which the Lorentz transformation is presented. From this point onwards, through the part concerning the general theory of relativity, the book takes on more and more the character of an outline or sketch, leaving much to be filled in to obtain even a superficial knowledge of the theory. The translator has been very successful in conveying to the reader the spirit of lucidity of the original work.

"The Nature Lover's Series."—*The Seashore.* By W. P. PYCRAFT. (4s. 6d. net. S.P.C.K.)

This interesting book by a well known authority might well be added to the school library. It would also make a suitable prize-book. We agree with its author that a seaside holiday would become both more enjoyable and more useful if inquiries like those raised in this volume were undertaken with such guidance as is here provided.

More Plants We Play With. By H. R. ROBERTSON. (7s. 6d. net. Wells Gardner.)

In arranging nature study lessons for young children these beautifully illustrated descriptions of familiar plants should be useful to teachers. The book is sure to be very popular in home schoolrooms, and will be of real assistance to governesses.

"The Library of Romance."—*The Romance of the Microscope.* By C. A. EALAND. (7s. 6d. net. Seeley, Service.)

We have here a worthy addition to a deservedly popular series. Not only are the construction and theory of the microscope simply explained, but the contributions to knowledge which its use in modern times has made possible are described in a popular and interesting manner. The chapter on the microscope as detective will make a direct appeal to boy readers. The volume may be recommended as a prize, and certainly deserves a place in the school library.

The Boy Electrician. By A. P. MORGAN. (7s. 6d. net. Harrap.)

The majority of young boys exhibit a desire to make toys and simple apparatus, and the inclination is one which deserves encouragement. Many of them are handicapped either by the want of appropriate tools and materials or by the absence of adequate guidance. This book is intended to provide ample information for the construction of appliances in electricity and magnetism, extending from the simple compass to wireless telegraphy, dynamos and motors, telephones, the telegraph, and an electric railway. The detailed and dimensioned diagrams and the printed instructions give all the information a boy may desire. But the text does not attempt to supply much knowledge of the theory of the subject. Perhaps this is well, as the limited instruction given is open to criticism. Thus, it is misleading to tell a young student that "magnetism flows along certain lines called lines of magnetic force." This example will suffice to justify the comment.

BOOKS OF THE MONTH.

Classics.

NORMAL

THE COLLEGE FOR CORRESPONDENCE TUITION.

Avoid
Risks
By
Joining
The
Normal.

NORMAL TUTORS AND NORMAL TUITION.

The "Normal" Courses are carefully and thoughtfully prepared by the Principals, assisted by other experts with long experience in this particular work. Changes in the syllabus are specially noted, difficulties are anticipated, any alteration in the standard of attainment required is marked, useful suggestions from former students and others incorporated, and every detail likely to affect the student is given the closest attention. The capital at the command of the "Normal" ensures the engagement of tutors of the very first rank, with the result that the "Normal" tuition is the best correspondence tuition available. The "Normal" aims at perfection, and spares neither time, money, nor trouble to secure it.

METHOD OF PREPARATION.

At the beginning of each lesson a set of papers is sent to each student to be studied. The work sent is carefully graded and the individual capacity and requirements of the pupil are minutely considered in allocating the ground to be covered. Full notes, hints, and advice accompany the work, with explicit instruction for study and working the exercises.

Thorough preparation for the examination is the essence of "Normal" tuition; true education in the best sense of the word is always kept in view.

CORRECTION OF WORK-PAPERS.

When completed by the students, the work-papers are sent to the College. They are carefully corrected either by or immediately under the supervision of the Principals themselves, and promptly returned with complete solutions, model answers, maps, diagrams, &c. Difficulties are smoothed, hazy points elucidated, and more work is sent, the quantity varying with the capacity of the student.

SINGLE SUBJECTS.

A pupil may receive instruction in a single subject.

EXAMINATIONS FOR WHICH THE NORMAL PREPARES.

County Scholarships.	A.C.P. and L.C.P.
Pupil Teachers.	Central Welsh Board.

"Seeing a thing is worth a hundred descriptions."

SCHOOL COMPETITION ESSAY.

UNDERWOOD & UNDERWOOD

The World Stereographers &
Educational Photographers,

LTD.

HAVE PLEASURE IN OFFERING

PRIZES OF TWO GUINEAS IN EACH COUNTY

FOR THE BEST SCHOLARS' ESSAYS ON THE SUBJECT,

"WHY ARE TWO EYES BETTER THAN ONE AND WHY ARE STEREOGRAPHS BETTER THAN ORDINARY PHOTOGRAPHS?"

CONDITIONS.

1. Scholars competing must be between the ages of 10 and 16 years.
2. Essays must be written in ink and be about 500 words long.
3. Each Essay must have on the top the full name, age, and home address of the scholar.
4. The exact name of School and County from which sent.
5. Essays must be sent to the Education Department, UNDERWOOD & UNDERWOOD, LTD., 104 High Holborn, London, W.C.1., not later than December 5th.

In addition to prizes to the winning Essayists,

**THE WINNING SCHOOL IN EACH COUNTY,
also THE WINNING COUNTY,**

will be presented with valuable **UNDERWOOD STEREOSCOPIC EQUIPMENT.**

TOTAL VALUE OF PRIZES, £397.

The Judging will be by competent Educationists in conjunction with the Education Department of UNDERWOOD & UNDERWOOD, LTD.

A MESSAGE TO VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume—are continually provided by us.

We would welcome your inquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

NEW GEOGRAPHY AND HISTORY BOOKS.

The Book that EXPLAINS the New Map of Europe.

Aftermath: A Geographical Study of the Peace Terms. By M. I. NEWBIGIN, D.Sc. Illustrated with 15 Maps. 5s. net. Cheap Edition, 3s. 6d. net.

This book is exactly what is required by Geography Teachers and all those interested in international relations, who wish to understand the many changes made since the War in the Map of Europe and of the World—why they were made, and what is likely to result from them. Dr. Newbigin is a recognized authority of Geographical subjects.

A New Elementary Geography of Scotland.

Scotland. (Preparatory Atlas Geographies Series.) By T. S. MUIR, Geography Master, Royal High School, Edinburgh. With 13 Maps. Manilla Covers, 1s. net. Limp cloth, 2s. net.

It may fairly be claimed for this new Geography of Scotland that it is comprehensive, accurate, full of ideas, and, above all, interesting.

Second Edition, Revised and Largely Rewritten.

Ordnance Survey Maps: Their Meaning and Use. By M. I. NEWBIGIN, D.Sc. 2s. net.

Reviewing the First Edition, the *Educational News* said: "For such a volume as this, teachers have waited long. Miss Newbigin shows teachers and students alike what they may learn from these Maps, and makes many extremely useful observations on their educational purpose."

Historical Geography of Britain and the British Empire. By T. FRANKLIN. Book I, The Making of England; The Making of Empire; The Establishment of Empire. B.C. 55 to 1815. Book II, The Expansion and Consolidation of the British Empire. 1800 to the Present Day. 2s. net each book.

The Times Educational Supplement.—"Careful, well balanced, and attractive."

The Edina Histories. In Six Books. By A. L. WESTLAKE, B.A., and T. FRANKLIN. Illustrated with Maps. 1s. 4d. net each.

The Journal of Education.—"These little books represent a marked advance in historical primers for elementary schools."

NEW ATLASES AND MAPS.

Multum in Parvo Atlas of the World. New Edition with Peace Treaty boundaries. Containing more than 100 Maps and Plans and full Geographical Index. 3s. 9d. net.

World-wide Atlas. New (Peace Terms) Edition. 128 pages of Maps and full Geographical Index. 15s. net. Very suitable for School Libraries.

"O.R.E." Atlas. Part I, British Isles. Part II, Europe. 1s. 6d. net each.

The first two parts of a new Orographical, Regional, and Economic Atlas, making available for schools just the maps actually required for the region under study without purchasing a complete atlas.

New Indian History Maps.

India in 1784. To illustrate the Time of Clive and Warren Hastings.

The Growth of British India during the Nineteenth Century.

Size 30×40 inches each. Beautifully lithographed in Colours and strongly mounted. 7s. 6d. net each, on Cloth and Rollers, Varnished, or Mounted on Cloth to fold in sections, and eyeletted.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

"I am extremely sorry the advertisement could not be printed in last month's issue, as we generally have such good results from your paper. Kindly insert it in next month."

MATRICULATION AND OTHER EXAMINATION NOTICES, SCHOLARSHIPS, FELLOWSHIPS, STUDENTSHIPS, and BURSARIES.

BEDFORD SCHOOL.—Head Master: REGINALD CARTER, M.A. An Examination will be held at Bedford in March 1921, for 4 Exhibitions £50-£40, and 6 Nominations £10-£20 for Boarders, and 4 for Day Boys. Apply for particulars to—HEAD MASTER, Bedford.

OLD BEDFORDIAN WAR MEMORIAL EXHIBITIONS.—Seven Exhibitions are offered to Sons of Old Bedfordians on certain conditions. For particulars apply—HEAD MASTER, Bedford School.

BLUNDELL'S SCHOOL, TIVERTON.—Six FOUNDATION SCHOLARSHIPS, including two of £60 a year, are competed for annually at the end of May. Candidates must be between 13 and 14 years of age on May 1st. The names of candidates must be sent in before May 20th to the HEAD MASTER, from whom entry forms and full particulars can be obtained.

BRIGHTON COLLEGE.—An Examination will be held in June, 1921, to elect to EIGHT SCHOLARSHIPS varying in value from £60 to £45 a year. Full particulars on application to the HEAD MASTER.

CHELTHENHAM COLLEGE.—An Examination for 12 ENTRANCE SCHOLARSHIPS (not open to boys already at the College, Senior or Junior) will be held at Cheltenham on May 24th and 25th, 1921. In addition there will be awarded a SCHOLARSHIP confined to sons of R.A.M.C. Officers, preference given to sons of Officers killed in action during the late War. Particulars may be had from the BURSAR.

CRANBROOK SCHOOL, KENT.—Head Master, Rev. C. F. PIERCE, M.A. — EXAMINATIONS for ENTRANCE SCHOLARSHIPS and EXHIBITIONS are held in March, June, and November. For particulars apply to the HEAD MASTER, The School House, Cranbrook, Kent.

SCHOLARSHIPS.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College and Manufacturing Works are held annually in April. For particulars apply to ACTING SECRETARY, 66 Southampton Row, W.C.1.

FRAMLINGHAM COLLEGE, SUFFOLK.

PUBLIC SCHOOL, Incorporated by Royal Charter. Head Master: F. W. STROCKS, M.A.

Inclusive Fees, £57 to £66 per annum. Modern Laboratories and Workshops.

EXAMINATION for ENTRANCE SCHOLARSHIPS in March.

Illustrated prospectus and full particulars on application to the HEAD MASTER or the SECRETARY.

Guild of Education as National Service.

HALSEY TRAINING COLLEGE, recognized by Board of Education.

Scholarships are offered from January next to students with degree, Oxford Higher Local Exam., Cert., or other examination accepted by the Board of Education, for a One Year Training Course.

(a) One scholarship of £20.

(b) Twelve of £15.

For anyone who intends to teach in the New Day Continuation Schools—with the Board of Education grants of £20, towards tuition fees, and £15 (men £20) for maintenance—this means a total assistance of £50 women (men £55) towards the expenses of the Course.

For prospectus, &c., apply to The Principal, Miss MARGARET FRODSHAM, 11 Tavistock Square, W.C.1.

KENSINGTON HIGH SCHOOL
(G.P.D.S.T.)

MUSIC TRAINING DEPARTMENT.

Admission in September, January, and May.

THREE SCHOLARSHIPS awarded annually.

For information apply to the HEAD MISTRESS, Kensington High School, St. Alban's Rd., Kensington, W.8.

KING ALFRED'S SCHOOL, WANTAGE.

Head Master: K. A. R. SUGDEN, M.A. (Formerly Demy of Magdalen College, Oxford; till July, 1919, Sixth Form Master and House Master at Rossall School.)

Three or four Scholarships of £30 per annum will be offered for competition in July, 1921. Also One House Exhibition of £15 on the Common Entrance Examination each term.

For place of Examination, and full particulars of the former, apply to HEAD MASTER.

One of the smaller Public Schools, of ancient foundation and endowment, with moderate fees (about £75 per annum). It is on the edge of the Berkshire Downs, 2½ miles from Wantage Road Station (main line of G.W.R.), 60 miles from London, 14 from Oxford.

KING'S SCHOOL, CANTERBURY.—ENTRANCE and KING'S

SCHOLARSHIPS. Some FIFTEEN SCHOLARSHIPS each June and November. For particulars apply to Head Master—A. LATTEY, M.A.

LANCING COLLEGE, SCHOLARSHIPS.—Entrance Scholarships will be offered for competition in last week of May or first week in June. Candidates must be over twelve years of age and under fourteen on June 1st.

(a) Six Scholarships (at least), Classical and Modern, varying from £100 to £50 per annum, as at present arranged.

(b) Two Choral Exhibitions of £30 per annum open to all boys who can sing and read music.

Full allowance in all cases will be made for age. Candidates will be examined at Lancing, unless further notice is given to the contrary.

For Prospectus and all additional information, apply to the Head Master, Rev. H. T. BOWLEY, Lancing College, Shoreham, Sussex.

NEWNHAM COLLEGE.—NINE SCHOLARSHIPS, one of £60, and others of £30 and £35, are offered in March on the results of a joint examination with Girton College. A certain number of EXHIBITIONS may also be awarded. Particulars can be obtained from the PRINCIPAL.

SEDBERGH SCHOOL

THE Examination for Ten ENTRANCE SCHOLARSHIPS and EXHIBITIONS will be held during May or June, 1921, in London and Sedburgh simultaneously. Candidates must be under 14 years of age on January 1st, 1921.

For further information apply to—THE BURSAR, Sedburgh School, Yorkshire.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships and Exhibitions, varying from £50 to £15, is held annually in May. General knowledge is required in preference to specialization in one subject. Exhibitions also awarded on the Common Entrance Examinations.

Further details from—

S. M. TOYNE, M.A., Head Master.

ST. BEES SCHOOL, CUMBERLAND. The next examination for Scholarships (value £66 and £50), and for places on the Foundation (value £20), will be held early in March, 1921. For particulars apply to THE SCHOOL SECRETARY, St. Bees, Cumberland.

ST. JOHN'S SCHOOL, LEATHER-

HEAD.—In addition to sons of living clergy elected on the Free Foundation, Supplementary Foundationers (sons of living clergy only) are received at the annual fee of 40 guineas. The School is also open to sons of Clergy or Laymen paying full fees, viz., Clergy 80 guineas, Laymen 80 guineas per annum. Day-Boys 33 guineas per annum. Modern School buildings for 240 boys. Boys prepared for the Universities, Army and Civil Service Examinations, &c. Leaving Scholarships. One or two Albany Scholarships awarded each year. Also three Entrance Scholarships, value £40, £30, and £20 per annum. Scholarship examination for 1921 on the first Wednesday in July; entries close the last day of June. For Prospectus, &c., apply to the Head Master, the Rev. E. A. DOWNES.

WESTFIELD COLLEGE (UNIVERSITY OF LONDON).

Chairman of Council:

The Rev. Canon TEMPLE, D.Litt.

Principal: Miss B. S. PHILLIPPS, Litt.D., F.R.Hist.Soc., O.B.E.

Students are prepared for the Arts and Science Degrees of the University of London; there is also a two years' course in Citizenship, for which a College Diploma is awarded.

Fees. — Residence £90 a year; Tuition from 38 guineas a year.

A certain number of Scholarships of from £60 to £30 a year for three years are offered for competition at an Examination held annually in April.

For Calendar and further particulars apply to the PRINCIPAL, Westfield College, Hampstead, N.W.3.

WEYMOUTH COLLEGE.

SIX SCHOLARSHIPS for CLASSICS or MATHEMATICS,

of the value of £20 downwards, and open to boys between twelve and fourteen,

are offered annually for Competition.

Next Examination will be in June, 1921.

For Prospectus and other information apply to the HEAD MASTER.

MENTHOLIN PASTILLES

4 oz. post free 3/-.

Sample oz. post free 10d.

W. STEWART ADAMSON, Pharmacist,
3 LUDGATE BROADWAY, E.C.4.

NATIVE FRENCH MASTERS

AND MISTRESSES AND FULLY QUALIFIED French teachers of British nationality seeking appointments should apply to the National Society of French Masters (most reasonable terms), Sackville House, 7 Red Lion Square, W.C.1.

MISS DYPHNA SMITH'S

EDUCATIONAL DEPARTMENT, 231 Ebury Street, S.W.1.—Principals needing good ASSISTANT MISTRESSES, now or in the future, should apply The REGISTRAR, as above. Private Governesses also supplied. (Miss Dymphna Smith interviews applicants personally, 11 to 1, or by appointment.)

See also pages 772 and 773.

TEXT-BOOKS FOR JUNIOR AND SENIOR FORMS.

PUBLISHED AT THE

University Tutorial Press.

MATHEMATICS AND MECHANICS.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**
"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **7s. 6d.**
"An excellent production which should win for itself wide and permanent recognition. The chapters dealing with graphs are excellent."—*Schoolmaster.*

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **6s. 6d.**
"As a school textbook this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette.*

Arithmetic, The Tutorial. By W. P. WORKMAN, M.A., B.Sc., late Head Master of Kingswood School, Bath. *Third Edition.* With or without Answers. **6s. 6d.**
"Destined to supersede all other secondary treatises on the subject."—*Westminster Review.*

Arithmetic, The Junior. By R. H. CHOPE, B.A. With or without Answers. *Third Edition.* **4s.**
"No better Arithmetic for school work has come into our hands."—*Educational News.*

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. **4s. 6d.**
Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.
"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World.*

Arithmetic, Rural. By A. G. RUSTON, B.A., B.Sc. **5s.**
"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education.*

Book-keeping, Practical Lessons in. By T. C. JACKSON, B.A., LL.B. *Fourth Edition.* **5s.**
"A well-arranged and well-explained treatise."—*Educational Times.*

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. **4s.**
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. *Second Edition.* Enlarged. **6s.**
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World.*

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **5s.**
Covers fully the syllabus for London University Matriculation.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. **1s. 9d.**
"The explanations are remarkably clear."—*Secondary Education.*

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Second Edition.* **3s.**
"An excellent textbook."—*The Journal of Education.*

Mathematics for Technical Students, A First Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition.* **3s.**
"The authors have succeeded in creating a 'workshop atmosphere' around this elementary course."—*Nature.*

Mathematics for Technical Students, A Second Course in. By P. J. HALER, M.B.E., B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. **6s.**
A course of work in Mathematics suitable for the second and third years' work on lines similar to the First Course in Mathematics for Technical Students by the same authors.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. **4s.**

Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Third Edition.* **5s.**
"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. **4s.**
"The examples given are numerous in each chapter, the diagrams and the arrangement practical."—*Secondary Education.*

BOTANY, CHEMISTRY, PHYSICS, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. **4s.**
"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*
"Combines observational and experimental work with textbook instruction in a judicious fashion."—*Preparatory Schools Review.*

Botany, Senior. By FRANCIS CAVERS, D.Sc. **6s. 6d.**
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* **4s.**
"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. *Second Edition.* **6s. 6d.**
"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian.*

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. **4s.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. *Second Edition.* **3s.** ADVANCED COURSE. **1s. 9d.**
"The calculations which are inseparable from chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge.*

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. **3s.**
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s. 6d.**
"The information is accurate and up to date."—*The Journal of Education.*

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. *Sixth Edition. Revised and Enlarged.* **4s.**
"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **4s.**
"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. **5s.**
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature.*

Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. **2s. 3d.**
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News.*

Science, Junior Experimental (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* **4s.**
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **6s.**
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature.*

Sound and Light, Junior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s.**
"Reaches a high standard, with plenty of practical work."—*Guardian.*

INDEX.	

OCCASIONAL NOTES.

THE Head Masters' and Head Mistresses' Associations, being only slightly affected by the "Burnham" Report on salaries in secondary schools, will naturally desire that it shall be accepted. Criticism and opposition, therefore, come from the assistants. The mistresses consider that the minima, particularly in the case of non-graduates, are too low, and many of them are disappointed that the principle of equal pay has not been accepted. Neither mistresses nor masters consider that the maxima of the scales are sufficiently high to meet present economic conditions, and they find it difficult to believe that these conditions will be ameliorated during the period of the truce, which is itself considered too long; indeed, they fear that, if there is a further rise in prices, the provisions for scale revision will be of little value. Very many masters are strongly opposed to the £50 for a good Honours degree. The policy of their Association is that there should be a single, economically adequate, scale upon which special qualifications of all kinds should be recognized by the placing of assistants at correspondingly higher points than the minimum. They believe, too, that where the cost of living is above the average, as in many industrial areas it undoubtedly is, it should have been met by *local* additions to the normal scale.

THERE is an almost universal belief among the assistants that the present financial needs of both men and women warranted a full and immediate "carry over." Authorities may, and some undoubtedly will, grant this; but where it is not given there will continue to exist a very genuine feeling of dissatisfaction. There is also disappointment that so many of the recommenda-

tions are permissive rather than compulsory, and a consequent fear that varying treatment will be accorded by different authorities in exactly similar cases, which will continue the very anomalies and injustices that the Report was expected to remedy. Many doubt whether the Reference Committee can satisfactorily settle the numerous matters that lie within its purview. However sound such arguments as these may be, it must not be forgotten that the Report itself is a compromise, the result of negotiations between employers and employed, the former holding the purse-strings, and as such was certain to be open to criticism. Even as it is, many rural authorities will have had some difficulty in persuading their finance committees to accept it. That the Report, with all its shortcomings, has been recommended to their members for acceptance by the executives of all the four secondary associations who represent the teachers concerned is the strongest argument that it was, on the whole, the best that could be obtained. The choice lies between what is, after all, a national solution and the chaotic conditions of the past; for this, if for no other reason, it should be accepted.

MR. FISHER'S address to the members of Parents' Associations, and other parents of children in elementary schools in Brighton, on November 5, gave official recognition to the interesting experiment which the Brighton Education Committee initiated some two years ago. Acting on the hint given in the Education Act for the consultation of parents in educational matters, the Committee have formed Parents' Associations in connexion with the elementary schools, and the scheme has now passed the experimental stage. The associations have discussed matters affecting the particular schools and the general educational work of the town, and have elected representatives to sit on the Boards of Managers and the Care Committees of the schools. Steps are now being taken to form a Central Committee of delegates from the various associations, which will, in turn, nominate representatives to sit on sub-committees of the Education Committee, and good results are already being shown from the awakened interest of the parents, which is for the first time becoming articulate. The success varies from one association to another, depending to a large extent on the interest of the teachers and a few of the parents; but there is no doubt that the scheme shows promise of tapping a fruitful source of latent power towards educational progress. There has been an outburst of enthusiasm for education among the working classes, largely due, as Mr. Fisher said in his speech, to an increased appreciation of the value and power of the educated man. The Brighton plan seems to offer a simple method for bringing the parent into sympathetic and close touch with educational administration, and there are already associations being formed elsewhere, though they have not received the same official recognition as in Brighton.

IN our issue for November we remarked that the supply of candidates for the teaching profession, in all its grades, is notoriously deficient, and that the means of training them are gravely imperilled, some of the voluntary training colleges being on the brink of bankruptcy. Since then, a case in point, that of the Saltley Training College

for men teachers, has been reported by the Birmingham papers. Before the war the number of students was 110, about fifty-five being admitted annually. At present there are only forty-five first-year men, and there is a marked falling off in the number of applicants for next year. Moreover, the accounts for the year ended July 1920 leave the governors faced with a deficit of £4,000. We give these details because it is to be feared that the case of Saltley is not exceptional, but typical. We repeat that the Board and the local authorities ought to be using every means in their power to increase the supply of teachers, especially of men. It is equally clear that, if the voluntary colleges are to survive, the State must speedily come to their financial rescue. Their disappearance would be a serious loss, not only to the Churches, but also to the State. Of course, if greater financial assistance is to come from the State, there must be an attitude of "give" as well as "take" on the part of the Churches. But, in the present temper of the Churches, there ought to be little difficulty in this respect.

THE Board of Education have just issued, as one of their Educational Pamphlets, "An Account of Some Experiments in the Teaching of Science and Handwork in certain Elementary Schools in London." The old courses

Science and Handwork.

in science have long fallen into disfavour, partly because of the increased attention given to Nature-study during the last twenty years, and partly because the academic study of chemistry and physics was felt to be unprofitable for children who left school at fourteen. Moreover, as we recently pointed out in connexion with the Board's Circular 1177, the older handwork schemes were unsatisfactory because of their formal and imitative character and their isolation from the rest of the curriculum. The experiments now offered for consideration refer to the use of a workroom in a boys' school, and the teaching of science to boys in a central school and in certain elementary schools. The value of such records lies a good deal in the fact that they show what actually has been done, and, therefore, what can be done, to overcome the difficulty of keeping large classes well employed—a difficulty that arises in an acute form when "chalk and talk" are put aside and individual practical work begins. Other points of interest are the possibilities of a scheme of "every-day science," and the success achieved by the use of simple tools and materials. We hope the pamphlet (which costs a shilling) will be widely read by teachers of science and handwork.

WE have received a memorandum from the War Office concerning the Territorial Cadet Force. While we welcome, both on educational and on patriotic grounds, the intention of the authorities to extend their support to this branch of training, we must confess to a feeling of apprehension that it comes too late. Some schools have maintained a cadet corps for many years, at first with no recognition at all, afterwards, in 1910, with some half-hearted support from the Army Council. When war broke out, numerous schools and other organizations took up the movement with enthusiasm, but found little encouragement and many obstacles in their path. No doubt the War Office had its hands too full to give the movement the support it deserved;

Territorial Cadet Force.

nevertheless, the backing now offered would have been far more effectual three years ago. Since the conclusion of the war, many cadet corps have been disbanded, or are rapidly approaching that state, the prevailing causes being apparently a sense of anti-climax on the part of the cadets and of despair in their struggle against difficulties on the part of those responsible for the maintenance of the corps. Had these tendencies been foreseen and met without delay, the resulting disintegration would have been arrested. We hope that the present announcement may even yet be in time, and prove to be the precursor of others which will assure to the movement, not only adequate financial support, but a hearty and direct encouragement of all cadet corps by the officers commanding the various districts.

AN interesting scheme for the interchange of English and French pupils has lately been considered by the Bradford Education Committee. The scheme has two main objects: to improve the pupils' knowledge of French or English and to afford them opportunities of becoming acquainted with the ideas and customs of, and so contribute to the development of a better understanding between, the two countries. It is proposed that the pupils' stay in France should extend from the beginning of the summer holidays over the whole or part of the school year; they would thus have an opportunity during the holidays of becoming more widely acquainted with French social life, apart from scholastic routine, while during the school terms they would be pursuing their regular studies. It is proposed also that the interchange of pupils should be (1) between French and English schools of the same type and of equal importance, and (2) between families of analogous social conditions. The pupils from Bradford would be between fourteen and eighteen years of age, and would be drawn from the secondary schools, the technical college, and the School of Arts and Crafts. The attitude of the French Ministry of Public Instruction towards the scheme is wholly favourable, and the Board of Education have promised that any pupils from English schools taking part in such an interchange would be considered as being on the registers of their own schools. Thus the only expenses involved in the proposal are the pupils' travelling expenses. The suggested arrangements seem to possess the merits of simplicity and practicability, and similar experiments that have already been made, as well as the favourable attitude of the Board of Education and the Ministry of Public Instruction, promise well for the ultimate success of the scheme.

Interchange of English and French Pupils.

A PARAGRAPH has gone the round of the papers in which it is stated that the girls in mixed schools obtain better results in the London General School Examination than those in schools for girls only, this conclusion being based on certain statistics that appeared in the *Middlesex Schools Gazette*. Statistics

Girls and Examination Results.

are dangerous things, and, before such a general assertion can be based on them, it is important to make sure that the materials from which the statistics are drawn are ample. In this case the statistics refer to the performance of ten mixed and nine girls' schools, on one occasion; and they have led to such inferences as this—that in mixed schools there is undue pressure on the

girls. Closer inquiry would suggest that there may be special reasons for this year's results. War-time conditions have affected some schools more than others, and they render this a time at which statistics are peculiarly untrustworthy. In another county, at the same examination, the ten girls' schools, as a whole, showed better results than the ten boys' schools: is it a legitimate inference that girls are more intelligent than boys? Some of the Middlesex girls' schools have had a bad year, and most of the mixed schools have maintained their usual high standard: that is all that can fairly be said. When times are normal and we have statistics covering a series of years and a large number of schools, we may be justified in comparing the examination results of girls in the two types of schools and in drawing conclusions. Perhaps there will then be no conclusions to draw.

THE proposal of the Bishop of London's Commission (April, 1920) to demolish nineteen City churches aroused the serious attention of the London

The Condemned City Churches.

County Council. They instructed their clerk and their architect to inquire into the matter and report. The results of their joint investigations lie before us in a most interesting and instructive pamphlet (L.C.C. Publications, No. 2,046, P. S. King & Son, 3s. 6d.). They survey the history of the City churches as a whole since the Great Fire, and they give a summary of the record of each of the nineteen condemned edifices. Their report is prefaced by an illuminating plan of ecclesiastical London, and it is adorned by twenty-four excellent full-page plates. It is curious to find the secular authority pleading for mercy on behalf of churches doomed to destruction by an episcopal commission. The explanation, however, is not far to seek. The Bishop wants money which the sites of the churches would bring to him in large quantities: land in the neighbourhood of the Bank has recently been selling at £130 per square foot. The L.C.C. wish to preserve the monuments of historic antiquity in so far as they can do so without expense to themselves. They will probably find, however, that, if they wish to save the churches, they will have to be prepared to assist in maintaining them as archæological relics.

IT appears from this report that at the time of the Fire in A.D. 1666 there were 107 City churches. Of these, eighty-six were burnt down. Only fifty-one of

Historical Associations.

them were rebuilt; so that when the work of restoration was complete there were seventy-two churches in all. During the eighteenth and nineteenth centuries twenty-three of the seventy-two were demolished, leaving at the present time but forty-nine. It is proposed to sweep away nineteen more, thus reducing the number to thirty. Many of the condemned nineteen are churches of great architectural and historic interest. No fewer than twelve of them are the work of Sir Christopher Wren. All of them have associations with men of note. For example, Pearson's famous "Exposition of the Creed" was first propounded in St. Clement, Eastcheap, and Purcell was organist there; Cardinal Morton was at one time rector of St. Dunstan-in-the-East, while St. Dunstan-in-the-West echoed to the voice of William Tyndale; Miles Coverdale was for some years incumbent of St. Magnus the Martyr, within whose walls his bones repose; Milton

was married at the church of St. Mary, Aldermanbury, and Judge Jeffreys, a parishioner, was ultimately buried there; Edward Young, author of "Night Thoughts," was married in St. Mary-at-Hill; Robert Herrick was baptized in the church of St. Vedast. Such are some of the links with the past that seem likely to be broken. There can be no doubt that the demolition of these churches would be a grave loss to the architectural treasures of the City, and a serious diminution of its amenities. It may well be that the migration of the population has made it unnecessary to maintain these venerable buildings as places of worship. It is nevertheless earnestly to be hoped that the City Corporation and the County Council may combine to preserve them as monuments and memorials.

IN a report of the Special Schools Sub-Committee of the City of Birmingham Education Committee, there is an interesting account of an experiment to provide a Summer School for defective children.

A Holiday School.

A house was taken for three months at Barmouth, and batches of twenty children were drafted there at fortnightly intervals. The school appears to have been admirably and sympathetically organized, and it is reassuring to know that the time-table was of an elastic character. It would not have been an educational calamity if, during the fortnight, the unfortunate children had been taught only to enjoy themselves. We are glad to be told "that the happy, home-like feeling of the house was a revelation to many children, while the beauty of the country will be an inspiring memory." It is also gratifying to know that the children increased considerably in weight. One group gained an average of two and three-quarter pounds in a fortnight; the two highest individual records being over five pounds each. "The improvement in the general physical condition of the children was most remarkable; even those groups which had indifferent weather returned looking fresh and healthy, while hair and eyes seemed to have caught on a new light." The total cost of the twelve weeks was £417, the voluntary contributions of parents amounting to £62, leaving the net cost at £355, an average of £5 for each child. This expenditure was, we have no doubt, a good investment.

SINCE 1913-14 there has been a very considerable development of secondary education in the West

Secondary Education.

Riding of Yorkshire, the number of pupils having increased from 5,845 to 9,277. Including those who are attending schools in county boroughs, the total number of children receiving secondary education now represents 9.1 per thousand of the population. This is a high figure for an industrial area. The number of fee-paying pupils was 61.3 per cent. as compared with 53.7 per cent. in 1913-14. The report contains interesting graphs showing the ages of pupils in secondary schools and the length of their school life. Assuming a five years' course, pupils of the age of fifteen in a secondary school should represent about 20 per cent. of the enrolment. In the West Riding it is 9.3 per cent. The corresponding figure at the age of sixteen is 5.3 per cent. Regarding the duration of school life, 19 per cent. of the pupils remained for under two years and 21 per cent. under three years, and from that period the graph rapidly descends. It appears to be

demonstrated by these statistics that many of the pupils who find their way into secondary schools could be equally well, and less expensively, provided for in higher elementary schools. It would add to the value of the graphs and tables if a distinction was drawn between boys and girls and between "fee-paying" and "free" scholars.

IF day continuation schools for all young persons are to be established as a permanent development of educational reorganization, the co-operation of the employers, large or small, will be essential.

Employers and Education.

Under the Statute such co-operation is, within limits, compulsory. Whether, however, it should take the form of paying for a week of, say, thirty-six hours' work the same wage as would be paid for a week of forty-four hours is another question. It is one in which the man in the street is as much interested as the man who pays the wages. The public demand a reduction in the price of commodities; the price is regulated by the cost of production, which, in its turn, is largely determined by the wages of labour. It may be a sound policy economically, as it certainly should be socially, for young persons during working hours to be compelled to attend continuation schools; but if, while they do so, employers are to pay the trade union rate of wages, do not let us be under any illusion as to the ultimate destination of the impost. The burden will fall upon the consumer.

THIS reflection was provoked by the report of a Conference between representatives of the Kent Education Committee and a number of the larger employers of labour in that county, which the

In Kent.

Director of Education has been good enough to send us. The explanation of the provisions of the Act and the scheme of the Committee were doubtless both necessary and useful. It was, however, to the views of the employers that we turned with some anxiety. Fear was expressed by one of them that the enforcement of the Act would mean the exclusion from his works of all young persons between the ages of fourteen and sixteen years. Another regarded the question of the payment of wages to the young people while attending school as one which should receive careful consideration. Finally, a representative of the Central Committee of the Federation of British Industries announced that, on the question of school hours and payment in respect of time spent in school, the Federation would make a pronouncement in due course.

THE Board of Education have already very properly directed the attention of local education authorities to the injury and waste caused by so many secondary school pupils leaving school before they

Warwickshire.

are sixteen years of age, and have intimated that grants-in-aid of such pupils may be jeopardized. The Warwickshire Education Committee believe that the early withdrawal of pupils is mainly due to the attraction of high wages. It is also due, we think, to the fact that parents are encouraged to send their children to secondary schools without being made to realize the responsibility associated with the privilege. The Warwickshire Committee think that the trouble may to some extent be overcome by the award of maintenance grants, and that "it depends a good deal on the value of the education given

at the secondary schools." The effect of the Board's proposal, it is said, would be that some of the schools would lose half their grants, and would in consequence have to reduce their staff, with disastrous effects in the teaching. The value of the education given in a secondary school, from the point of view of the working-class parent, is measured by its results in improving wage-earning capacity. At the present time manual labour is highly paid and the reward likely to be obtained by boys and girls as the result of further educational attainment is largely speculative.

REGARDING the transfer of responsibilities for agricultural education to the new county committees for agriculture, the Director of Education for

Agricultural Education.

Worcestershire has prepared a return which will be of value to Local Education Authorities. Of fifty administrative counties, supplying information, half have decided to make no change, and the moiety is almost equally divided between those who have determined to transfer the whole or part of agricultural education to the new committee and those who have not, as yet, taken any action in the matter. With few exceptions, the authorities who do not favour transfer include the more important agricultural counties, such as Bedfordshire, Berkshire, Cambridge, Cheshire, Cumberland, Derby, Devon, Dorset, Durham, Gloucestershire, Hereford, Kent, Lancashire, Middlesex, Notts, Somerset, Stafford, and Warwick. As we have stated on a previous occasion, we are of opinion that it is a mistaken policy for any county area to have two executive bodies responsible for education. Any argument advanced for the separation of agriculture from the general service of education would be equally applicable to any other industry, such as engineering, shipbuilding, or mining. We regretted the transfer of responsibilities from the Board of Education to the then Board of Agriculture (which was entirely contrary to the spirit of the Board of Education Act of 1899) and we have seen no reason to modify our views. It is too late for the mistake to be repaired, but it is not too late to avoid some of its consequences.

SCHOLARSHIPS AND FREE PLACES IN SECONDARY SCHOOLS.*

THE Education Act of 1918 aims at "the establishment of a national system of public education available for all persons capable of profiting thereby," and it requires the local education authority in drawing up its scheme to make adequate provision that children and young persons should not be debarred from receiving the benefits of any form of education by which they are capable of profiting through inability to pay fees. The Committee, whose report lies before us, were appointed in October last, to make recommendations with the view of making higher education "more generally accessible and advantageous to all classes of the population."

The Committee open with a brief historical retrospect of the growth of the scholarship system. Beginning with private benefaction the work has now devolved on the new educational authorities. The result is that, whereas in 1895, the Royal Commission found the number of scholarships provided by local authorities and tenable at secondary schools was less

* "Report of the Departmental Committee on Scholarships and Free Places," pages vi + 82, Cmd. 968. Price 9d. net. (London: H.M. Stationery Office.)

than 2,500, that number had increased in 1906 to over 12,000, or including intending teachers to 23,500, and at the present day there are, in the grant-aided secondary schools, 53,460 scholars holding free places awarded by local authorities, 16,548 awarded by school governors, and 2,378 by other endowments, making a grand total of 72,386. The system is characteristically English, for it shows two different systems existing side by side in the same institution, education which is fee-paying and education which is free. But the widening channel of free secondary education, the abolition of secondary school fees in Sheffield, Bradford, Manchester, and for continuation schools everywhere, is proof positive that the greater accessibility of the secondary schools corresponds to a deep-seated national need, and this is at the same time a promise and a pledge of future national progress.

Indeed, if the nation had not felt that it was worth while, it would have been impossible to make the system work. It is really a national system worked partly by local authorities and partly by independent schools and between the three partners, the Board, the local authorities, and the independent schools, there is very imperfect co-ordination. Consequently, grave defects have discovered themselves in the present arrangements. The free place is only a free place, and many homes cannot face the cost of maintaining the child and providing books, and all the other etceteras of higher education, until sixteen years of age. The financial burden on the independent schools is also a serious matter, especially in view of the increased expenditure on salaries. Further, where the authority holds one examination for selection, and various independent schools in the same area hold their separate examinations, anomalies are bound to occur, and pupils will be accepted at one school who are of less ability than those accepted at another. Lastly, a "free placer" whose parents migrate to another part of the country more likely than not fails to secure a free place at his new school, and, consequently, the promotion of the father often means that the son loses his chance, and, if his father is a Methodist Minister, the son often loses his chance without any financial benefit accruing to the parents.

This is the position to which the Committee address themselves. Starting from the assumption that the new Act "effects a revolution and looks forward to a new order," they set themselves to plan the broad highway along which the new order must advance. The free place arrangements can no longer be based on a limited percentage of school places, but must be based on the number of children "capable of profiting." How many are these? Assuming that 75 per cent. of the children are of this category, the nation would have to provide accommodation for upwards of 2,250,000 children; that is, even limiting the course to sixteen years of age. At the present time there are 300,000 in the grant-aided secondary schools of England and Wales. Such more than seven-fold expansion is clearly not feasible at the present time. Taking another line of assessment and assuming that the secondary schools should provide for 20 per 1,000 of the population, an estimate which is roughly double of the present figure in Wales, this would mean 720,000 children in secondary schools as against 300,000 at present. This is the number which the Committee adopt for the purposes of the immediate future, and, as the first step towards attaining it, recommend that the percentage of free places be increased from 25 to 40. In practice, this would give us a percentage of 50 per cent. of free-place holders in the schools, for experience proves that they tend to stay at school longer than other pupils.

Such an increase of free-place provision would give the death-blow to many old foundations and other independent schools. They have not the financial resources to cope with it. The Committee advise that the local authority shall undertake the whole financial responsibility for the free-place holders in their area. This would exactly reverse the present situation. As things are, the responsibility is the school's, and the authority helps the school to fulfil its obligation. Under the proposed scheme the financial responsibility is the authority's, and the school endowments will help them to discharge it. At the same time, other advantages would accrue.

There would be the one examination for the whole area; there would be uniformity of standard; the administration of maintenance grants would be in the same hands, the migration muddle could be more easily straightened out, the parents' liberty of choice could be safeguarded in the same way as at the entrance scholarship examinations of grouped colleges at Oxford or Cambridge, for each candidate in filling up his form would express his order of preference.

With regard to transfer from primary school to secondary, the Committee recommend eleven plus as the best age; by that age a child should have sufficient facility in reading and writing and sufficient concentration and logical power to enable the examiner to judge of his fitness. As to the method, the Committee, after considering the methods of nomination, school record, and psychological tests, express themselves as follows:—"No evidence we have heard has shaken our conviction that under existing conditions the advantages of a well conducted examination outbalance its occasional mistakes." That examination should have three parts. First should come a qualifying examination: all children of eleven plus in every public elementary school, unless ruled out by the lowness of their standard, should be examined by their own head teacher. Those attaining a certain percentage of marks should have a further examination of increased difficulty ("in arithmetic the questions should mainly take the form of problems"). Those who pick themselves out on this second part of the examination should be examined orally: "an average of fifteen minutes must be allowed for each candidate." This would furnish the main supply, but the Committee wisely provide for the exceptional case of illness, or retardation, or late development.

This portion of the report will challenge criticism. A minority, whose names command the greatest respect, demur to what they regard as the reintroduction of the discredited system of external examination in the elementary schools. "We hold strongly the view," say the dissentients, "that the ideal test for admission to a secondary school is the satisfactory completion of the normal course in the primary school." And it does seem more than likely that within a few years the primary course may end for all at the age of twelve, and each child may pass on to some after course of one kind or another, for not less than another three years' course.

The Committee have also come to the conclusion that, though it is not feasible at present, the balance of advantage is on the side of free secondary education, and recommend this as "a prospective policy." Only one member of the Committee, Sir Mark Collet, records his dissent from this conclusion. They recommend further that there should be a great increase of maintenance allowances, increasing in amount from year to year, not calculated as an equivalent to possible earnings, but sufficient to feed and clothe the school child and enable him to take his full part in school activities. The parent should make some sacrifice, for no scheme, however generous, will succeed unless the home is convinced that education is worth while for its own sake, not because of the increased pay which educated people can command, but because education adds value and significance to life, both individual and collective. "Civilization," say the Committee, and their words are worth noting, "seems to suffer at the present time from a lack of the broad and humanizing ideas that form the basis of enlightened citizenship. We do not see where those ideas can be sown, or how they can develop to vigorous life, unless the greatest possible number of the intelligent children of the nation, whatever their means, secure liberal education during the period when their minds are most open to the influence of high and generous ideals and are most powerfully affected by them."

THE FRENCH INSTITUTE.—Popular lectures in French, open free to the public, are being given at the French Institute, 1-7 Cromwell Gardens, Kensington, S.W., on Thursday evenings at 6.15 p.m., and on Saturday afternoons at 3 p.m. Copies of the Syllabus can be obtained on application to the Secretary.

SECONDARY EDUCATION IN WALES.

By Prof. WILLIAM PHILLIPS,

Professor of Education, University College, Cardiff.

AS is pointed out in another part of this issue, the President of the Board of Education in July, 1919, appointed a committee of eleven to inquire into the organization of secondary education in Wales and to advise how it might be consolidated and co-ordinated with other branches of education with a view to the establishment of a national system of public education in Wales. The committee, of which the Hon. W. N. Bruce was chairman, have just issued a carefully considered, moderately expressed, and enlightening report.*

The report deals with most of the topics that now demand the attention of those educationists who are responsible for secondary education and especially for finding the best method of making the right kind of provision for educating the large number of pupils who will in future leave school not at thirteen or fourteen, but at sixteen. It deals also with one subject of less general, but yet vital importance, namely, school endowments. Readers who are interested in the legal and administrative aspects of this thorny subject should study Paragraphs 109 to 145. These no doubt reflect the opinions formed by the chairman during his long experience in the Charity Commission and at the Board of Education.

Special attention must be drawn to the way in which the report deals with the question of securing local management for the State-aided secondary school. At the present time, outside the county boroughs and the County of Radnor, all secondary schools in Wales, except those of the new municipal class, are governed on a dual system—namely, by the county education committee and the district governing body. The latter contains from twelve to twenty members. It varies a great deal in composition, the constant elements being representatives of the local education authority and of the elementary education authority. It is to be noted that in a substantial number of cases the county authority appoints less than a majority of the members. The apportionment of functions between the county and the district body is treated on a basis of equality of status rather than on a subordination of one body to the other. There is no question of delegation; the district body is given certain powers and functions to be exercised in independence of the county authority. Broadly, the county exercises certain functions which are, in the main, of common interest to all the schools, while the district bodies are responsible for local finance and for ordinary administration. The latter have a real control over the schools, including the power (exercised sometimes without consultation with the larger authority) of appointing and dismissing head teachers.

On account of difficulties that have arisen in certain districts in connexion with the maintenance of the secondary school, opinion has become fairly unanimous that the time has arrived for a thorough reorganization of the financial relations between the county and district committees. Must this entail the curtailment, and even the abrogation, of the other powers of the local governors? The matter produced greater difference of opinion than any other branch of the Committee's inquiry. The representatives of the large county of Monmouth, for example, were for the absolute sovereignty of the county. Glamorgan, on the other hand, insisted on the least possible interference with existing local rights. But the teaching profession were, in the main, strongly on the side of the local bodies. "On the whole both sides agreed," so runs the report, "in thinking that local bodies were the best instrument for stimulating and organizing local interest in the schools, and that no county authority could afford to dispense with them altogether." They must, however, exercise considerable powers; otherwise the most useful people will not care to serve on them. The report adds that "it is undoubtedly

a serious matter to call upon the local governors of intermediate schools, who have exercised independent functions of great importance for the past twenty-five years, to surrender those functions, and even to give up their very right to exist at all." It therefore recommends making the establishment of local bodies a statutory duty of the education authority, but leaving the authority discretion as to the functions to be exercised by them.

But the consideration of the best means for arousing local interest in the work of the secondary schools and enlisting the services of the best men in each district in governing them, has led the committee to a wider problem—namely, that of the delegation by the county education authority to the local bodies of more important duties than are at present even entrusted to the latter in many parts of the country, and that they shall include oversight of elementary and other schools. It is well known that the scope of the work which many groups of elementary-school managers are permitted to exercise is so narrow as not to make it worth while for some of our best men to take part in it. However great the advantages conferred on popular education by the Education Act, 1902, may have been, it brought about in most districts one blighting result: it weakened the general interest taken in the primary schools. The larger school boards did, in the main, attract many men and women who were well qualified and anxious to develop the schools of their locality. Under the present system, however, the control of education has in large towns and counties fallen into the hands of a small number of even the education committee: as for the majority of borough and county councillors, they are far too much occupied with other details of their public duties to give any adequate attention to education. It has been the earnest hope of educationists that some method might be found by which the work of managing the elementary schools should be decentralized, and handed over to committees composed of men specially interested in this branch of public work, who would be made responsible for administering it in a fairly large section of their town or county, while leaving the ultimate financial responsibility in the hands of the parent council.

The committee say that their consideration of the constitution and functions of local governors of secondary schools has been complicated by the desire expressed by the witnesses that these bodies should not be constituted for that purpose only, but should also undertake certain functions with regard to other grades of education.

There are signs of a general movement in this direction throughout Wales, but in Glamorgan the local authority have already worked out and published a plan which they are prepared to put into execution forthwith. In this plan the local body constituted under the County Intermediate scheme is accepted as it stands, and use would be made of a power in the scheme to add, with the consent of the local body and the Board of Education, a number of representatives of the county authority. This enlarged body would continue to act as the local governors of the intermediate school, but would also have delegated to them substantial powers of management over other secondary schools in their area, over continuation schools and technical and evening classes, and over public elementary schools. This is a bold and attractive plan which might obviously do much to break down the administrative walls by which fragments of education are secluded.

NORTH OF ENGLAND CONFERENCE.—Full particulars of this conference, which is to be held on January 6-8 next at Sheffield, are now available, and may be obtained from the joint honorary secretaries, Education Office, Leopold Street, Sheffield. Mr. Fisher hopes to be able to give the inaugural address, and this will be followed by a paper on "Education and Leisure" by Sir William Hadow. At the sectional meetings on January 7 and 8 a great variety of subjects will be dealt with, including the teaching of Latin, geography, music, handwork, and art, the finance of education, technical education, day continuation schools, and physical education. A very representative body of experts will deliver addresses and open discussions, and the meetings promise to be very useful and successful.

* It can be had from H.M. Stationery Office, 1s., Cmd. 967.

PERSONAL PARAGRAPHS.

IT is understood that Mr. A. C. Coffin, whose resignation as Director of Education for Bradford is to take effect at the end of the year, has been offered an important Government post. Mr. Coffin, who is a native of Dorchester, was educated privately and at University College, London, obtaining his B.A. degree in 1889. After some nine years' service in elementary and higher-grade schools under the late London School Board, he became principal of the "Normal" Department of the Technical and University Extension College, Colchester, and seven years later he accepted the position of Director of Education for Darlington, a post which he relinquished in 1906 to go to Newcastle-on-Tyne as Education Secretary. He was appointed Director of Education at Bradford in 1911, and under his capable organization Bradford has been the pioneer area in many developments in education. His resignation at a time when far-reaching schemes have been launched will be deeply regretted.

* * *

THE REV. E. C. CROSSE, D.S.O., M.C., late assistant master at Marlborough College, Wilts, has been appointed head master to Christ's College Grammar School, Christchurch, New Zealand.

* * *

MANY pleasurable memories are recalled by the news of the retirement of Prof. Mark R. Wright, the first principal of the day training department of Armstrong College, Newcastle-on-Tyne. Previously head master of the Gateshead Higher Grade School, he opened the Normal Department at Armstrong College in 1890 with twenty-one students; to-day over 250 students are in attendance, many of whom are taking three or four year degree courses. Of late years Prof. Wright has been largely instrumental in the organization of the successful Old Students' Union of students and staff of the College Education Department. Although he will retain his membership of the Gateshead Education Committee, his retirement is a great loss to educational activities in the North.

* * *

HISTORICAL students will regret to learn that Mr. R. L. Poole has retired from the editorship of the *English Historical Review*, with which he has been associated since its foundation in 1885. His successor, Mr. G. N. Clark, Fellow of Oriel College and late Fellow of All Souls College, Oxford, has been assistant editor for the past twelve months. The first editor, Prof. Creighton, resigned on his appointment to the Bishopric of Peterborough in 1891, and was followed by Prof. S. R. Gardiner, who held the post until the beginning of 1901. In 1895 Mr. Poole became joint editor with Prof. Gardiner, and from 1901 he assumed sole charge of the *Review*.

* * *

THE REV. HERBERT MORGAN has been appointed by the Council of Aberystwyth University College to be Director of Extra-mural Studies in the area served by the College. Mr. Morgan is well known in the public and social life of Wales, and it is confidently anticipated that his appointment will advance the development of the university tutorial class movement in Central Wales.

* * *

THE death of Dr. J. F. Bright, late Master of University College, Oxford, severs an honoured link with the days of the development of the Modern History School. The son of a famous physician, he was educated under Dr. Arnold at Rugby. He entered University College, Oxford, in 1851, and was placed in the First Class in the Law and Modern History School in 1854. Two years later he accepted the invitation of Dr.

Cotton to join the staff of Marlborough College, where he created and took charge of the modern side—the first experiment of the kind. Bright's ideal was the provision of a classical education based on the classics of French and German literature, with a background of history and some knowledge of natural science. First under Dr. Cotton and then under Dr. Bradley, he greatly influenced the development of the public-school system during his tenure as Head of the modern side for sixteen years. It was during this period that he began to write his well known "History of England." In 1870 Dr. Bright followed Dr. Bradley to Oxford and became Modern History Tutor and Lecturer at University College. He was elected Fellow and Dean in 1874 and an Hon. Fellow of Balliol in 1878, and in 1881, when Dr. Bradley became Dean of Westminster, Dr. Bright succeeded him as Master of University. Dr. Bright was an inspiring teacher, who will be long remembered by a host of Oxford men for his breadth of treatment, his lucid presentation of facts and principles, and for his kindly and sympathetic manner.

* * *

THE death is announced of Mr. F. E. Battersby, Head Master of the Newport High School for Boys since 1905. Educated at Preston Grammar School, Mr. Battersby entered Queens' College, Cambridge, with an open Mathematical Scholarship in 1891, graduated B.A. in 1894 as a Senior Optime, and proceeded to the M.A. in 1898. Appointed on the staff of Heath Mount School, he subsequently became head master. Later he gave service at Hereford County School, and accepted a mastership at Newport in 1896.

* * *

THE death is reported of Dr. Percival Henderson, Deputy Director of Education for Liverpool. Dr. Henderson was appointed to this position only last May, after holding the post of Chief Inspector of Schools under the same authority. He was formerly an Inspector of Schools under the London County Council.

* * *

CAPTAIN F. MORROW, M.C., Head Master of the Windsor County Boys' School, is resigning his position at the end of the term to take up an appointment in the Army Educational Department. An old pupil of Pococke College, Kilkenny, Captain Morrow graduated B.A. (N.U.I.), with honours in history, English language, and jurisprudence in 1908. He has had teaching experience at the Royal Latin School, Bucks, Maidenhead Modern School, Aberdeen College School, Newtown Intermediate School, and, previously to his appointment to the headship of Windsor County School, was a member of the assistant staff. He is the author of several books on geography for school use and a designer of geographical apparatus.

* * *

MANY old friends will learn with regret of the death of Miss Fanny Franks on October 20. She had retired from active work for many years, but she was well known to the older members of the teaching profession as an original thinker, a pioneer in the kindergarten movement from the "seventies," and an enthusiast in all that concerned the education of young children. She was one of the original members of the Froebel Society and served on its council, and on the board of governors of the National Froebel Union, for many years. In 1876 she opened a training school for kindergarten teachers in Camden Road, afterwards transferred to Weymouth Street, Portland Place, and in 1885 to York Place, Baker Street, where the greater part of her work was done. There many interesting educational experiments were carried out, notably those of Mr. Ebenezer Cooke, in the teaching of drawing and nature study. Many generations of students trained by Miss Franks owe her a great debt of gratitude for her large-hearted views on the meaning of education and for her personal help and kindly influence.

ONLOOKER.

TOPICS AND EVENTS.

GUILD OF EDUCATION AS NATIONAL SERVICE.—The object of the Guild is by public lectures to promote education as "service to the community," recognizing that the education of the individual to an individual sense of social responsibility is fundamental to all further progress in the civilization of society. The Halsey Training College, organized by the Guild, provides a new type of training which gives great freedom for individual work and interests. This is secured by a system of record books, essays, and theses, instead of examination, at the end of the year's course. Thus a student may specialize and concentrate on his own work, both in the course of reading and in the practical teaching or social work. The course of training in preparation for the new day continuation schools has been approved by the Board of Education, and the certificate qualifies the teacher for public appointments under the L.C.C. or other local authorities. Students who have trained at the Halsey College are holding posts as teachers in the new day continuation schools, in secondary schools, and in elementary schools. Other students obtained responsible work among adolescents in clubs. Of twenty-four students last year not more than two were doing the same course. The Guild seeks to find a large number of men and women of originality and personality willing to prepare themselves to meet the urgent need (especially for the continuation schools) of properly qualified teachers. That teaching is too often thought to be tedious and dull shows the importance of definite propaganda work on behalf of recent progress in education and the necessity for training. The present is a time of such rapid development in all departments of educative activities, so full of opportunity, that the work should attract many of those who desire a piece of the world's work to do that is worth doing.

INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.—A Bulletin, published by the International Federation of University Women (1s. net, from the Secretary, 50 Russell Square, W.C.1), contains a report of the first International Conference, held in London last July. The addresses given by Viscount Grey, of Fallodon, and other speakers on the ideals and work of the Federation are printed in full, and it is interesting to note the emphasis laid by Lord Grey on the work which university men and women might do for the peace and civilization of the world. He dwells

especially on the excellent results of personal intercourse between the teachers and students of the universities of the world. It is to promote this needed intercourse, by means of exchange lectureships and endowment of scholarships, that the Federation has been formed. Subsequent sessions of the Conference were devoted to a consideration of systems of university education and the opportunities open to women in other countries. A useful summary of these reports is printed in the Bulletin. A report of a discussion on such topics as co-education, salaries, married women workers, and the proper reward of academic merit, illustrates the varied nature of the problems encountered by academically trained women in different parts of the world.

EDUCATION IN INDUSTRY AND COMMERCE.—Should an educational conference concentrate intensively on one outstanding topic of discussion, or should its programme include many diverse problems calculated to spread the interest more widely? The Association for the Advancement of Education in Industry and Commerce has on more than one occasion focused its attention almost entirely on continuation schools; it has also touched the fringe of adult education. Its recent autumn conference covered rather a broad field. Prevailing industrial conditions greatly reduced the attendance, but seemed, if anything, to enhance the earnestness of the speakers and the vigour of the discussions. In the opening address, Viscount Bryce indicated that those firms which institute definite schemes of education are, in a sense, the successors of the medieval skilled craftsmen who personally directed the training of their apprentices. On the other hand, the Vice-Chancellor of the University, when welcoming the conference, pointed to the newly instituted Degrees in Commerce as a possible goal for those whose education is being carried on literally "in industry and commerce." Closely interwoven questions were raised by three consecutive addresses: "The Administration of the Fisher Act so far as it is concerned with Industrial Work in Rural Areas" (Mr. W. A. Brockington); "The Operation of the Fisher Act so far as it concerns the Industries of Suburban Areas" (Mr. T. B. Wheeler); "Further Education within the larger Engineering Works" (Mr. R. G. Hosking, of the British Thomson-Houston Company). Dr. C. S. Myers opened a discussion on "The Use of Psychological Tests," with special reference to the use of such tests in business undertakings. Psychology is "in the air" at present: many per-

METHUEN & CO., LTD., 36 ESSEX STREET, LONDON, W.C.2

sons are honestly trying to apply it to commercial and industrial conditions, while many more are talking about it. Emphatically it is a matter for the trained expert rather than for the amateur. Experts are few in number, but Dr. Myers and those associated with him should be able to guide the progressive employer or employment manager who is seeking psychological help in his factory or business house. A joint discussion was opened by the reading of three papers, dealing respectively with "Education for Commerce" (Mr. T. S. Ratcliffe); "The Education of Engineers" (Principal H. Schofield); "The Place of Education in a Business House" (Mr. T. Knowles). After all, the last title may be said to embody the whole aims and objects of this association, which sets out to show that there is a place for education, broadly interpreted, in both industrial and commercial establishments. The next general meeting of the association will probably be held in Nottingham about June of next year.

HOW THE STATE HELPS WOMEN TO TAKE THEIR PLACE.—When the authorities controlling the National Relief Fund allocated £500,000 to the Central Committee on Women's Training and Employment, they financed a scheme which is enabling women whose positions have been injuriously affected by the war to fit themselves for self support. Some women are studying law and medicine; others want to be dentists, midwives, artists, teachers, housekeepers, journalists, secretaries, &c. All have applied to the General Committee for monetary aid for their maintenance during training, and have been assisted according to their different circumstances. There must be many other women to whom such help would be welcome, but who do not know how to proceed in order to get it. At any Employment Exchange they will find application forms with instructions. The committee are empowered to give financial assistance for the purpose of training only to women whose earning capacity or opportunities have been injuriously affected as the result of conditions arising out of the war. They include, for example, women who, owing to changed family circumstances due to the war, found their training interrupted by the necessity of becoming wage earners; women who were dependent on relatives who have been killed or disabled in the war, and are without qualifications to enable them to obtain situations; women and girls who find their parents no longer able, owing to the war, to pay for their training.

ROYAL COLONIAL INSTITUTE ESSAY COMPETITIONS.—The Council of the Royal Colonial Institute, with a view of encouraging the progress of imperial studies in the schools of the Empire, have decided to award in 1921 medals and prizes of books for the best essays sent in by boys or girls who are pupils at schools in the British Empire. The essays will be adjudicated upon in three classes:—Essays submitted by candidates (a) of sixteen years of age or over on July 31, 1921; (b) above the age of fourteen and under sixteen; (c) under the age of fourteen. The competitions are open to pupils of any school in the British Empire, and to the children of British subjects who are pupils at schools outside the British Empire. The length of the essays must not exceed 3,000 words in (a), or 2,000 words in (b), or 1,000 words in (c). The prizes will be awarded by the Council after consideration of the report of the appointed examiners. Essays must reach the Institute not later than July 31, 1921. The prizes and medals to be awarded will be: (a) First Prize, the Silver Medal of the Royal Colonial Institute, together with suitably inscribed books to the value of three guineas; Second Prize, suitably inscribed books to the value of two guineas. (b) First Prize, the Bronze Medal of the Royal Colonial Institute, with suitably inscribed books to the value of two guineas; Second Prize, suitably inscribed books to the value of one and a half guineas. (c) First Prize, the Bronze Medal of the Royal Colonial Institute, with suitably inscribed books to the value of one and a half guineas; Second Prize, suitably inscribed books to the value of one guinea. The subjects prescribed are: (a) "Discuss the Effects of the Great War (1914-18) on the British Empire"; (b) "Compare the Lives of Drake and Raleigh and the Results of their Work as Empire Builders"; (c) "Which Part of the British Empire would you prefer to live in, and why?" Full particulars can be obtained from the Secretary at the Institute, Northumberland Avenue, W.C.2.

PLAY COMPETITION.—The Governors of the Central School of Speech Training offer a prize of £25 for a Three Act Modern Comedy, suitable for production in London at a special performance, and written by an undergraduate student of the London University, or a student of one of its affiliated schools. The reading committee will include Mr. W. L. Courtney, Mr. E. A. Baughan, Mr. Otho Stuart, Miss Elsie Fogerty, Mr. Dion Titheradge, and Mrs. Robert Foot. Full particulars may be obtained

THE ASSOCIATED BOARD, R.A.M. AND R.C.M.—The exhibitions offered annually by the Associated Board of the Royal Academy of Music and the Royal College of Music, which entitle their holders to free tuition at the R.A.M. or the R.C.M. for two or three years, have been awarded to the following candidates:—Edna Hatzfeld, London (Pianoforte), Agnes M. A. V. Martin, Brighton (Violin), and Mary E. Toop, Southampton (Violin), at the R.A.M.; and Elfrida Black, London (Pianoforte), Horace C. Hewes, London (Violin), and Gwennie Shaw, Truro (Singing), at the R.C.M.

CONGRESS OF UNIVERSITIES.—The first Congress of Universities of the Empire was held in London in 1912, when all, to the number of fifty-three, were represented. The Universities Bureau was an outcome of this Congress, and to it was entrusted the summoning of future Congresses at intervals of five years. In 1917 this intention was frustrated by the war. It has now been arranged that the second Congress shall be held next summer. Dr. Alex. Hill, who took over the organization of the first Congress after the death of Dr. R. D. Roberts, and has acted as Secretary to the Bureau since its institution, is engaged in its promotion. The number of universities in the Empire has now increased to fifty-eight, and all, it is anticipated, will make a point of sending delegates to this great Council on Higher Education. The University of Oxford has invited all members of the Congress to be its guests from July 5 to July 8. The Chancellor of the University, Lord Curzon, will preside over the morning session on July 5, and Mr. A. J. Balfour, Chancellor of the University of Cambridge, will preside in the afternoon. On the preceding day the Congress will assemble in London for certain ceremonial functions and entertainments, of which the programme will be announced at a later date.

PRIMARY SCHOOL NOTES.

Teachers and the Burnham Report.

THE acceptance of the Burnham Second Report by the National Union of Teachers marks an important stage in the national development of fixing wage standards by negotiation. There is no reason to doubt that teachers as a class are strongly opposed to the familiar weapons of the strike and direct action, and that many of them have voted against their personal inclination in order that a national lead might be given to the movement in favour of an effective system of joint wages boards. The votes in favour of the Report numbered 64,982, while 37,547 were cast against it. Not one of those who advocated its acceptance gave it whole-hearted support, but the case for acceptance was thoroughly organized, while the opposition was conspicuous mainly for the inability of its spokesmen to develop the significant lines of criticism. In the opinion of representative teachers there was a volume of hostile opinion at the Conference deep enough to carry the rejection of the Report. The rural representatives were favourably influenced by the view expressed from the platform that the new Standard Scale I would closely approximate to, if it did not coincide with, Scale II, while members from industrial areas endorsed the opinion that areas which could prove the existence of economic conditions similar to those prevailing in the metropolitan zone could justly claim the adoption of Scale IV.

The Results of Acceptance.

THE immediate results of the decision will be to free education authorities and the National Union of Teachers from further anxiety with regard to salary questions in so far as the discussion of a national scale is concerned. The new problem will be manifold—to secure a contented teaching service under conditions which prescribe three varying rates of payment, or possibly four, for the performance of similar duties in adjacent areas. That the industrial districts throughout the country will promptly claim Scale IV as that appropriate to their economic conditions is certain. That they will not obtain it is almost equally certain. The existing movement of young teachers to the service of education authorities which have adopted the highest scale will develop naturally; and in due course, when their most enterprising servants have left them, the authorities will be forced to adopt Scale IV, or approximations to it, in order to recuperate their depleted staffs. For many years London has been avoided by provincial teachers, owing to the low salaries which have prevailed. Under the terms of the Burnham Report, London promises to resume its former distinction of being the teachers' Mecca; and the rural and industrial areas have every prospect of regaining their renown as successful training grounds for the London teaching service.

(Continued on page 792.)

A. & C. BLACK'S LIST.

NEW HISTORY VOLUMES.

THE MAKING OF EUROPE.

A GEOGRAPHICAL TREATMENT OF THE HISTORICAL DEVELOPMENT OF EUROPE.

By W. H. BARKER and W. REES. Large crown 8vo, illustrated with about 40 Sketch Maps. Price 6s.

This volume gives in a new form the essential features of European History, and is designed to meet the requirements of Continuation Classes and the higher forms of Secondary Schools.

A SHORT SKETCH OF EUROPEAN HISTORY.

By H. E. MARSHALL, author of "Our Island Story." Vol. I.—FROM THE FALL OF THE ROMAN EMPIRE TO THE REFORMATION.

Large crown 8vo, with Maps. Price 5s.

This book is not intended to be a compendium of European History, but rather an introductory study recording in as dramatic a form as possible the events and influences which have had most effect on the general development of Europe.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

A SHORT HISTORY OF THE BRITISH EMPIRE AND THE UNITED STATES.

Edited by H. CLIVE BARNARD, M.A., B.Litt. With contributions by leading writers in each of the self-governing Colonies, in India, and in the United States. Containing 22 Maps, specially prepared. Large crown 8vo. Price 7s. 6d. net.

The book is designed primarily for the upper forms of Secondary Schools, especially in connexion with advanced courses in "modern studies," and for candidates for history scholarships. At the same time it should prove useful in Evening and Continuation Schools, in Training Colleges, and for private students.

THE BRITISH EMPIRE. THE ROYAL NAVY.

TWO NEW SETS OF BLACK'S HISTORY PICTURES.

Edited by G. H. REED, M.A. In special detachable portfolio, containing about 75 Illustrations. Price 2s. 6d. per set. *General Plan of the Series:* Carefully selected pictures, illustrating the chief events of British History; Photographs of castles, ruins, coins, dresses, manuscripts, &c.; plans and maps.

BLACK'S WALL PICTURES OF BRITISH HISTORY.

Each 10s. net. (Unmounted prints.)

The size of each picture (unframed) is about 38 x 27 inches, and the periods of history covered are as follows:—

Pictures ready.
EARLY BRITISH.
ROMAN TIMES.
ANGLO-SAXON PERIOD.

In preparation.
NORMAN TIMES.
MIDDLE AGES.
THE AGE OF INVENTION.
MODERN TIMES.

The pictures have been painted by Mr. G. SPENCER-PRYSE, a British artist of repute. Each picture is accompanied by a specially prepared booklet by Mr. H. COURT, B.Sc. (Econ.), furnishing the source of many interesting and informative lessons.

Latest Educational Gymnastic Outfit

PATENT APP. No. 16891/17

PORTABLE AND ADJUSTABLE

**BUILDING EXPENSES AND DIFFICULTIES ENTIRELY SURMOUNTED
NO SPECIAL BUILDING REQUIRED
A WONDERFUL CONSTRUCTIONAL INNOVATION**

Providing sufficient apparatus for full class practice in a hall, old gymnasium room, playground, or field.

By courtesy of the Chelsea College of Physical Education, London, S.W. 3.

LENGTH - 36 ft.

WIDTH - 18 ft.

HEIGHT - 14 ft.

(Modifications as to Length, Width, and Height can be arranged.)

POINTS FOR CONSIDERATION:

1. Old and stuffy gymnasiums may be dispensed with in the temperate and warm months of the year.
2. May be erected in a hall without interfering with walls or roof.
3. May be erected in hall, iron buildings, on a playground, or playing fields.
4. Site and heavy special building costs unnecessary.
5. Can be erected in a well of Swimming Bath, winter months.
6. Quickly set up or taken down without skilled labour.
7. All connecting parts numbered clearly.

Sole Makers: SPENCER, HEATH & GEORGE, Ltd.
 EXPERT GYMNASIUM OUTFITTERS, 48, 52, & 54 GOSWELL ROAD, LONDON, E.C. 1.

The Elimination of the Man Teacher.

THE most strenuous opposition to the Burnham scales has come from men teachers, who contend that the maxima in all grades are insufficient to maintain a decent standard of family life. They point out that, inasmuch as women dominate the profession in the proportion of three to one, acceptance has been secured by the overwhelming vote of women teachers. The feeling among representative men teachers is that the Burnham scales definitely exclude men from the primary teaching service upon economic grounds. Desperate efforts are being made in various districts by the newly formed Schoolmasters' Association to secure such economic adjustments as will relieve the position. But the opposed concentration of women who demand equal pay with men teachers effectually counters the inclination of education committees to make concessions to the latter. The modern system of preparation for the teaching profession includes the normal period of secondary-school life, and therefore equips candidates as well to enter the secondary as the primary branch of the service. It would appear that future recruitment to the secondary branches of the teaching service will be secured at the expense of the primary services. The handicap of primary teaching is further illustrated by the fact that, under the highest Burnham scale, a man graduate can attain only a maximum of £425 per annum. If the teacher should work in a secondary school in the metropolitan area he would enjoy a maximum salary of £550. The same influence would similarly attract the more ambitious women to the secondary schools. The operation of the Burnham scales may be expected, therefore, to improve substantially the supply of teachers to these schools.

Teachers and Marriage.

THE effect of the marriage of men teachers is usually to fix them permanently in the teaching service; in many cases marriage causes men to engage in evening school work. In the case of women teachers, marriage generally means resignation from the profession. The examination of the records of a well known training college for women teachers shows that, during a period of twenty years, 50 per cent. of the ex-students married and left the profession. The percentage of resignations among uncertificated teachers is probably higher, since many of them enter the profession only temporarily in view of their marriage in due course. During the period of the war considerable numbers of married women teachers returned to the schools; but the occasion was exceptional, and they are now gradually retiring into family life. It is difficult to ascertain the average professional life of women as compared with men teachers, but a limited inquiry suggests that it is approximately in the ratio of 1:2; so that, if the sum of £300 each be expended upon the training of a man and a woman teacher respectively, the State will secure an educational return twice as great in the case of the man as it would from the woman. This factor is likely to have an important bearing upon the consideration of men teachers' salaries by education committees in the immediate future.

Economy in Education.

THE suggestion of one of the parliamentary groups that the action of the new Education Act should be peremptorily stayed is arousing considerable opposition among all sections of the community. The movement in favour of higher education is now so pronounced that the danger of reaction is correspondingly lessened. Any suggestion that half-time labour at the age of twelve years, and full-time school exemption at the age of thirteen years, should be allowed to persist after the close of the present month, will be opposed to the utmost limit by all who have the welfare of children at heart. It is difficult, even on economic grounds, to advocate the continuance of a system which admittedly employs children to the exclusion of adult workers. The school medical returns prove conclusively that children cannot bear the strain of half-time labour without serious detriment to their health. On the other hand, there is need of wise internal economy in introducing reforms to the schools; there is reason to fear that full use is not being made of existing facilities in some areas. New centres are being set up which have no relation to a comprehensive scheme of education; and which, therefore, involve waste. Teachers are not being encouraged to formulate special schemes of work for pupils who will shortly remain at school for an additional year. Inspectors of the Board too often take up a merely critical or non-committal attitude, instead of encouraging every teacher who is eager to forge ahead. It is necessary for the Board of Education to realize promptly that the fine enthusiasm of its teachers, inspired by the ideals of the new Education Act, is becoming chilled. All the schemes in the world will be useless unless they enlist the active sympathies of the teachers. A direct call to them, accompanied by a reasonable degree of freedom to act, would do more to breathe the breath of life into the Act at this juncture than anything else.

University Correspondence College

(FOUNDED IN 1887.)

Principal: WM. BRIGGS, LL.D., D.C.L., M.A., B.Sc.,
F.C.S., F.R.A.S.

During the last Fifteen Years

6707University Correspondence College
Students**PASSED INTERMEDIATE AND DEGREE
EXAMINATIONS OF LONDON UNIVERSITY,**and during the same period U.C.C. Students have gained
5,200 Successes at Matriculation.**COMPLETE PROSPECTUS**, giving Full Particulars of

to **Private Students**, from the Secretary,

No. 14 BURLINGTON HOUSE, CAMBRIDGE.

THE ANNUAL

"DIRECTORY of EDUCATIONAL ASSOCIATIONS"

which has been described as ONE OF THE MOST USEFUL RETURNS PUBLISHED BY ANY BRITISH EDUCATIONAL JOURNAL will appear in the MARCH, 1921, issue of "THE JOURNAL OF EDUCATION AND SCHOOL WORLD"—a paper "indispensable to all school and college reading-rooms in these islands."—*The Westminster Gazette*.

(MARCH 1919 issue is out of print.)

This "DIRECTORY," will be corrected to date by responsible officials. It will give (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

London: Mr. WILLIAM RICE, 3 Ludgate Broadway, E.C.4.

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the CHRISTMAS VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only **during each sweeping** (without sprinkling of any kind), but **also throughout all the intervening periods**—which is even of **greater hygienic importance.**

"Florigene" has been continuously used for many years on the floors of The Royal Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Send for Medical Reports and Testimonials to the Sole Manufacturers—

THE "DUST-ALLAYER" CO.

4 Vernon Place, Bloomsbury Square, London, W.C.1.

Contractors to Admiralty, War Office, H.M. Office of Works, India Office, L.C.C., &c.

A MESSAGE TO VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume—are continually provided by us.

We would welcome your inquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

Name

Address

Please say if interested in a new or old instrument.

New Violin..... Old Violin.....

Approval period arranged with responsible parties.

Old violins bought or taken in exchange.

HAWKES & SON, Denman St., Piccadilly Circus, London, W.1.

THE "NEW ERA" GLOBES.

These are small rubber Globes suitable for distribution round the class. Cheap, durable, and attractively coloured, they aim at supplying a long-felt want. A series is being prepared, including Globes showing Orographical Features, Political Divisions, Temperature, Rainfall, Vegetation, and Routes of Explorers. All particulars to be obtained from—

Miss E. M. WALTERS, F.R.G.S.,
71 and 84 Goldstone Villas, HOVE.

SHAKESPEARE.—For Oxford and Cambridge Locals.

LECTURE RECITALS by **Mr. ADRIAN HARLEY**

1920, "The Tempest," "Hamlet," "Julius Caesar," &c.

St. Cuthbert's School, Southbourne-on-Sea, Hants, July 8th, 1920.—"Dear Mr. Harley, I am very glad to write to tell you that your Lecture Recital of 'King Richard II' the other day was greatly appreciated, and that the girls who are taking it for their Certificate examination feel that it was a very helpful piece of revision for them. I hope you will come again some day. Yours very truly, MAUD FULLER."

For terms and vacant dates apply—

MR. ADRIAN HARLEY, 49 TAVISTOCK SQUARE, W.C.1.

Kensington College,

34 Bishop's Road, Paddington, W.2.

(Director:

Mr. JAMES MUNFORD, V.D., F.R.S.A., F.R.C.I.),

Opened by Her Grace Katharine Duchess of Westminster,

supplies a modern and comprehensive Training for Private Secretaries, Correspondents, Accountants, and Journalists. It confers Diplomas in Secretarial Training. Actual experience in Secretarial work and responsible office management is provided in the College Offices. A choice of appointments is guaranteed every Graduate. The College is both Day and Residential.

TEXT-BOOKS FOR JUNIOR AND SENIOR FORMS

PUBLISHED AT THE

University Tutorial Press.

ENGLISH, FRENCH, LATIN.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition, Revised and Enlarged.* 2s. 3d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s. 3d.

"Makes plain for the young pupil the essentials of good writing."—*Education.*

English Composition, A Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. *Second Edition.* 4s.

"Excellent devised and arranged."—*School World.*

English Course, The Matriculation. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. *Third Edition.* 5s.

"Admirably fulfils its purpose. The chapters on précis-writing and indexing are excellent."—*Westminster Review.*

English Verse, An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition.* 4s.

"A charming and truly representative collection."—*Guardian.*

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKS, M.A. 4s.

"The choice of writers could not well be bettered."—*Saturday Review.*

English Literature, The Tutorial History of. By A. J. WYATT, M.A. *Third Edition, continued to the present time.* 4s.

"It is well written, well informed, and accurate."—*The Journal of Education.*

English Literature of the Nineteenth Century. By HENRY CLAY, M.A., and A. J. WYATT, M.A. 3s.

"A piece of sound and sympathetic scholarship."—*Athenæum.*

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 4s.

"The book becomes a serious rival to those existing."—*Schoolmaster.*

French Course, Senior. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 5s.

"A model of clearness and simplicity."—*The Journal of Education.*

French Course, Direct. By H. J. CHAYTOR, M.A., Fellow of St. Catharine's College, Cambridge. Illustrated. 2s. 3d. With Vocabulary (French-English). 3s. Vocabulary (separately) 1s. net.

"Mr. Chaytor is a teacher of experience, and his book does him credit."—*School World.*

French Composition, Groundwork of. By Professor ERNEST WEEKLEY, M.A. 3s.

"The author's works have done much to raise the standard in French scholarship throughout the country."—*Secondary School Journal.*

French Essays, Matriculation. (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s. 3d.

"A serviceable and well graded book."—*School World.*

French Reader, New Junior. By J. P. R. MARICHAL, L. és L., and L. J. GARDINER, M.A. 3s.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education.*

French Reader, Senior. With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. 4s.

"This is a splendid reader."—*Schoolmaster.*

Latin Course, New Junior. By J. V. THOMPSON, M.A., and L. M. PENN, M.A. 5s.

"A very successful compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 5s.

"The book is business-like and well arranged."—*Guardian.*

Latin Authors, Selections from. Senior Edition. By A. F. WATT, M.A., and B. J. HAYES, M.A. 4s.

"It is quite an interesting selection, and well done."—*School World.*

Latin Reader, New Junior. By A. J. TATE, M.A. 3s.

"Mr. Tate has shown great judgment in the extracts he has chosen."—*Bookseller.*

GEOGRAPHY AND HISTORY.

Geography, Junior. By G. C. FRY, M.Sc. *Second Edition.* 4s.

"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education.*

Geography, Textbook of. By G. C. FRY, M.Sc. *Third Edition, Revised and Enlarged.* 6s. 6d.

"A capital exposition of the modern methods of treating geography."—*Teacher's World.*

LONDON: MR. WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

THE STUDY OF WORLD-HISTORY.

By OSCAR BROWNING.

[NOTE.—The venerable Mr. Oscar Browning has long been known as a pioneer in the advocacy of the study of World-History. Hence the following paper, written some years ago but never before published, is of great interest at the present moment when, owing to the work of Mr. H. G. Wells and others, the study of World-History is becoming popular. The first part of the paper appeared last month.]

II.

IF we are to begin our historical studies with the history of the world, let us take a brief survey of the procession of the ages as they pass before our view. We may begin conveniently with the year 6000 B.C. The earliest date known in the world's history is June 15, 4241 B.C., the day on which the reformed Sun Calendar, taking the place of the Moon Calendar which preceded it, was introduced into Lower Egypt. The events of the many thousand years which were governed by the Moon Calendar are imperfectly known to us. Of the origin of mankind we know nothing except that there was no Golden Age. Man, whether descended from beasts or not, lived at the beginning very like a beast, and only by slow degrees did he attain to those characteristics which are now regarded as essential to humanity. China need not detain us long in our general view. It has a civilization apart, well worth our study, but self-contained and influencing but little the portion of the world with which we are most concerned. India is intensely interesting, but should be treated separately until it becomes connected with the history of Europe. Our attention should be first directed to the Babylonians and Assyrians, our knowledge of whom will be increased every year by new discoveries. The earliest Babylonians were the Sumerians, a Mongolian race, who reached a very high civilization at a very early period, their records going back to 6,000 years before the birth of Christ. To them we owe the

science of numbers and of astronomy, the practice of agriculture and of commerce and of private law; all of these developed to an extent hardly credible, and it is possible that to them rather than the Jews we owe the beginnings of religion, the worship of an all good, all wise, and all knowing God. It is not without reason that the Garden of Eden, the spot in which a man first came face to face with his Maker, is placed in the valleys of the Tigris and the Euphrates.

The Egyptians occupy a large place in general history from the abundance of their records, but they are intrinsically less interesting than other people. They were hide-bound in formulas; they borrowed much, but created little, and it is difficult to understand why the Greeks turned to Egypt for enlightenment as the best minds of Europe turned to France before the Revolution, to Germany at a later period, and as perhaps some day they may turn to England. The Phoenicians demand our attention as the merchants of the world, doing for civilization all that commerce could alone do without government and without faith. They were crushed, whether for good or for evil, by the higher political sense and deeper spirituality of Rome. The Jews had better be studied by themselves: a nation penetrated by a self-consciousness and a belief in themselves, which secured them in ancient times against extinction, and secures them now a commanding position in the councils of the world. In 780 B.C. Deioces the Mede founded his capital, Ecbatana, and in 553 B.C. Cyrus the Persian overthrew the Median Empire. The mighty Persian Empire deserves our careful study, which it has not generally received, chiefly from the attention we have bestowed on its rival, the Greeks.

We have now reached the Greeks—the most highly endowed, the most intellectual people, of whom we have any cognizance: foremost in every effort which can dignify or adorn humanity, supreme in everything except in the arts of government, and supreme in the criticism of those arts. Greek sculpture is the high-water mark of all plastic art; Greek poetry is the model of poetry for all time. Greek philosophy has never been surpassed in form, and rarely equalled in depth; while the language in which these thoughts are enshrined is the most perfect instrument which the human mind has ever produced for the expression of its ideas. May the study of this incomparable tongue never cease to be an essential part of our higher education! The material powers of Greece fell before Rome, but Greece not only captivated her conqueror, but she has captivated since every nation which has had the good sense to seek her influence. "*Vos exemplaria Graeca nocturna versate manu versate diurna*"—the perfect forms of Greek creative might study by day and meditate by night.

Rome is pre-eminently the embodiment of law and government. The Greeks revered law, but as something apart from themselves; to the Roman, law was the marrow of his bones. Hence Rome gave to the modern world the backbone, the iron framework, which is necessary for strength and persistence. The history of Rome is a most attractive study, if it be prosecuted with intelligence: not in dreamy fables, or in doubtful examples of courage and self-devotion, but in the assured domain of constitutional history. Thus contemplated, the fabric of the Roman world rises like one of its own buildings, stone upon stone, course upon course, harmonious, majestic, and unassailable, till we reach the coping-stone. As Pericles concentrates in himself the quintessence of the Athenian spirit, Caesar is the embodiment of Rome, so perfect in his proportions that it needs a long familiarity to realize his greatness, as the Church of St. Peter at Rome seems small until you measure it by your own insignificance. Conceive what the history of this period means. A number of men living in the same town, intimately connected with each other in their friendships, occupations, and family ties, grasp the destinies of the world in their hands, and, having moulded them, throw them down to retain for ever the shape they have given them. Caesar, Pompey, Crassus, Cicero, Mark Antony, Augustus, were men of like passions with ourselves, and of lives not abnormally extended, yet the world is even now feeling the effects of their strife and of their passions, the strength and weakness of their characters, of their loves and hates. Was there ever such an

epoch, and can there ever be again? It is this which makes the correspondence of Cicero of incomparable interest.

The Roman Empire, growing naturally out of the Republic, and shaped by the genius of Caesar and Augustus, finally embraced the whole world. The "*Orbis veteribus notus*"—the "World known to the Ancients"—is conterminous, or nearly so, with the limits of the Roman Empire. Then comes the great catastrophe which we call, rather absurdly, the "invasion of the Barbarians," known to the Germans as the *Völkerwanderung*, the wandering of the peoples—the passage of flood after flood of Goths, Huns, and many other tribes, which swept over the face of the civilized world, and destroyed its fairest features. Was this good or bad? It is common to suppose that the later Roman Empire represented vice, and its assailants virtue; one the weakness of paganism, the other the strength of Christianity; that an effete civilization, fallen into senile decrepitude, was invigorated by the new blood of a young and healthy stock. I am not inclined to accept this view. Let us never glorify revolution. The fabric of Roman law and government existed after the coming of the Germans: indeed, it was the only law and government they knew. The Franks wielded the sceptre of the Roman sovereigns and lived in their institutions, as poor families will live in the halls of a deserted palace. It would have been better if the change could have been gradual: if the Huns had not crossed the Volga, if the infiltration which had been proceeding for years had still gone on, and if the Pagan world had gradually have become Christian. But these are idle speculations. Before this mighty change the voice of science is dumb, and an historian must confess that the most important events in the history of the world are referable to causes which the more they are studied the more they elude our grasp.

After this great destruction comes the gradual building up of a fairer edifice, and how full of interest to all who care for civilization is the history of those great men who brought order out of chaos, and by using the intellectual fire of the Greeks, the legal genius of Rome, and the new spirit of Christianity, by lives of devotion and self sacrifice, gradually created the modern world. Still, in tracing their influence in the West, we must not forget the Roman power which still lived on in Byzantium. Removed from Western influence, endowed with the least useful part of the Greek intellect, corrupted by Orientalism, she still preserved with a somewhat uncouth and clumsy majesty the palladium of order, and was the bulwark against the rude barbarians who have now covered those fair districts of the world with a layer of mud, and who for many centuries were kept by her at bay. The history of the Byzantine Empire deserves far more attention than it has received.

Foremost among these heroes is Charles the Great, the only ruler whose title has become part of his name; a distinction which he well deserves. The German Empire, which he founded in 800, survived in name for a thousand years, and in real power for six hundred. As you mark its vicissitudes you will see that after two hundred years, when the three Ottos had failed to place the supremacy of the Empire on a secure basis, the Church began to take its place as a civilization influence. The two hundred years which followed the year 1000, when many persons thought that the world would come suitably and gracefully to an end, was the period of the domination of the Church, and rendered notable by the Crusades. The domination of the Church was broken by the majestic personalities of the Emperors Frederick the First and Frederick the Second.

After the death of Frederick the Second we enter upon a new period, when Europe loses its continuity, when new States are formed which have to be studied separately, where it is difficult in the conflict of religions, races, and interests to find a clue to the labyrinth. Yet this period, if not the most instructive, is the most picturesque which the Middle Ages afford to us. The period of the Middle Ages is generally held to come to an end in 1492, the date of the discovery of America and of the expedition of Charles VIII into Italy, modern times being marked on the one side by the Reformation, on the other by the growth of classical studies called the

Renaissance. Across the gap strides Charles V, not so great as Augustus, or Charlemagne, or Napoleon, but important enough for attentive study. The period of modern history which we have now reached can, fortunately for us, be largely studied in biographies. Charles V leads us to Elizabeth, Elizabeth with a slight gap to Louis XIV, Louis XIV with another gap to Frederick the Great, Frederick the Great to Napoleon, Napoleon to Victoria, King Edward VII, and King George.

Such is the pageant of the ages, and surely any part of it is worthy of your attention, but in studying any part of it let it always be in reference to the whole. Read history for its own sake, with a sense that you are recalling events which really happened, not roaming in some misty cloudland in which light is dim, but in sunshine as bright as a midsummer day, glowing with warmth and colour like an Indian Durbar, and seeing the work not of phantoms or skeletons or mummies, but of living men and women with passions like our own, often with passions which I hope that few or none of us possess. Do not go for picturesqueness to the historical novel. No novel can be as fascinating as the events themselves, and no imagination can create incidents so startling or so absorbing as those which history records. Do not suppose that the chief end of history is to visualize past scenes. Those who witness events know little about their real significance. If we had seen the murder of Julius Caesar, as he lay pierced by the hands of his friends at the feet of Pompey's statue, or William the Conqueror, as he leapt ashore on the beach of Pevensey, we should have had little idea what these events would lead to or of the place which they occupy in the annals of the world.

I have tried to show that the object of the study of history is not to produce scholars, professors, or antiquarians, but statesmen, that is, men of the statesmen mind, who have the faculty of looking calmly and temperately at events as they pass, not over-elated by the enthusiasm of hope or depressed by the paralysis of despair. In a democratic country all should be statesmen in this sense, and I am told that in Scotland many are. There a labourer will leave his work to discuss with his landlord the vote that he has given in the House, and show that he knows as much about the matter as his master. To produce this capacity no force is so powerful as the study of history, and nothing is so likely to produce a calm and strong intelligence as a knowledge of the history of the world, or to save us from a danger which is always besetting us—the exaggerations of a Yellow Press. Nor is the effect of the study of history upon the character less important. If history teaches us nothing else it will at least show us how men's lives, short as they are, must be spent in increasing the sum of either happiness or misery in the world. Draw this lesson from it and let the guiding principle of our lives be such that whatever we do, great or small, trivial or important, should make the world better for our presence, and those who surround us happier for our association with them.

TRAINING IN CITIZENSHIP.

By G. D. DUNKERLEY and W. R. KINGHAM.

ONE by one important subjects, neglected in the past, are finding their rightful position in the school curriculum. It is little more than half a century since Herbert Spencer had solemnly to urge the claim of science as the most valuable of all studies; that claim needs little urging to-day. English literature, again, once relegated to the leisure hours of a child's day, is now a definite subject of instruction in schools. And the claims of European history were being recognized even before the war emphasized the general ignorance of events outside our shores. One does not contest the value of such subjects now; one merely seeks for an explanation as to why recognition of their value was so long deferred. That question arises with particular force in the case of a subject

which is still far from receiving its proper share of attention in the school world—Civics.

It is difficult to comprehend why boys and girls have been given more or less understanding of the natural world, but have been left to grow up with no understanding at all of the political and economic environment which shapes their lives. Is it because Englishmen are believed to be all born politicians? Is it supposed that boys and girls will learn about local and national government from the experienced citizens, their fathers? It is a poor kind of instruction that comes to most of them in this way. Knowledge of the form of administration reaches them by haphazard, imperfectly, and a just appreciation of the great and intricate organization of the national life comes, perhaps, to the majority not at all. Yet, since such appreciation is an essential part of the equipment of the competent citizen, we urge that national organization should be to some extent studied at school; we urge, indeed, the claims of civics, a branch of study which deals with this and kindred matters, to a place in the ordinary school curriculum.

The increased need to-day for a study of this subject is so obvious that it hardly calls for remark here. Many thinkers have no hesitation in asserting that selfishness displays itself far more openly to-day than in the past; the common good hardly appears in our calculations. However this may be, it will hardly be disputed that political life to-day is chaotic as never before. We may attach little value to the old, clear-cut party lines and the old, definite watchwords, but they did imply some definite theory of the State and of the duties of the citizen. Now they have almost disappeared. New parties arise on every hand. New cries perplex one. The constitution built up through so many centuries is itself challenged by some. It becomes all the more worth while, therefore, to give children, the citizens of to-morrow, a little insight into the fundamentals of political life.

The responsibility that rests upon teachers here, as elsewhere, is considerable. While parents, it is true, are actively engaged in politics, a comprehensive view of the political world will hardly come from them: it must be supplied at school. While, again, many parents are themselves the best of citizens, they do not, as a rule, put before their children the ideals of citizenship: and such exposition, ethical in itself, must be given at school. The development of character, therefore, which has always been accepted as a prime aim of the teacher, is seen in this aspect to involve the inculcation of the spirit of duty for duty's sake—the recognition of duty to others and to the community; and it includes, too, the fostering of a spirit of enthusiasm for one's duty. But "enthusiasm is not taught—it can only be caught"; and, if teachers are to be successful in urging disinterested service for the community, they must themselves feel keenly the paramount need of this.

In practice, it is an open question whether set lessons in civics should be introduced into the school curriculum. Some follow out the line of thought just indicated by maintaining that the spirit of citizenship should be found in all lessons, but no definite lessons in the subject given. Opportunity continually arises, they say, for presenting the point of view of the good citizen, as well as for discussing present-day problems, and the facts necessary to an understanding of these can be incidentally supplied. Others, while fully agreeing that, at every point in school life the ideal of disinterested service can be held up, yet maintain that a definite period should be allotted for instruction in civics. It has sometimes been assumed that the history lesson affords sufficient opportunity for a study of citizenship; but this is not very reasonable. The historical student may, on his way, acquire a good many facts as to the origin and development of present-day institutions; but this, at its best, is a kind of incomplete synthesis; it by no means gives him a complete view of the political world of to-day, of which an analysis is required. Such facts, again, are not, in historical studies, connected with one another, and tend to lack the interest they would possess if all joined together to represent the cosmos in which a child knows himself to be placed. And, further, in the lesson in history, more or less strictly understood, there is little place for consideration of the motives,

principles, and aims of the good citizen. History deals primarily with facts; here are questions involving discussion, theories, and demanding—dare we say it?—a certain didacticism on the part of the teacher.

A rough survey indicates that the need of instruction in civics is being increasingly recognized. For many years now some attention has been paid to it in elementary schools, and various handbooks have been issued. In the Scout movement, training towards citizenship is outlined in a comprehensive syllabus. Theory and practice, as usual in Scout work, go hand in hand, the qualities of the good citizens being developed not only by instruction, but as well by action. Thus, a boy receives training in leadership and responsibility by his work in a Scout patrol; the spirit of unselfishness inculcated in him shows itself in the good turns that he does; service for humanity shows itself in the efficiency with which, in cases of accident, he renders first aid. In a pregnant foot-note, General Baden-Powell says: "The sacrifice of time and pleasure, and the refusal of tips or reward of any kind, in preparing for and performing these duties, is an important point in the training. It is a first step in education towards self-sacrificing patriotism."

A number of secondary schools include civics as a separate subject in their curriculum: indeed, civics has found a place at once in the syllabuses drawn up for the day continuation schools now coming into existence all over the country. The treatment of the subject generally adopted is on simple lines; local and central government are explained; the relation of the individual citizen to each, and the question of the fitness of a person to perform a citizen's functions. In some schools a commendable effort is clearly made to reach fundamentals, "liberty and the consequent renunciation," and "the development of a spirit of law" occasionally figuring in the courses.

Nor is it only in the Scout movement that practical training is given. Self-government, an experiment in some schools to-day, is an experimental training, for one thing, in citizenship. The school is a microcosm of the world. In some schools there is a division of pupils into full citizens, disfranchised citizens, and the junior school, the full citizens alone having the right to vote in school elections. The prefects have large powers, extending even to corporal punishment. The particular point emphasized in some of these schemes is that the sanction behind the prefect's actions is not the power of the head master, but the public opinion of the school. And the school parliaments which have been established in other schools aim in the same way at developing in boys and girls a sense of the relationship to the corporate life of the school, their partial responsibility for its history, and at thus giving some preparation for citizenship of the wider world into which, as adults, they will enter.

Those who are actively interesting themselves in this subject may be glad to know of some of the steps that are being taken to secure for civics the prominence it deserves. The British Association last year appointed a strong committee on training in citizenship, under the chairmanship of Bishop Welldon. An interim report* has already been issued, and in it is included a syllabus of theoretical instruction which is to be expanded into an authorized textbook on civics. The Patriotic Conference Committee definitely exists to promote "continuous and progressive patriotic education by which all available influence may be brought to bear upon the youth of the country with a view to their becoming good patriotic and efficient citizens." The Catholic Social League has issued a valuable guide for social students. The Civic Education League organized recently a Summer School of Civics; and organizations similar in aim to this are the Citizen Studies Association, the Civic Education League, and the International Moral Education League. Finally, in the objects for which the Schools Personal Service Association has been formed lie the ideals, furtherance of which has been discussed in this article: "To educate boys and girls in such a way as will lead to the betterment of social relations and contribute to the solution of social

problems, and to develop in young people clear conceptions of social rights and duties."

CORRESPONDENCE.

A PEDAGOGUE'S COMPLAINT.

To the Editors of the Journal of Education and School World.

SIRS,—At the summer meeting of our Old Girls' Association I was talking to a former pupil, home from Oxford, and, after hearing of the delights of river picnics and unlimited reading, I asked, "What will you do when you leave college?" Her enthusiasm flickered out as she replied vaguely, "Oh, teach, I suppose." Evidently the prospect did not appeal to her, but she was living too much in the present to take her career seriously. Our talk was interrupted just then, or I might have suggested that she was quite unsuited to the life, and that her eager temperament would feel most keenly the disadvantages of the profession. Many girls drift into teaching as the easiest opening for university women, and it is a pity that experienced people are not more candid about the drawbacks of school work.

Of course, the position of women teachers is very different from what it was twenty years ago; it is less precarious than journalism or secretarial work, and the salaries compare favourably with those of other professions. The long holidays, too, offer tempting opportunities for travel and experiment.

On the other hand, teachers will declare that they *need* the long holidays, because their work means constant strain. If they teach whole-heartedly, they are giving out all the time; they are always using up their nervous force, and they have little energy left for other interests after school. One of their terms is far more fatiguing than three months' secretarial work, and this is partly because teaching cannot be dismissed when school is over. Preparation, corrections, and school functions claim most of the evenings, and debar the mistresses from sharing the normal life of other people.

Another cause of strain is the monotony of the life; week in, week out, the days are regulated by bells, and spent in going over ground that has been trodden hard by use. School teaching combines in a trying fashion the demands of mechanical and imaginative work. Method is even more needful than sympathy; but the very efficiency of the machine can be soul-destroying in its tedium. Of course, other professions have their rules, but they are all more subject to currents from the outer world. A secretary may open her employer's letters at a fixed hour every morning, but each post brings variety, and she has the constant stimulus of new situations. The lady almoner is always seeing fresh faces, and each day she has the privilege of helping to alleviate some hard case. Without making any special effort, many women workers are in the main stream of human affairs, but the teacher feels that she is in a backwater, and that to keep a broad outlook she must rely on her own keenness and general reading. She is like the gardening specialist, who is so fully occupied in the hothouses and potting-sheds that he cannot enjoy the careless plenty of the fields.

In Charles Lamb's essay on "The Old and New Schoolmaster," another privation is vividly set forth. Here is the gist of the schoolmaster's complaint: "We are surrounded by young and, consequently, ardently affectionate hearts, but we can never hope to share an atom of their affection." Nowadays many teachers would consider this an exaggeration, unfair both to themselves and their pupils; but the truth remains that, even under favourable conditions, the teacher does not see children in their most natural or charming moments. She has tantalizing glimpses of character without being able to know any of the children as they deserve to be known. She may long to do this, but there is something in the relationship which sets up a barrier. A girl of thirteen is spontaneous with her old nurse, but not with her class mistress, and the teacher she adores may have fewer glimpses of truth than those who are less favoured. The sudden fancies of childhood and the finer shades of adolescence are not called forth by school work. A mistress who is teaching a class of thirty, with examinations in the background, has to encourage concentration rather than spontaneity. To those who really care for children, the special hardship of school life is that one deals constantly with them without being able to set up an easy human relationship.

Another disadvantage of the profession is the social isolation it brings. The majority of teachers have to accept posts in places where they are strangers, and they often find that the only society open to them is that of other members of the staff. The residents of the town may not be unfriendly, but their social life is already a complex thing, depending on kinship, interest, and old ties. The

* Published by the British Association, Burlington House, price 2s.

high school mistress comes for a few years, perhaps; her nearest friends are elsewhere, and she is bound to remain an outsider. Thus she has no social life during the term, and gradually she loses touch with her own circle at home. To a woman who is keenly interested in other people, this is a real privation, and she sometimes feels that the narrowness of circumstances is cramping and starving her sympathies.

It is better to admit frankly that the drawbacks are very great, and that nothing makes up for them but a real love of teaching. Girls act unwisely when they go in for school work merely as a livelihood, for the honest intention of fulfilling a business contract is not enough. The conditions do not make for happiness, and only enthusiasm can transform them. Something akin to the missionary spirit is needed in school work, for its problems are so delicate and far-reaching that no other attitude of mind has the necessary firmness and patience. As time goes on, teaching becomes unbearably wearisome without this inner light; but a sense of vocation changes everything and bestows the long-sighted humour that is needed in all real work, and especially in what Ian Hay calls "the most richly rewarded profession in the world."

LOOK BEFORE YOU LEAP.

THE HYGIENE OF FOOD AND DRINK.

To the Editors of *The Journal of Education and School World*.

SIRS,—The Board of Education has recently issued a Syllabus of Lessons for Use in Schools, entitled "The Hygiene of Food and Drink" (H.M. Stationery Office, price 2d. net). It consists of four sections, devoted respectively to "The Use of Food and Drink," "Alcohol," "The Misuse and Abuse of Food and Its Results," and "The Misuse and Abuse of Alcohol," and, so far as it deals with alcohol, it is based on the conclusions of the Medical Advisory Committee on Alcohol of the Central Control Board (Liquor Traffic).

The preface of the Syllabus states that the Board of Education first issued a "Temperance" Syllabus in 1909, but it has not hitherto recommended that "Temperance" should be regarded as a separate and distinct subject of the curriculum. The Board, however, consider that, in view of the more important and comprehensive character of this syllabus, local education authorities should take such steps as are practicable to give it an appropriate place in the curriculum of the schools for which they are responsible, whether instruction is given by members of the ordinary school staff or by specially appointed teachers of hygiene.

The power of the teaching profession to impart principles of sound morality and good citizenship in the children entrusted to their care is immeasurable, their opportunities are unequalled, and their personal influence is beyond question enormous. Recognizing this, as we do, and being impressed by the need that the children of our land should receive wise and careful instruction on temperance during those years when their minds are most receptive, and in those helpful conditions which are not to be found elsewhere than in the schools, we venture to hope that members of the teaching profession will be everywhere willing even to add to their already onerous duties, in order that they may take their share in promoting that sobriety which we all so much desire to see established in this land.—Signed, on behalf of the Temperance Council of the Christian Churches of England and Wales,

Amberley House,
12 Norfolk Street, Strand, W.C.2.

H. H. CROYDON,
Chairman of the Council.

FOREIGN AND DOMINION NOTES.

FRANCE.

There is a voice abroad that the nations of Western Europe are decadent, are moribund, are building already their own funeral pyres. We close our ears to it. Nothing can effect the extinction of a nation except racial decay, and at least the Anglo-Saxon race, so we firmly believe, has not yet even reached its full vigour. But both France and England are passing through a period of enervating sloth. Now, as the French children were told in the manifesto read to them on August 2, 1919, to commemorate the entry of France into the Great War: "Un peuple qui s'endort ne se réveille plus. Il n'y a que les morts qui ont le droit de se reposer." Whence comes the tendency to doze? Mainly from the fact that shortened hours of labour and the early closing of shops too often leave young and old with much unprofitable leisure—leisure quickened by no sort

of physical or mental activity. The great need of France and of England is to turn this leisure to account. The adult must be taught—be it Spanish or shorthand, Dante or the Differential Calculus; in Japan men take their bald or grey heads to school gladly. The adolescent must be drawn to manly games (played, not watched), lectures, educative excursions, moving pictures instructive in aim, and to the stimulus of the continuation school. We commend this urgent matter to the immediate attention of Mr. Fisher. We have never attacked him; on the contrary, we feel thankful to him for much, and therefore give him a word of warning. The results of his reforms are to be "apparent a generation hence"; he finds it convenient to forget that one generation slips through his hands, and a new generation begins, every day. That is the vulnerable spot in the Siegfried of Whitehall; there Hagen will look to strike him. Meanwhile he is our leader, and we ask of him a trumpet blast to rouse the nation from its indolence.

Intellectual France is quite conscious of this need for excitation.

Consciousness of France. "La victoire est funeste à qui s'endort sur ses lauriers," cries one writer (*L'Education*, XII, 6), in the spirit of the manifesto just quoted. Another desiderates leaders capable of moving the mass, for: "Le jour où les êtres d'élite, hommes et femmes, descendront dans l'arène et parleront en maîtres aux foules qui gigotent dans les dancings ou qui se vautrent dans la paresse, ce jour-là nous entrerons dans les temps nouveaux dignes de la victoire que la France a gagnée" (*L'Ecole et la Vie*, IV, 4). Victory has no fruits that grow spontaneously; inertness has no joys and Schlaraffenland would be a dismal place of abode—which things all schoolmen should now be teaching with might and main.

The school has had hitherto a weakness, indicated in an article on "La formation professionnelle dans les Ecoles primaires supérieures," to which the *Revue pédagogique* (LXXVII, 10) gives prominence. Geography, history, literature, social and political economy, have remained generalities, without sufficient relation to calling. It is told that a young workman, having made acquaintance during a long illness with classical culture, killed himself; for the ideal of life revealed to him thus was in such contrast with his actual life that despair overwhelmed him. The ideal for the workman should be his own life transfigured; he should find in the books that he reads his vocation enlarged, its social significance extolled, and his milieu explained. The literature of work should fill a conspicuous place in instruction. Classical literature was contemptuous of the shopkeeper and the artisan; the nineteenth century recognized the heroism of the poor; the twentieth, with more precision, puts in honour *les gens de métier*, the labourers in any trade. The literature of work, already rich and varied, will become more so as it is realized that work is a dominant social fact in modern civilization. It will help to give that joy in work which is the highest form of wages, nor yet leave distaste for other and more delicate spiritual fare.

GERMANY.

Founded in 1905, the International Lehrerbureau served to link together various associations of teachers. Having suspended its activities during the war, it still awaits the restoration of industrial peace to resume them. Meanwhile Socialist teachers have founded a separate "Sozialistisch-Pädagogische Internationale," generated by Frenchmen and Italians at Bordeaux in August, 1920. Allies or constituents of this are the "Verband sozialistischer Lehrer und Lehrerinnen Deutschlands und Deutsch-Oesterreichs" and "La Centrale du personnel enseignant socialiste de Belgique," the seat of the former being at Neukölln (Berlin), whilst at Aschaffenburg is located a "Pedagogia ligo internacia," of uncertain relationship. In so far as such bodies have political aims they lie beyond our purview; nor is the classroom a fit place for political propaganda. But an internationalism of sentiment, resting on the sympathetic study of nation by nation, will make for peace and may begin in the school. It was a lack of sympathy that brought woe to the Germans: they studied their neighbours in order to deride them.

Of the German pedagogic world to-day dissidence is the chief characteristic, and the most notable cleavage is caused by religion. Abstaining from comment, we attempt to make the state of things as to this clear. The new German Constitution, it was before told, contemplates religious schools, denominational or omnidenominational, and purely secular schools (*weltliche Schulen*). The demand for secular schools seems to be growing in strength. From West Germany is reported a movement to obtain a number of such schools by April, 1921, at the latest (*Deutsche Lehrerzeitung*, XXXIII, 40). In Berlin, an assembly of 1,500 or 2,000 school children made a

demonstration in favour of the *weltliche Schule*, amid a multitude of admiring parents (*ib.*, 41). The *Leipziger Lehrerzeitung* (XXVII, 33) gives its front place to an article, "Um die weltliche Schule," the writer of which contends that the secular school will be neutral, and not hostile to religion, and that the *Volkschule* would be ruined if it were broken into a number of sectarian and non-sectarian establishments. *Vorwärts* (No. 237) publishes a manifesto of the Social Democratic Party in Greater Berlin urging that, under Prussian law, every child of thirteen has the right to decide for himself whether he will receive religious instruction or not; that in no case may such instruction be given to a child without the expressly declared wish of his parents or guardians; that the instruction must be imparted at the end of the day and for not more than two hours in the week; and that the injustice of compelling parents who refuse religion to pay for the teaching of it can only be remedied by the general adoption of the secular school. The best basis of moral education for children, says *Vorwärts*, is moral life in the social community; where a substitute for religion is sought, it may be found in *Religionskunde* (religion treated as a branch of knowledge) or *Sittenlehre* (ethics). It does not appear that either Reverence or Love is a considerable element in any modern German scheme of religious education. But there is an increasing tendency towards *religionsgeschichtlicher Unterricht*, the teaching of religion in its historical aspect. From October 1st this form of teaching was introduced into some of the Berlin schools. The scheme of it contemplates for *Sexta* (the lowest form) stories from the religious life of primitive peoples, and of the Greeks and old Germans; in *Quinta*, stories from the Old and the New Testament and from the Koran; *Quarta* reviews the ancient religions already studied; to *Untertertia* is assigned the history of Israel, with parallels drawn from Babylon and Egypt; then in the highest three classes there is a transition to philosophy, to questions of *Weltanschauung*, and to a consideration of the nature and truth of religion. To sum up, whilst many Germans still stand for the Christian school, the majority, as it seems, is made up of those who would either eject religion from the school or tolerate it there only as an emotionless *Wissenschaft*, a chapter of science.

With theology we have no more to do than with politics; yet we risk excommunication and say that, if German

Allerlei.

schools and English schools should teach it as a doctrine of religion that the pure life and the joyous life are one, they would be doing well, and not ill. We pass on and proffer some miscellaneous scraps of educational news. (i) On August 24 died Heinrich Wolgast, accounted a pedagogic leader. He held that religion, a factor in culture, belonged to history; that the Bible was to be treated side by side with German literature; and that scriptural stories had no higher claims in education than German *Märchen*.—(ii) In October the "Verband sozialistischer Lehrer und Lehrerinnen Deutschlands und Oesterreichs" decided to found a free Teachers' Trade Union.—(iii) At its recent session the "Bund entschiedener Schulreformer," or League of Radical School Reformers, demanded the *Produktionsschule*, the production school, a school in which productive work shall be combined with instruction and gymnastics.—(iv) The proposals of the Reichsschulkonferenz, or Imperial School Conference, on School Government (of which we have just received the full report) are to this effect: (a) For government by some person of authority is to be substituted *kollegiale Schulleitung*, or government by the teachers collectively; (b) at meetings of teachers the *Schulleiter*, or Conductor of the School, presides, but he is not the superior of the rest; (c) in supervising the internal affairs of the school, he is accountable to the whole body; each teacher is responsible for his own work; (d) the conductor of the school is chosen by those who maintain the school from a list of three submitted by the teachers; (e) his office is unpaid, but he receives a certain exemption from other duties.

UNITED STATES.

From the wearing of a uniform American soldiers are to get the joys and advantages of education. The *School*

Laeti phaleris omnes!

Review (XXVIII, 8) tells of what is being done for them. Enlistments in the Army have been going on since the close of the war, with the promise held out to the men that they shall receive in addition to military training an opportunity to learn a trade and to study some general subjects of the kind taught in academic institutions. Congress has made provision for instruction in the army schools. In addition, there are provided in the camps the quarters in which classes can be held and in which shops can be set up. There is a very unusual equipment for shops easily accessible in the remains of war-time mechanical appliances, tools, and materials. A central training school for teachers was held at Camp Grant during the summer.

To this training school came camp directors and teachers from all of the Army schools, whilst five hundred soldiers went to school as objects for model teaching. It is a noteworthy fact that many of those who enlist are illiterate or are unable to speak English; the camp removes their disabilities. For all the trained men there is work easy to be got at higher wages than they ever earned before or could have hoped to earn without the training.

The National Education Association has been reorganized. It is described by *The American Teacher* (IX, 6), the organ of the American Federation of Teachers, as "our national rival." The Federation continues to push the policy of allying teachers with Labour, and the American Federation of Labour urges "the affiliation of the teachers with the great democratic force of organized Labour, which was the pioneer in the agitation for tax-supported public schools in the United States in the first half of the last century, and has ever since proved the steadfast friend of public education." It is not an affiliation which, so far as England is concerned, we have found ourselves able to approve. The strength and influence of the American Federation of Teachers we have no means of estimating.

INDIA.

We are interested in Teachers' Guilds wherever they may be.

The Madras Teachers' Guild; and the Madras Act. The Conference of the Madras Teachers' Guild (the Report of which comes to us late), held last March, showed that the twenty-five-years old association was full of vigour. Resolutions were passed (1) That this Conference accepts the principles of the Madras Elementary Education Bill; (2) That this Conference requests the Government (i) that, in the interests of education, the status of teachers in secondary schools be improved by giving representation to them in the Senate and other representative bodies; (ii) that, in view of the increased cost of living, immediate substantial relief be given to teachers of all grades, and their scales of salaries be raised; (3) That this Conference is of opinion that the time is come for the Government to establish many more schools—elementary and secondary—for girls in this Presidency, and prays the authorities that they would come forward to take action in this behalf and offer liberal incentive to private benefactors who might be willing to co-operate; (4) That this Conference approves of the formation of a Board of Secondary and Intermediate Education on the lines indicated in the Calcutta University Commission Report. Of the Madras Education Bill (now become an Act) referred to in the first resolution, a main feature is the creation of District Educational Councils to invite and direct the co-operation of all agencies, public or private, engaged in providing elementary education, and to advise the Department of Education. The Act is permissive, and it is left to the discretion of local bodies whether or not they make elementary education compulsory in their areas.

NIGERIA.

The Annual Report of the Education Department, Colony and Southern Provinces, for 1919, laments that the work was hampered during the year by the continued shortage of European staff. Teachers are not well paid and the supply of them is inadequate. The demand for educated boys is larger than that which the schools can meet. But the attendance at Government and Assisted Schools has risen from 15,478 in 1915 to 21,777 in the year under review. We observe with amusement that Nigerian boys will in many instances leave school if they are not promoted to a higher class. That is one of the forms of "self-determination" which England is seeking to control through the action of obligatory continuation schools.

UNIVERSITIES AND SCHOOLS.

SCOTLAND.

The triennial election of Lord Rectors by the students of the universities and the ceremonies accompanying the official address of the successful candidates, which usually take place in the opening weeks of the new session, are the most picturesque happenings in Scottish academic life. This year there have been two addresses and one election. At Aberdeen, Lord Cowdray discoursed suggestively on

THREE GOOD THINGS FOR SENIOR SCHOOLS.

(1) THE OXFORD "IDEAL" LOOSE-LEAF NOTE BOOK.

Costs about the same as an ordinary Note Book and does the work of FIVE or SIX. Elastic to any extent, and leaves transferable in any manner without risk of disarrangement or loss. No mechanism whatever, and no rings, posts, or staples. Holds 1 or 250 sheets with no lost bulk. The master can retain possession of any part of the current work of the whole class, whilst each pupil retains the remainder of his own. Special editions for Science and Engineering Classes.

Showing the manner of changing leaves.

(2) THE "IDEAL" FOLDING LOCKER DESKS.

Combines requirements of Private Study Classes, Hand Work, Typewriter Class, &c.

Capacity:—

SIZE—30 ins. high,
 24 ins. or 36 ins. long,
 17 ins. back to front.

Folds to 6½ ins. depth.

Locker Capacity, 900 or
 1500 cubic ins.

Lock and Key.

Can be used either sloping as a
 Desk, or level as a Table.

Also with Book Trough in place
 of Locker at reduced cost.

Folded to 6 ins. depth for storage.

(3) THE "IDEAL" SINGLE OR DUAL COMBINED DESK, TABLE, AND BENCH WITH LOCKER.

For Private Study Classes, Typewriter Class, Hand Work, &c.

30 ins. high, 36 ins. long, 17½ ins. back to front.

The lid of Locker Desk can be erected to a rigid position level with rest of Table Top.

Price List and Terms on application.

WILLIAM HUNT,
 SCHOLASTIC STATIONERY and
 FURNITURE MANUFACTURER,
 18 BROAD STREET, OXFORD.

"Labour: Its problems and the ideal wage," trying to evolve from his experience as a great employer a scheme for the reconciliation of the diverging interests of masters and men. Earl Beatty, as Lord Rector of Edinburgh University, with equal appropriateness, took as his subject "Sea Power," and revealed an historical and political insight worthy of his great achievements in the North Sea. Following close on Earl Beatty's address, at the very end of his tenure of office, came the election of Mr. Lloyd George as his successor with a very large majority over Prof. Gilbert Murray, his Liberal opponent. It is a curious fact that, while there have been a large number of Prime Ministers in the Rectorship of the universities, Mr. Lloyd George is the first to be elected during the occupancy of the Premiership.

Last year the number of students matriculating at the universities beat all previous records. This year there is a further increase. Edinburgh, in particular, shows an extraordinary enrolment. Last year there was a total of 4,643 students. Now there is a prospect of over 5,000 before the year is done. And with all this, hundreds of students in medicine and science have been turned away for lack of accommodation. It is rather a surprise to learn that this large influx of students has been adding to the financial embarrassments of the universities. It was generally believed that the plan of staffing these institutions with lecturers getting salaries from a fifth to a half of the ordinary professional salaries made the large classes a paying concern. But, according to the Vice-Chancellor, Sir Alfred Ewing, who presumably speaks for all the centres, this is not the case. It seems that the provision of laboratories and other practical facilities has caused such a serious drain on their funds that it has become necessary to consider the question of raising the fees. A conference of representatives from the four university courts, held at Perth, on November 6, for the discussion of this proposal, has recommended an increase of 50 per cent. on the fees for Arts and Science and an aggregate increase of from 33 to 50 per cent. in Medicine.

Sir D. M. Stevenson, one of Glasgow's wealthy socialists and a former Lord Provost, has intimated his desire to give Glasgow University £20,000 for the establishment of a university department for training in citizenship. He proposes that the gift should be used for the establishment of a Citizen's Fund Trust to create a lectureship or alternatively a chair of citizenship for the delivery of courses of public lectures, both in the University and in the city.

Both inside and outside Parliament the critics of the Education Act show a persistency in their attacks on the cost of education which, if turned against high prices elsewhere, might have some useful outcome. The constant repetition in certain newspapers of the charge that money is being "squandered" by the new education authorities has now been taken up by various members of Parliament, and Mr. Munro has been regularly beset with questions on the subject. The parliamentary questions for the most part are as discreditable as the newspaper campaign. The one substantial grievance on the score of inequity of rating—which applies to all the rates and not merely to those levied for education—is magnified far beyond its importance; and a comparatively few hard cases are constantly kept in evidence as if they were typical. The Secretary for Scotland is called on to note that the cost of the Act per scholar per annum in Hounam in 1918-19 was £8 and is now £18. 1s.; that in Gargunnoch it was £6 and is now £37. 17s. 6d.; that in Fenwick it was £1 and is now £16, and so on. The obvious moral, sometimes pointed by the questioner, is that the Act should be suspended or repealed. Mr. Munro meets all the questions firmly, sympathizes with those parishes hit by unequal rating, but declines to consider repeal in any form. It is difficult to believe that this parliamentary clamour is anything but stage thunder, for the edification of ignorant constituents. That is indicated by the conclusion reached by a meeting of Coalition M.P.s called to consider the rating problem. The common sense of these M.P.s is manifest in the published statement that a resolution "to the effect that the raising of the school age and the institution of continuation classes should be deferred until Parliament sanctions their being put into operation" was not pressed. Of course not! With one or two exceptions the Scottish members, irrespective of party, realize the importance of the Act too well to lend themselves to this base outcry.

Recognizing the growing feeling against the Education Act, Mr. Munro's Reply to the Critics. Munro has very wisely given a detailed answer to his critics at a meeting of Scottish M.P.s of all shades of opinion. The case, as he presented it, was strong; so strong, indeed, that it is difficult to believe that any reasonable person present remained unconvinced. His main contention was that, except for the cost of bringing the voluntary

schools into the national system and paying Catholic teachers like other teachers, there was not an item of any consequence in the increased expenditure of to-day which would not have had to be increased by the school boards had they continued in existence. Teachers' salaries, which accounted for an expenditure of four millions in 1918-19, were estimated to reach seven millions in the present year. But that increase was absolutely necessary. Surely it was right that a trained teacher, who could not earn a single penny until he was twenty-one or twenty-two years of age, should be remunerated at a rate not less than that given to a policeman or a scavenger. Then Mr. Munro turned his guns full on his opponents. The rural rate-payer, on whose behalf complaint was being made, was really getting an excellent bargain. In rural counties the highest rate was half-a-crown in the pound on gross valuation. This meant that the typical rate-payer who now paid £15 a year for his house only paid 18s. 9d. for educational rate, in return for which he got, free of cost, the complete education of his family, school books and stationery, special facilities for the conveyance of his children and for their board and lodging if he lived in an out-of-way locality. Mr. Munro concluded by repeating his personal opinion that the time had come for a Scottish rating inquiry.

It is evident from the reports that are to hand of teachers' meetings in different parts of Scotland that for the time being, at least, teachers are tired of talking about the salary question. Subjects of professional interest are evidently coming back to their own. The President of the Institute has been speaking in different centres on various aspects of self-government in the teaching profession. Another theme of general interest is the character of the new intermediate schools which must be created when the school age is raised to fifteen. Unfortunately there is considerable likelihood that the publication of the Burnham Report may bring back salaries into the focus of interest once more. Scottish teachers can scarcely be blamed for making comparisons between their own scales of a year ago and the English scales of to-day. But they will be well advised to leave such advocacy of their case as is needed to their representatives on the Joint Council of teachers and authorities.

The appointed day for that section in the Education Act relating to the employment of children coming into operation has been fixed by the Education Department. After January 1, 1921, children under thirteen can only be employed on school days between the closing of school and 6 o'clock, and on other days between 8 in the morning and 6 at night. The same section prohibits street-trading by children or young persons under seventeen, and this is also included in the order.

Many good people in Scotland are deeply distressed by reports which have appeared in the press regarding the activities of an institution rejoicing in the curious name of the Proletarian Sunday School, and reported to be strongly established in Glasgow and other Scottish towns. Probably these schools would have remained in the impotent obscurity they deserve had it not been that they were brought into the limelight for propagandist purposes just before the municipal elections. A comical version of the Proletarian Ten Commandments and extracts from still more comical proletarian hymns were published to show how dangerous it would be for the community if certain people were elected. These "revelations" have provoked much comment, from which it appears that this type of Sunday school is the outcome of an extreme revolutionary movement which is as antagonistic to the Labour Party as to the established order in Church and State. Only by a confusion between the Proletarian Sunday School and the older Socialist Sunday School which, with all its limitations, is neither revolutionary nor anti-Christian, has the former appeared of any account. Even on Clydeside, where strong views sometimes flourish, the number of Proletarian disciples is insignificant.

WALES.

On Monday, November 15, the Council of the College presented its first annual report, which supplies ample evidence that already substantial progress has been made, and that the future is full of hope and encouragement. All classes of the community have rallied round the College, and evidence is already forthcoming that it may depend on securing ample financial support to meet its requirements. Most of the great works in the immediate vicinity of the borough have pledged themselves to provide annual subscriptions, varying from £125 to £500 per annum; while efforts will soon be made to organize subscriptions from working men. Of course, at

present the total of donations and annual subscriptions cannot be estimated, nor can the share of the pooled funds of the University of Wales which the University Council will allocate to the College. The total number of students enrolled is eighty-nine (eighty-one men and eight women), of whom fifty-five were former students of the Swansea Technical College. The College Senate has laid much stress on extra-mural work; and it is proposed to organize a further extension of this work in the adjacent towns of Neath and Llanelly, in order that the influence of the College may be as widespread as possible.

Dr. R. Franklin Sibly, the Principal of the College, in his inaugural address, referred to their indebtedness to the pioneers of university education in Wales, notably Sir Hugh Owen and Principal Viriamu Jones.

The Swansea College was called for originally as a science college, and it will be mainly in the domains of science and the practical application of science that a large part of its mission will be discharged. But in scientific research there is true humanity, and the scientific spirit produces an ennobling influence. The former inculcates the ideal of research for truth and the great principle that the search for truth is an achievement, while the scientific man adds vastly to the wealth of the world. It was, however, intended next session to open an arts section, and he hoped the incorporation of the Swansea Training College would be an accomplished fact before the year is out. It is proposed to provide full four-year courses for men as well as women, and also to preserve the two-year course for a considerable number of students. In their relationship with the schools the College will aim at the closest co-operation, and one of the most interesting of the tasks to which the Principal looked forward was that of remodelling many of their courses in conformity with the recent advances in secondary education. In this way it is expected that the College staff will be relieved from a great deal of work which more specially belongs to the school, and thereby be enabled to devote more of its energies to research work, which is the special function of the university teacher. The Principal also dealt with the importance of fostering Celtic studies, as they worked primarily for Wales, though he emphasized also the wholesome truth that it was their duty to study the trend of thought in other countries as well.

Only a very brief reference to this report is possible in this

The Report on Secondary Education in Wales.

column, as it bristles with interesting suggestions and controversial points. As a historical summary of the development of Welsh secondary education the report is a most valuable document, and it will no doubt occupy a permanent place in Welsh educational history, as it is a storehouse of information based on official knowledge. But without doubt the most important contribution of the report to a right understanding of the function of the secondary school in Wales is that portion of it in which the committee discuss at great length the reasons for their recommendations. Even when we may disagree with their conclusions, it is impossible not to admire the care and the trouble with which the report has been constructed, and also at the same time not to recognize the fairness on the whole with which the committee have attempted to outline our advance in the domain of secondary education within the last quarter of a century. It cannot, however, escape notice that the references to the Central Welsh Board and their activities as pioneers in this field are generally somewhat unsympathetic and display an unnecessarily critical attitude. Whatever the shortcomings of the Board may be, it cannot be denied that it is mainly to their stimulus and energy that Wales has succeeded in organizing a system of secondary education which is generally recognized as highly efficient in every department, and as this result has been attained with very meagre financial resources, it is only right that the investigating committee should have placed on record their appreciation of the work which the Board have accomplished.

The committee recommend that a National Council of Education shall be constituted to replace the Central Welsh Board. Its powers, as defined in the report, appear to be somewhat nebulous, and there is no doubt that Welsh authorities will scrutinize them very critically before they will agree to the proposals. Its primary function is advisory and deliberative, though it is recommended that some administrative functions should be assigned to it by the Minister of Education. In fact, the first impression one obtains from the report is that the new Council will be a kind of consultative committee; if this is correct, our autonomy in education will be largely illusory, and Wales stands to lose much under the proposed scheme. To obviate this, and to ensure the continuance of our control over

(Continued on page 806.)

The Art of Voice Training.

Mr. F. C. FIELD HYDE

(Lecturer at the Royal Academy of Music; Author of "The Art of Voice Training," "The Singing-Class Teacher," &c.).

will conduct a HOLIDAY COURSE for Singers, Teachers, Choirmasters, &c., in London, from December 29th, 1920, to January 5th, 1921.

Twelve Lecture Demonstrations will be given of about 1½ hours each.

The Course covers the whole art of Voice Training, gives a critical review of the principal methods, shows how to deal with all the chief defects found in voices, and is illustrated by practical lessons.

It has the recommendation of many of the highest Musical and Medical Authorities, Principals and Professors of some of the largest Musical Institutions, the Editors of the chief Musical Periodicals, and of every student who has attended the course.

A member of a previous London Holiday Course wrote:—

"You solved, I might say, all my difficulties, and I don't regret having travelled the thousand miles, which I did, as the course was worth it."—J.R.

For full particulars, with Syllabus, &c., address—

Mr. F. C. FIELD HYDE,

2 WIGMORE STUDIOS, 52 WIGMORE STREET, LONDON, W. 1.

All Persons interested in Phonetics are recommended to join the

INTERNATIONAL PHONETIC ASSOCIATION.

Subscription 2s. per annum. Entrance fee 4s.

Members receive free of charge *Le Maître Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London, W.C. 1)

New Members receive in return for the Entrance fee: *The Principles of the I.P.A., What is Phonetics?* by H. E. Palmer, and *La Phonétique appliquée à l'Enseignement de la Lecture*, by P. Passy. — List of other publications and prices of back numbers of *Le Maître Phonétique* (from 1889) on application.

PHILIPS'
PRACTICAL COURSE
 OF
ENGLISH COMPOSITION

FOR
Middle and Upper Forms

By **W. J. GLOVER**

Author of "The New English Books."

In Two Books. Crown 8vo size, cloth.

Book I. 136 pages, **1s. 9d.**

Book II. 148 pages, **2s.**

THESE Books have been compiled with the view of providing a course in English Composition based on a collection of extracts from the **Standard English Writers**, and graded to meet the needs of pupils in

Central, Continuation,

and

SECONDARY SCHOOLS.

It is considered by the best Authorities that the faithful study of passages of striking yet simple beauty must stimulate the pupil's appreciation of the Art of Composition, and so affect his style.

In the words of **The Journal of Education**, such a course provides "the essential background of technical fundamentals, such as punctuation and accent, as well as an imaginative feeling for atmosphere and style."

By reason of the extensive and painstaking research represented by these Books, and the admirably chosen extracts from the

ENGLISH CLASSICS

upon which the lessons and the exercises are based, it is claimed for this Course that it is

WITHOUT EQUAL for the TEACHING of CORRECT ENGLISH.

Prospectus and specimen pages, or copies for inspection, on application to—

AN IMPORTANT NEW BOOK

A fresh handling of the subject, with many distinctive features.

A SHORT
**HISTORY OF THE BRITISH
 COMMONWEALTH**

BY
RAMSAY MUIR

Professor of Modern History in the University of Manchester.

VOL. I.

THE ISLANDS AND THE FIRST EMPIRE

(To 1763).

Medium Octavo, 824 pages, with Chronological Index. Cloth Boards, **17s. 6d. net.**

The story of the British Commonwealth, regarded as a single whole, but also as a part of the greater commonwealth of Western civilization. The story of a number of peoples gradually learning to live together in a free partnership, inspired by their common enjoyment of the institutions of political liberty.

To be followed by a Second Volume of similar dimensions which will bring the story down to the GREAT WAR.

Prospectus on Application.

"A standard work both for reading and for reference; he (Prof. Muir) has an excellent narrative style, a gift of lucid exposition, and powers of interpretation and suggestion. A book of this kind has been badly wanted, and the need has been amply supplied."—*Glasgow Herald*.

A COMPANION VOLUME TO THIS WORK IS

secondary education, it is therefore imperative that, at the proper time, the administrative functions of the new Council shall be duly safeguarded by statutory regulations and not left to the whim of the Minister. The Committee have endeavoured to solve the question of inspection in a very ingenious fashion, but it is not clear that the plan which is adumbrated in the report is likely to be workable. For, to all intents and purposes, the inspectors will be inspectors of the Board of Education, and the control of the new Council over them will therefore be very limited; and further, this system will almost inevitably result in the separation of inspection and examination, which is not unlikely to lead to considerable difficulties in administration and in the schools. We have no space to refer to other important recommendations in the report, though it is probable that, as the public gains a fuller acquaintance with them and expresses its opinion upon them, it will be necessary to indulge in some further comment.

The half-yearly meeting of this association of head masters and head mistresses of Welsh secondary schools was held at Shrewsbury, on Friday and Saturday, November 12th and 13th, with Miss M. A. Vivian (of Newport School) in the chair. There

were several important questions under discussion, such as the reports of the Departmental Committees on Salaries and Scholarships and Free Places. The former report was subjected to some severe criticism, and it was only after a somewhat heated debate that the Association ultimately agreed to accept it. The salaries for assistant masters and mistresses were regarded as fairly satisfactory, though there was a consensus of opinion that the scales did not err on the side of generosity, and that they are not a final settlement of the question. The Association also felt that the Committee had not been very successful in their methods of dealing with the salaries of head masters and head mistresses, though the inherent difficulty of the problem was recognized. Wales possesses schools which vary within wide limits as to size, so that the mere fixing of a minimum salary is not a very substantial help to a perplexed education committee when advertising for a new head master, and therefore a clearer guidance as to a suitable minima and maxima for different grades of schools should have been given in the report. Important as these reports are to the teaching profession in general, they do not, however, affect Welsh teachers as vitally as the other departmental report—viz. the report on

the organization of secondary education in Wales. A lucid summary of its chief recommendations was given by Mr. J. Walter Jones (Neath), but it was generally agreed that it was inadvisable to proceed with a discussion of them until the report had been studied more carefully. It will therefore be considered at a special meeting of the Association.

In her presidential address, Miss Vivian maintained that the present school hours are too long, and that they tend to overtax the vitality of the pupils, especially the girls. She therefore advocated a considerable shortening of the length of the school periods, though the head master of one of the largest of our dual schools dissented strongly from the proposition that girls are unable to stand the strain of the ordinary school hours as well as the boys. The head mistresses, on the other hand, were apparently inclined to agree with Miss Vivian.

Mr. Edmund D. Jones (of Barmouth School) was elected President for the year 1921.

Teachers in Wales from the elementary schools are dissatisfied with the scale of salaries proposed in the report, especially in the Rhondda and in certain parts of Monmouthshire. They threaten drastic action unless their demands are conceded, as they claim that the salaries suggested are wholly inadequate. The recommendations of the Burnham Committee as to salaries of teachers in secondary schools have not yet been carefully discussed, and therefore it is not possible to state how far they are regarded as satisfactory by Welsh teachers.

IRELAND.

The most important item of news for the month is the settlement of the salaries of teachers in national schools. As the result of a conference between the National Education Commissioners, the Irish National Teachers' Organization, and the Treasury, the following arrangements have been made. The normal basis for men is to be £170 rising by sixteen increments of £12 and one of £8 to £370; and for women, £155 rising by fourteen increments of £10 and one of £5 to £300. For existing men teachers in schools with an average attendance of between twenty and thirty, £170 rising by fourteen annual increments of £12 to £338; prin-

cipals of schools of ten to nineteen pupils £155, rising by ten annual increments of £10 to £225; and schools with an average of under ten, £155. Junior assistant mistresses will receive £110, rising by eight annual increments of £5 to £150; and junior assistant mistresses at present paid by capitation will receive £100. There will also be a supernormal scale consisting of five annual increments, as recommended in the Killanin report. In addition to these salaries, principals of schools in which the average attendance is thirty or more will receive capitation at the rate of 10s. per head up to a limit of 120 pupils, and 5s. per head for all over 120. Existing principals of schools with an attendance of under thirty will receive capitation at the rate of 5s. per head. In large schools vice-principals will be appointed and will receive a share of the capitation. Existing teachers will be transferred to the scale on lines recommended by the Burnham report, and every teacher will reach his appropriate place in the scale by April, 1922. For the present financial year a sum of £39 will be added to the existing salary and war bonus of each qualified teacher, and £10 in the case of junior assistant mistresses. The scale also includes special payments for degrees and other scholastic distinctions. The national teachers and the country may well be congratulated on the nature of this settlement. The next step for the Government to take is to settle in a similar manner the salaries of secondary teachers in Ireland, whose case has been admitted by the Chief Secretary to be far worse than that of the primary teachers.

The Schoolmasters' Association has held its annual meeting this autumn, and again passed a resolution in favour of the Education Bill, with the addendum that it would agree to any reasonable amendments likely to secure for it a quick passage into law. The Government, however, have given no intimation as to their intentions regarding the Bill. The Association further points out that the interim grant of £50,000 was quite inadequate to provide proper salaries, and that the rules for its distribution should have taken into account not only the number of pupils in each school, but also the number of registered teachers on its staff and their years of service. In dealing with intermediate education, the Association expressed its deep regret at the death of Dr. Starkie, Chairman of the Intermediate Board; and it further made certain suggestions as to the rules and programme. The chief suggestions were that drawing should be an honour as well as a pass subject; that all

the mathematical subjects should be grouped together, or that a student should count as passing in them all if he obtained an average of 30 per cent. in them all, and not less than 20 per cent. in any one of them; that two hours should be allowed for the arithmetic paper; and that the Senior Grade Honour papers in classics were too long. It also suggested that the number of hours in science in the Middle and Senior Grades should be reduced from five to four. It has, lastly, recommended to Trinity College to increase the marks for English in the Junior Exhibition Examination, and to consider the advisability of providing a new Honours Course, to consist of Latin combined with a knowledge of Greek, somewhat less than that now required for Honours, and a modern language, English, French, German, Italian, or Spanish. The new President of the Association is Mr. W. A. Fullerton, of Ballymena, and the Vice-President, Mr. J. McQuillan, of Larne.

The Ulster Head Masters' Association, besides dealing with matters similar to the above, has issued a statement on the present state of intermediate education. It points out that Ireland is being

Ulster.

denuded of some of her best teachers, who naturally preferred to work in a country which could offer a regular scale of salaries, with the certainty of a pension on retirement. Teachers in Ireland had no regular scale of salaries, and no hope of a pension, and, if this state of things were allowed to continue, the efficiency of even the most prosperous schools would suffer, and in many cases the schools would cease to exist or drag on a feeble existence with poorly paid and inefficient teachers. The only remedy for this condition of affairs was either the introduction of such a scale of fees as would exclude all but the children of wealthy parents, or the adoption of such a system of local and Imperial aid as would place the schools in a sound financial position and enable them to obtain competent and qualified teachers and pay them adequate salaries. There could be little doubt that the latter remedy was the only sound one from an educational point of view.

The Central Association of Irish School Mistresses is concerned about the low percentage of passes among girl candidates at the intermediate examinations this year, and protests against the raising of the standard in the junior and middle grades during the past three years. In the middle grade the percentages

THE LONDON LITERARY LOUNGE. THE BOOKSHOP THAT APPEALS TO BOOKLOVERS.

ITALIAN BOOKS.

With a view to making **Italian Books** more accessible to English readers than they have been hitherto, we have recently acquired a considerable stock of standard and modern Italian Literature, as well as grammars, dictionaries, and annotated texts in great variety. The art and music of Italy are represented, and a few of the leading periodicals are taken regularly. Every attempt will be made to advise and assist the student, and access may be had to the catalogues of all the important educational publishers. Classified lists of books in stock are now in preparation, and will be available for inquiries, together with information as to the Italian Book Society, of which the London Literary Lounge is the recognized centre.

REMAINDERS.

A large section of the English side of the business is devoted to Publishers' Reminders (books in new condition at **Greatly Reduced Prices**). A list containing many of the more recent additions to these interesting and valuable works may be had on application, but, as this only contains a small selection of titles, we should welcome inquiries or a personal inspection of our shelves.

HEADSHIPS.

PORTSMOUTH EDUCATION COMMITTEE.

(HIGHER EDUCATION.)

NEW SECONDARY SCHOOL FOR BOYS.

The Education Committee propose opening, in temporary premises, a new Secondary School for Boys in January next, and will require the services of the following staff:—

- (a) HEAD MASTER.**
- (b) ASSISTANT MASTER**, with special knowledge of French, German, or Spanish (a good knowledge of Commercial Geography desired).
- (c) ASSISTANT MASTER** for Mathematics, Physics, and Chemistry.
- (d) ASSISTANT MASTER** for English, History, and some Mathematics (a knowledge of Geography desired).

Candidates should be graduates of a British University.

Salaries according to the Burnham scale for Teachers in Secondary Schools.

Further particulars and forms of application may be obtained from the undersigned, to whom applications should be returned at once, accompanied by copies of not more than three recent testimonials.

H. E. CURTIS,

23rd November, 1920

Secretary.

of passes for the years 1918, 1919, and 1920, were respectively 59.4, 47.2, and 43; and in the junior grade, 53.5, 49.6, and 46. The Association protests particularly against the pass papers in mathematics, and urges that, as they were this year unduly exacting and demanded a degree of mathematical skill and ingenuity which the average candidate does not possess, they should in future be revised by an examiner with practical experience in teaching average pupils. In the middle grade, 46 per cent of the candidates failed in algebra and 43 per cent. in arithmetic; and in arithmetic there were 118 candidates who failed to obtain a single mark. This compares very unfavourably with the previous year, when 85.7 of the candidates passed in the junior grade, and these were for the most part the candidates examined in the middle grade this year.

The Intermediate Board have appointed Sir Samuel Dill, its Vice-Chairman, to be Chairman until the end of the present year. The place of Dr. Starkie on the Board still remains unfilled. At their meeting on October 20 the Board decided to take the necessary steps to have Cicero's "Pro Milone" put on the programme as an alternative to Cicero's "Second Philippic" for the Middle Grade Pass for 1921. Schoolmasters generally will agree that both these books are too hard for the Middle Grade Pass students, and both unsuitable for mixed classes of boys and girls.

The Senate of Trinity College, Dublin, have made an innovation by electing a head master as a member of the Senate. By electing Rev. C. B. Armstrong, Warden of St. Columba's College, they hope to bring the University more into touch with the schools. This is certainly a move in the right direction.

THE Classroom Portrait Gallery, of 7 Queen Street, London, W.C.1, has sent copies of collotype portraits of five famous physicists—Galileo, Sir Isaac Newton, Michael Faraday, J. Clerk Maxwell, and Lord Kelvin. The portraits measure 11 inches by 14 inches plus margin. They are attractive, and should meet the need for instructive decoration in classrooms and laboratories. The price is 6s. 6d. each, or 30s. the set, post free. We commend them to the attention of teachers of science.

PRIZE COMPETITIONS.

THE prize for the November competition is awarded to "Calvus"; and the second place to "Cyrano."

The winner of the October competition is Mr. Cradock-Watson, Merchant Taylors School, Crosby, Liverpool; but, as he gained the first place last January, the next in order, "Tartuffe" (Monsignor Provost Brown, the Catholic Church, Vauxhall, S.E.) will receive the prize.

Extract from Henri Bordeaux's "Le Pays Natal."

By "CALVUS."

Madame Mérens went on to ask for some details of the public meeting. The Count, seized with a fit of coughing, had to leave Lucien to reply.

"The candidate speaks from a terrace which commands the great square at Thônes. He sways conscientiously to and fro. Women weep, old fogies wag their heads with chuckles of admiration, and young folk wear the congealed smile of happiness on their faces. The words 'justice,' 'liberty,' and 'fraternity' rise up in the clear and resonant evening air. The hearers are spell-bound. There you are!"

"You're cutting it short," said the good lady, so as to please Annie. "I will go on, then. Picture the crowd—five hundred people: men in blouses or in their shirt sleeves, women with their clean holiday kerchiefs, all clustered under some big plane trees for shade: in front of them, in the sun, the terrace from which the orator, full in the glare, is launching his harangue. Do you want to have an idea of the candidate's eloquence? The weather was very hot. The sun was beating on James's skull. Some honest country fellow noticed this, looked about for a chair, heaved himself on to it, and set about sheltering our friend under a huge umbrella. Now James is an orator of the lively order. The poor dear fellow kept making desperate efforts to follow his movements, and to track his evolutions with the improvised tent. He kept frenziedly shifting the chair. The candidate flung himself about; the country fellow went through his antics; the umbrella described some masterly curves in the air. However, nobody paid any

(Halifax), J.B.

Class IV.—Handmaid, Wilfred, Lehte, Basblue, Nil Desperandum, Mineur de Charbon.

A Prize of Two Guineas is offered for the best translation of the following description of the collecting of seaweed in Brittany in "La Terre du Passé" by Anatole le Bras:—

Après une demi-heure de marche par des chemins rocailleux, ravinés comme des lits de torrents, brusquement, derrière un tournant de colline, la mer se montra; la mer! c'est-à-dire une vaste étendue informe, un chaos sinistre et convulsé, où des traînées de baves blanches striaient des ondulations de dos verdâtres. Très

loin, presque aux confins du ciel, un "feu" pâlisait. C'était le phare de la Vierge—semblable, en effet, dans l'indécision de l'heure, au fantôme long voilé de quelque déité des eaux, le front surmonté d'une étoile. Le jour, cependant, achevait de dissiper ces vaines apparences. Mais combien plus émouvante, peut-être, la réalité! Les grèves, d'où le flot se retirait en se cabrant, étaient à perte de vue, noires de monde. Et, de toutes les hauteurs voisines, par toutes les issues, de nouveaux cortèges débouchaient, sans discontinuer. Une fièvre singulière, une espèce de délire sacré, exaltait l'âme de cette foule, gagnait jusqu'aux attelages eux-mêmes qui, les naseaux dilatés, hennissaient à la mer.

Dès que les premières crêtes goémonneuses commencèrent de surgir, ce fut comme un élan irrésistible, toutes barrières rompues. Les femmes, au milieu de l'effervescence générale, donnaient l'exemple de la témérité; les jambes nues, les cheveux noués dans un mouchoir, leur jupe de droguet ficelée autour de leurs hanches, elles se précipitaient droit devant elles, provoquant les hommes de la voix et du geste, opposant leurs poitrines aux vagues et les labourant de coups de faucille, comme pour accélérer leur recul. Les charrettes, bondées de moissonneurs, de moissonneuses, avaient l'air, vues du rivage, de flotter ainsi que des barques remorquées à la nage par des chevaux marins. L'espace était plein de rires, d'appels, de cris, que dominait par intervalles une phrase hurlée en chœur comme une formule d'incantation:

—D'ar bézin!..... D'ar bézin glaz!..... (Au goémon! Au goémon vert!)

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on December 14, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Posts Vacant—continued.

Applications from intending purchasers are solicited for the following properties:

GIRLS' SCHOOLS.

Hants.—Girls' Boarding and Day School. Gross receipts about £3,000. 40 Boarders and 30 Day Pupils. Price for goodwill £1,000. Furniture at valuation.—No. 7,166.

Sussex (Seaside).—Transfer or Partnership. Old-established Boarding and Day School for Girls. Gross receipts over £2,000. Number of Boarders 32, fees up to £60 per annum. Number of Day Pupils 30, fees about 3 guineas a term. Rent of good house facing the sea only £105. The vendor will accept 1½ terms' fees by way of premium for goodwill. Furniture at valuation. Part purchase money down.—No. 7,169.

Cathedral City.—Partnership in Girls' Boarding and Day School. Vendor states that the School is the only one in the City taking Boarders. Established 47 years and conducted by vendor 34 years. Gross receipts for past year about £1,600. Number of Boarders 27, and 12 Day Boarders, 37 Day Pupils, and 8 Pupils for extra subjects. We believe our client is willing to arrange easy terms of partnership in the case of a suitable lady.—No. 7,170.

Warwickshire.—Girls' Boarding and Day School. Gross receipts for past year about £900. 8 Boarders paying about £45 to £54 per annum, 50 Day Pupils paying £3. 3s. to £5. 5s. per term. Goodwill by arrangement.—No. 7,171.

Norfolk.—Girls' Boarding and Day School. Gross receipts for 1920, £550. Number of Boarders 8, number of Day Pupils 40. Rent of house £40. Price for goodwill £200, or possibly one term's fees would be accepted. Furniture, including one piano, about £150.—No. 7,173.

Dorsetshire.—Boarding and Day School for Girls, with Preparatory and Kindergarten Departments. Gross receipts past year, £534. 6s. 2d. 3 Weekly Boarders paying 75 guineas per annum and 2 Day Boarders paying 36 guineas, also 18 Day Pupils paying 13 guineas a year. Music, drill, stationery are extras. The house is about five minutes from the sea and in the best residential part of the town. Price for goodwill £300. School furniture at valuation; household furniture £200.—No. 7,182.

Leicestershire.—Girls' Boarding and Day School, with Boys' Preparatory and Kindergarten. Established 80 years. Gross receipts £750. Number of Boarders 9, paying 11 to 16 guineas a term; number of Day Pupils 37, paying from 2 to 5 guineas a term, without extras. Corrugated-iron Schoolroom, lined wood and asbestos, 2 stoves, recently decorated and painted, size 60 ft. by 20, accommodating about 100 pupils; can be divided by wooden partitions into 3 rooms, each 20 ft. by 20 ft. Price for goodwill, schoolroom, school, and household furniture, £750 or £550 for goodwill and schoolroom. Furniture, &c., at valuation.

The vendor would be willing to accept £550 down.—No. 7,183.

BOYS' SCHOOLS.

Kent.—Successful School for Boys. Transfer or Partnership. Gross income about £1,800 a term. 70 Boarders, 16 Day Pupils. Large, well-lighted premises. Rent £80 only. Price £3,000 as a going concern. Half share can be had.—No. 8,049.

Kent (Seaside).—Dual Boarding and Day School. Established and conducted by vendor several years. Gross receipts about £2,500. Number of Boarders 38, paying about 45 guineas per annum, and 62 Day Pupils. Goodwill about £1,000, or by Capitation fee.—No. 8,053.

Essex.—Boys' Boarding and Day School. Established 100 years. Gross receipts £1,500. Net profits about £500. Number of Boarders 14, paying from £50 per annum to £112 per annum. The latter fees, we believe, are paid by foreign pupils. Number of Day Pupils 60, paying £3. 3s. per term. The vendor would be willing to accept one term's fees by way of goodwill, school furniture £25, and some household furniture £140.—No. 8,057.

Day and Boarding School.—Number of boys about 85. Gross receipts about £700. Price for goodwill, school furniture, and excellent stock of textbooks and stationery, £1,000. Special terms could be made as to payment.—No. 8,054.

A FEW OPINIONS OF THE PRESS

"A publication which must claim the serious attention of every student of educational progress."

—THE TIMES

"The best record of English Educational Thought and Practice."

—MONROE'S CYCLOPÆDIA OF EDUCATION

"The comprehensiveness of its survey of the educational field is well known. Moreover, it is written throughout by those who have an intimate acquaintance with the subjects of which they are treating."

—THE GUARDIAN

"Besides being a useful record of the educational events of the year, it forms a valuable miscellany of essays and general articles interesting to teachers."

—THE SCOTSMAN

"Continues to occupy the premier position. It has unrivalled facilities for learning what is being transacted behind the scenes, and its columns are open to every shade of opinion."

—THE OXFORD MAGAZINE

"The Journal of Education.' This has made its way to the top rank of educational journals. Nowhere can we find a more carefully recorded chronicle of events, better considered judgments on questions of the day, or more competent criticism of educational literature."

—THE SPECTATOR

"The first in this country to devote itself to the work of Education as a whole, without regard to any particular sect or society. It numbers among its contributors a more brilliant group of scholars, perhaps, than any similar periodical."

—THE PALL MALL GAZETTE

"A publication which has long since established itself as one of the most readable and useful journals for teachers."

—THE BIRMINGHAM DAILY POST

London: MR. WILLIAM RICE, 3 Ludgate Broadway, E.C. 4.

BLACKIE'S SELECT LIST OF BOOKS FOR THE STUDY OF THE FRENCH LANGUAGE.

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

SAYNÈTES.

Petites pièces pour la Lecture ou la Representation. Par EFFIE MAGEE, Edgbaston High School for Girls, Birmingham. 2s. 6d. net.

COURS DE FRANÇAIS, d'après les Textes.

By M. ANCEAU and E. MAGEE, Edgbaston High School for Girls, Birmingham. Cloth boards, 2s. 9d.

A SKELETON FRENCH GRAMMAR.

By Professor ATKINS, M.A., King's College, London. The "irreducible minimum" printed in red and black. 2s. 6d. With Exercises. 3s. Exercises only, 1s. 6d.

LE TEXTE EXPLIQUÉ.

Recueil de Morceaux Choisis des Auteurs Français, arrangés en Groupes Selon le Sujet Traité, avec Explications Détaillées Rédigées en Français. Cours Moyen. Selected and edited by E. J. A. GROVES. 2s. 6d. In Two Parts, 1s. 6d. each.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGEE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 3s.

LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By E. MAGEE. With sixteen full-page Coloured Pictures and many other Illustrations. 3s.

The most successful French Course of recent years.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By E. J. A. GROVES, Lic. ès L., Senior French Master, Bradford Grammar School. First Year, 3s. Second Year, 4s.

BLACKIE'S LONGER FRENCH TEXTS.

From modern French Literature. A series of continuous Readings from Modern French Authors. Printed in large type, with brief Notes, Questionnaire, Phrase-list, and Vocabulary. Each volume contains about sixty pages, and is furnished with a vocabulary and other teaching aids. The texts chosen are either complete short books or are skilfully abridged from longer works. 1s. each.

Over 60 celebrated French Authors are represented in this series, such as ABOUT, BOSSUET, DAUDET, MONTAIGNE, BALZAC, BOILEAU, DUMAS, RACINE, BÉRINGER, CORNEILLE, LA FONTAINE, VOLTAIRE, &c., &c., &c.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. 7d. each.

Characteristic selections from well known French writers, of sufficient length to be interesting in themselves, as well as representative, as far as possible, of the work of the several authors. Each book consists of from 40 to 64 pages, including a biographical and critical note, text, and explanatory notes. Certain volumes are issued with vocabulary, and a number are provided with questionnaire. Price, with a few exceptions, 7d. each; with Vocabulary, 9d. each.

Authors represented in this series: ABOUT, HUGO, MÉRIMÉE, DUMAS, FEVAL, DAUDET, SOUYESTRE, YERNE, &c., &c.

ÉPISODES MÉMORABLES DE L'HISTOIRE DE FRANCE.

Edited by LOUIS A. BARBÉ, B.A., Officier d'Académie. With Introduction and Vocabulary. 1s. each.

PRISE DE LA BASTILLE. From Michelet's *Histoire de France*.

LA ROUTE DE YARENNES. From Michelet's *Histoire de France*.

LES FRANÇAIS À LA 1^{ÈRE} CROISADE. From Michelet's *Histoire de France*.

LA SAINT-BARTHELEMY. From Henri Martin's *Histoire de France*.

DELIVRANCE D'ORLÉANS PAR JEANNE D'ARC. From M. de Barante's *Histoire des ducs de Bourgogne*.

DERNIERS JOURS DE MARIE-ANTOINETTE. From Alph. de Lamartine's *Histoire des Girondins*.

CHARLOTTE CORDAY, LA JUDITH DE LA RÉVOLUTION. From Alph. de Lamartine's *Histoire des Girondins*.

LE PRINCE CHARLES-ÉDOUARD EN ÉCOSSE. From Voltaire's *Précis du Siècle de Louis XV*.

HISTOIRE DE JEANNE D'ARC DEPUIS SA PRISE JUSQU'À SA MORT. From M. Guizot's *L'Histoire de France racontée à mes petits-enfants*.

BLACKIE'S FRENCH PLAIN TEXTS.

The texts in this series are issued without either Notes or Vocabulary to meet the views of those teachers who prefer to dispense with such aids, and also to allow of their being used for the various purposes for which nothing but a plain text is suitable. Brief Introductions are provided. 4d. each.

STAHL—LES AVENTURES DE TOM POUCE.

MICHELET—JEANNE D'ARC.

LA FONTAINE—SHORTER FABLES.

DAUDET—LA MULE DU PAPE, ETC.

GAUTIER—LE PAVILLON SUR L'EAU, ETC.

MÉRIMÉE—MATEO FALCONE, ETC.

DUMAS—JACOMO.

DAUDET—LA DERNIÈRE CLASSE, ETC.

DAUDET—LE PETIT CHOSE À PARIS.

DAUDET—LETTRES DE MON MOULIN.

BALZAC—UN ÉPISODE SOUS LA TERREUR.

BRUEYS AND PALAPRAT—L'AVOCAT PATELIN.

BLACKIE'S FRENCH PLAYS.

Carefully edited and presented in readable and serviceable form, these plays will be found admirably suited to the needs of the classroom. The series includes examples of all styles, from the classic tragedies of Racine to the sparkling comedies of Labiche. 1s. each.

AUGIER AND SANDEAU—LA PIERRE DE TOUCHE. H. W. PRESTON, M.A., Devon County Council Staff Instructor in Modern Languages. (With or without Vocabulary.)

AUGIER AND SANDEAU—LE GENDRE DE MONSIEUR POIRIER. H. W. PRESTON, M.A.

BEAUMARCHAIS—LE BARBIER DE SÉVILLE. W. G. HARTOG, B.A., University College, London.

BOUILLY—L'ABBÉ DE L'ÉPÉE. W. G. HARTOG, B.A.

BRUEYS AND PALAPRAT—LE GRONDEUR. MARGUERITE D. M. GOLDSCHILD, B.A.

DELAVIGNE—LOUIS XI. MARGUERITE D. M. GOLDSCHILD, B.A.

Inter Lilia. Latin Verses by A. B. RAMSAY, Lower Master of Eton College. School edition. Extra fcap. 8vo. 3s net

"Deserves a warm welcome for its intrinsic charm. It is not too high a compliment to say that Mr Ramsay is a scholar whose work reminds us of the phrase *curiosa felicitas*. . . . It differs *toto caelo* from the orthodox volume of 'versions'. . . . The teacher who buys it will find himself possessed of a most charming volume."—*Latin Teaching*

The Teaching of History. By E. L. HASLUCK, M.A., F.R.Hist.Soc. Crown 8vo. 8s net. Cambridge Handbooks for Teachers.

"A more sensible, practical book of counsel on the art and science of history teaching has not been published, and the book can be commended without reservation."—*The Schoolmaster*

"All who are engaged in teaching this subject will be grateful for the help given. . . . Mr Hasluck has done real service to the cause of education."—*Education*

Cambridge University Calendar for the Year 1920-21. Crown 8vo. 20s net

The Cambridge Bulletin. No. XXXVII, October, 1920, giving particulars of the recent and forthcoming publications of the University Press, will be sent post free on application

Practical Geometry. By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A. Crown 8vo. 5s net; or in 2 parts, 3s net each.

A book designed to take the average student through the course indicated by the age of 15. With this object, the usual formal methods of teaching Geometry have been abandoned whenever an informal method seemed educationally preferable. The exercises are largely of a practical character

Theoretical Geometry. By the same authors. Crown 8vo. 3s net

A sequel to *Practical Geometry* for those who continue their mathematical education beyond the age of 15 or 16. This is a succinct formal presentation of the propositions of the Cambridge schedule, designed to knit together the knowledge already acquired.

These two books are also issued bound together in one volume, price 7s net

Notes and Answers. 1s 6d net

Exercises from Elementary Algebra.

By the same authors. Complete with answers, 7s 6d net; without answers, 7s net. Volume I, with answers, 4s net; without, 3s 6d net. Volume II, with answers, 4s 6d net; without, 4s net

The exercises are identical with those in the first edition of *Elementary Algebra*, except that a few questions have been added to the existing sets of exercises, a few new sets have been added, and some new revision papers.

The Elements of Plane Geometry.

By C. DAVISON, Sc.D., formerly Mathematical Master at King Edward's High School, Birmingham. Crown 8vo. 10s net

Though a few of the proofs given in this textbook are new, the most important feature in which it differs from its predecessors is the provision of numerous sets of exercises. The plan of the book is shown by the following table of contents: Congruent Triangles, &c.; Parallel Straight Lines, &c.; Areas: The Circle: Angles in a Circle: Areas (cont.); Proportion and Areas: Miscellaneous Theorems; Problem Papers; Answers to Numerical Exercises.

Light. By S. E. BROWN, M.A., B.Sc., Head Master of Liverpool Collegiate School. Crown 8vo. 6s net

This new volume forms Section V of Part I of Mr Brown's *Experimental Science*. The books previously published may be obtained in the following forms:—Part I (Physics), 5s 6d net; Part II (Chemistry), 4s 6d net. The four sections of Part I are also published separately: I (Measurement), 2s 9d net; II (Hydrostatics), 2s 6d net; III (Mechanics), 2s 3d net; IV (Heat), 3s 6d net

"No higher praise can be given than to say that it maintains the high standard of its predecessors."—*The Scottish Educational Journal*

Elementary Dynamics. A Textbook for Engineers.

By J. W. LANDON, M.A. Crown 8vo. 10s 6d net

"This book is primarily written for engineering students, many of whom find considerable difficulty in grasping the fundamental principles on which the subject is based."

Physics. The Elements. By N. R. CAMPBELL, Sc.D., F.Inst.P. Large royal 8vo. 40s net

This book is an introductory volume to a treatise on physics which shall expound systematically the accepted doctrines of the science in such a way as to exhibit clearly the fundamental propositions on which they are based. It consists of two parts, one on the nature, meaning, and basis of scientific propositions, and one containing a careful examination of the process of measurement which characterises physics and distinguishes it from other sciences.

A Course of Modern Analysis. An Introduction to the General Theory of Infinite Processes and of Analytic Functions; with an account of the Principal Transcendental Functions. By E. T. WHITTAKER, D.Sc., F.R.S., and G. N. WATSON, Sc.D., F.R.S. Royal 8vo. Third edition, revised. 40s net

The Experimental Basis of Chemistry.

Suggestions for a series of Experiments illustrative of the Fundamental Principles of Chemistry. By IDA FREUND. Edited by A. HUTCHINSON, M.A., and M. BEATRICE THOMAS. Demy 8vo. With 71 diagrams. 30s net

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

PATON'S LIST of SCHOOLS and TUTORS

24th ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

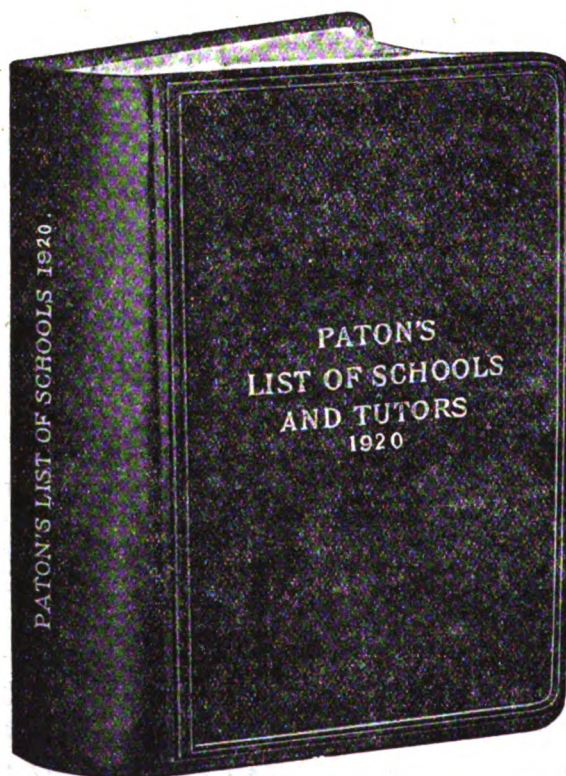

**EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.**

Dear Mr. Paton,

I shall be much obliged if you will insert my adv. again in your List of Schools. At any price it is cheap, for I know I get many more pupils than I can trace from your List. I know I have you to thank for the prosperity of my school.

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding-house."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term four pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

**Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.**

J. & J. PATON, Educational Agents,

143 CANNON STREET, LONDON, E.C. 4. Telephone: Central 5053.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence." *The Journal of Education.*

**This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.**

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness.

The following extracts are from a few such acknowledgments:—

"Two years ago you sent me a pupil named ———. Through her parents I have had **four** good pupils this year from four different places, and through two of these I have **five** more coming this term: that is, ten pupils from paying **one** commission."

"I am pleased to tell you our numbers are quite full for next term, but we expect to have several vacancies for September. Thank you for all you have done to bring this satisfactory state of affairs to pass."

"I should like you to know that these pupils that you have recommended to me seem to be satisfactory in every way, and that you have my sincere thanks for the help you have given."

"I am grateful to you for sending me inquiries so consistently, and I have found your Agency most helpful in securing boarders."

"I have now seven boys who have been introduced to me through you, and I take this opportunity of thanking you, and hope that you will be able to send me others in the near future."

"The child is a most satisfactory pupil, and I am very much obliged to you for the introduction."

"You will remember advising me to send my daughter to ——— School. I feel it would be ungrateful not to write and tell you how thankful I am I took your advice. She came home looking the picture of health, and is as happy as the day is long."

"Owing to your splendid efforts my boarding accommodation is taxed to its uttermost, and I must reluctantly ask you to stop sending me notices for the time being."

**If you have not yet made trial of our services, we shall be glad
to hear from you, with particulars of your School.**

REVIEWS AND MINOR NOTICES.

THE LARGER VIEW OF HISTORY.

- (1) *A History of Great Britain.* By J. MUNRO. Part III, *Kingdom and Empire, 1716 A.D. to 1919 A.D.* (Oliver & Boyd.) (2) *The British Commonwealth of Nations.* By H. D. HALL. (10s. 6d. net. Methuen.) (3) *A Short History of the British Commonwealth.* By Prof. R. MUIR. Vol. I, *The Islands and the First Empire* (to 1763). (17s. 6d. net. Philip.)

It is significant of the change in the outlook of historians that fewer histories of England are being written at the present time, and that in place of them studies are being attempted which place England in due relation, first, to Wales, Scotland, and Ireland; secondly, to the Overseas Dominion; and thirdly, to the world at large. The three volumes before us illustrate this tendency.

Mr. Munro (1) completes a "History of Great Britain" begun before the war, the present part carrying the story from the Septennial Act of 1716, which Mr. Munro considers to have marked the attainment of supremacy by the Whigs, to 1919, the significant event of which he thinks was the fall of the European autocracies. The central theme of the book is the co-ordinate development of democracy and empire. Its most valuable feature is the close relation which the writer's intimate knowledge of Scotland enables him to maintain between the parallel movements on the two sides of the Border.

Mr. Duncan Hall (2), an Australian, trained in the universities of Sydney and Oxford, has written much more than a history of the British Empire. It is true that he begins with a survey of the growth of the dominions, but this is merely preliminary. His purpose is to trace the development of national consciousness and independent life in the colonies, to examine the ties which continue to bind the daughter peoples to the mother-country, and to indicate the sort of union which alone he thinks possible for the future. Mr. Hall's book is important. It is well written, with a full knowledge of British history and Colonial opinion, and it forms a valuable contribution to the consideration of the urgent problem of the future relations of the constituent members of the British Empire to one another.

Prof. Ramsay Muir (3) has before him an end not dissimilar from that of Mr. Duncan Hall, but he goes back to remoter beginnings, he works on a larger scale, and he thinks more of explaining the past than of determining the future. The volume before us, the first of two, deals specifically with "The Islands and the First Empire," and it carries the combined story of united Britain and its expanding dominions down to the year 1763. It opens with a sketch of the making of the four nations—England, Wales, Scotland, and Ireland. It proceeds to treat of their conflicts during the later middle ages. Next it describes the beginning of the modern age and the course of geographical discovery which revealed the new world to the old. Then it goes on to trace the early efforts at overseas expansion, the growth of self-government, and the founding of the First British Empire. Prof. Muir is a facile and brilliant writer, with a marvellous gift for broad generalization, a sound and discriminating judgment, and a real enthusiasm for his subject. It is to be hoped that this masterly survey will find a place in every school and college library, and on the shelves of as many students as can afford to procure it.

CHRISTMAS AND OTHER BOOKS.

- (1) *British Fairy and Folk Tales.* Edited by W. J. GLOVER. (6s. Black.) (2) *Wonder Tales from Many Lands.* Written and Illustrated by K. PYLE. (6s. net. Harrap.) (3) *The King of Ireland's Son.* By P. COLUM. (7s. 6d. net. Harrap.) (4) *Forge of Foxenby.* By R. A. H. GOODYEAR. (5s. net. Blackie.) (5) *The School they Handed on.* By S. B. OWSLEY. (4s. 6d. net. S.P.C.K.) (6) *A Popular School-girl.* By A. BRAZIL. (6s. net. Blackie.) (7) *British and Colonial Postage Stamps.* By D. B. ARMSTRONG. (7s. 6d. net. Methuen.) (8) *School and Fireside Crafts.* By

A. MACBETH and M. SPENCE. (8s. Methuen.) (9) *Sermons by a Lay Head Master*. Preached at Gresham School, 1900-1918. By G. W. S. HOWSON. (6s. net. Longmans.)

In reviewing modern fairy tales, or the retelling of old favourites, the experienced reviewer finds himself faced with an extremely difficult task: for, whilst he can never get away from those impressions that made his own childhood radiant, that steeped him in an atmosphere of lovely legend and story, told with exquisite perfection, and the glamour of which still remains to haunt him, he does not wish to be unjust or hypercritical to modern endeavour. The late "Mark Rutherford" once said to the writer of these words: "The Rev. Dr. N — finds it 'curious' that women have not written any of the immortal fairy tales. If he went deeper he would see that they had woven them into the souls of their sons." We afterwards wrote down Mr. Hale White's words as nearly faithfully as possible, and the significance of them comes to us in a consideration of the batch of fairy tales written or retold or compiled by contemporary hands. For, one wonders, is it possible for the modern ever again to recreate or recapture that spirit of naiveness, of un-selfconsciousness, of faith in its wider sense, that pervade and permeate the older ones?

There is something conscious and laboured in the best of the modern books, and one begins to question whether the publishers would not do better to republish the classics—for we must not be unmindful of the exigencies of the publishing trade—in their own original versions, untouched and undesecrated by the improving hand of the adapter. Last month we sought in vain for several of Mrs. Ewing's stories; likewise for a handsome, finely illustrated version of "The King of the Golden River," and in neither case were successful. The same criticism applies to numbers of others of the immortal stories, which we find modern children neither possess nor, to their infinite loss, know.

"British Fairy and Folk Tales" (1), edited by Mr. W. J. Glover, is, on the whole, a good collection, and if it have the fault alluded to above—an example being, "Before him the rich landscape was warm with trees"—this is rather due to the "literary" needs of the hour than, we think, to anything consciously "precious" on the part of the compiler; and several of the Irish and Welsh stories will be acceptably new to English children. The coloured illustrations, by Mr. Charles Folkard, are very charming, but does not the modern child demand something a little less tame?

"Wonder Tales from Many Lands" (2), written and illustrated by Katharine Pyle, are prettily told, and furnished with the decorative detail so popular to-day (one wonders how far the child reader appreciates them), but she rarely succeeds in that most difficult of tasks—that of keeping the peculiar atmosphere that should characterize the national legend or story. In this respect we give Padraic Colum our warm congratulations. His volume, "The King of Ireland's Son" (3), with its enchanting tales of "Gilly of the Goatskin," "The Story of Morag," and others, are told with that simplicity, poetry, and, if one may say so, *air* of reality which is just right for fascinating a child, and his (and not less her) joy will be increased by the interesting illustrations of Mr. Willy Pogany, especially those characteristic of Irish thought and feeling, such as "She saw the corpse sitting up stiffly." The dialogue is at once admirably realistic and poetical, and in the process of Padraic Colum's telling we rejoice that the native humour—a quality sadly lacking in the modern fairy tale—is preserved in all its richness. The interchange of compliments between Flann and Mogue is delightful:

"Mogue," said Flann, "what are you doing in the Town of the Red Castle?"

"I'm here to sell a few things," said Mogue; "this little horse," said he, "and a few things I have in my pack."

"And where are your friends?" asked Flann.

"My band, do you mean?" said Mogue. "Sure, they all left me when you proved the better robber. What are you doing here?"

"The King of Ireland's Son" must have a place on the same shelf as the "Arabian Nights" and other of the child's immortals.

From fairy tales to school stories is a natural transition, and here again the track is somewhat well worn, and it is not easy to strike out anything new. We think, without being hypercritical, that there might be an undercurrent of something more idealistic in both the girls' and boys' stories without the interest of the story being in the least diminished. Nor need any timid writer, with the example of every great artist before him, trouble about the "art for art" absurdities of some of our would-be aesthetic critics. Early youth is the period for sowing the seed, and, without actually laying down moral principles in didactic fashion, many great truths may be conveyed. What nobler morality has ever been taught than that brought home by Scott in "The Talisman," in the sharing of the meal between Saladin and the Knight of the Leopard? And in which one of Scott's stories is not such high virtue taught in his own dramatic and picturesque fashion?

"Forge of Foxenby" (4) is not specially original, but perhaps for that very reason schoolboys, who are very conservative, will like it the better, and Mr. Goodyear has the proper number of football matches and fights and the rest of it in which the properly constituted schoolboy delights. It is well illustrated by M. R. Whitwell.

The girls are duly provided for by Miss Sibyl Owsley in her story "The School they Handed On" (5), and makes lively reading, but we could wish that the teacher had reproved the young lady, who states that she is a "rotter." And is it necessary there should be quite so close an imitation and admiration of boy nature in the matter of slang?

Miss Angela Brazil has a wide circle of readers, and no doubt her latest story, "A Popular Schoolgirl" (6), will meet with the usual favour, and increase her popularity.

Boys who collect stamps, and collectors generally, will be grateful to Mr. Douglas B. Armstrong for his excellently arranged "British and Colonial Postage Stamps" (7). In addition to the historical account, which others besides philatelists will find interesting, there are a bibliography and a chapter on Values.

Schools of Arts and Crafts especially, and students and teachers, will find "School and Fireside Crafts" (8), by Ann Macbeth and May Spence, both practically useful and most suggestive. On almost every page it has diagrams and illustrations elucidating and completing the instruction on simple pottery, basket-making, weaving, &c.

Old Boys of Gresham School, and many others, will be glad to see, under the title of "Sermons by a Lay Head Master" (9), the sermons preached at the school by the late head master, Mr. G. W. Howson. They are thoughtful and spiritual, and there is a fine and broad spirit of generosity in what is really a plea for internationalism in the chapter called "After the War." F. L.

SOME RECENT MUSICAL PUBLICATIONS.

- (1) *The Teaching of Music*. By R. T. WHITE. (4s. net. Constable.)
- (2) *Short History of Music*. By ETHEL HOME. (5s. Weekes.)
- (3) *Elementary Harmony*. In three books. By Dr. KITSON. (3s. 6d. net each. Clarendon Press.)
- (4) *The Child's Training in Rhythm*. By SYLVIA CURREY. (2s. net. J. Williams.)
- (5) *Time made Easy for Beginners*. By J. A. JOHNSTONE. (2s. net. J. Williams.)
- (6) *Rhythmic Games*. By CLARA BUTES. (Book I, Second Edition, 4s. 6d. net. Evans.)
- (7) *First and Second Chap-book of Rounds*. By ELEANOR FARJEON. Music by HARRY FARJEON. (1s. each. Dent.)

The problem of music teaching in class is one that has strong claims on the attention of educationists who admit music to their curriculum. The class teacher requires qualities of a different character from those usually possessed by the average music teacher. What those qualities are, and how the problem can be successfully approached, are admirably set forth in Dr. White's little handbook (1). This book is wholly concerned with the work of the class teacher, and the author, as the result of many years' experience in conducting such classes, has much practical advice to give. Reviewing first the whole problem of musical instruction in schools, he proceeds to outline a scheme for music in the Kindergarten, continuing through the lower and upper forms to the advanced class, where he would call in the assistance of a good gramophone or the player-piano to introduce the finest examples of vocal and instrumental music.

Miss Ethel Holmes's book (2) will make an equally strong appeal, not only to the music teacher, but to the music student at large. With its many anecdotes and stories, this history helps to bring one into direct touch with the personalities of the great masters, and so arouses a lively interest in their work.

We may well be grateful that the success of Dr. Kitson's "Evolution of Harmony" has induced him to cater for students in the elementary stage (3). Dr. Kitson considers the essentials for any profitable study are (a) ear-training, (b) constructive work, (c) constant use of the unessential, and there will not be found many to disagree with him.

Dealing with one aspect of musical education, and that the most important in the early years of tuition—the teaching of rhythm—we have two little books, (4) and (5), under consideration. Miss Currey presents her case in a manner that will appeal to the experienced teacher, while Mr. Johnstone, as the title implies, deals with the elementary facts of pulse and time.

With the triple purpose of meeting the requirements of physical development, affording opportunities of rhythmical training, and familiarizing children with the music of some of the great composers, Miss Clara Butes has issued a very useful book (6) of "Rhythmic Games." Brahms, Mendelssohn, Rossini, and Rubinstein are the composers drawn upon, and, in addition to full instructions as to steps and movements, an excellent series of photographs are helpful in showing the possibilities of various groupings.

Coming now to the vocal section, we notice Miss Farjeon's volume (7). The employment of square notes instead of round, and the numerous illustrations after the manner of the old woodcuts, give a singularly attractive appearance to these little books, while the rounds themselves, both words and music, have a pleasant flavour of old time.

The excellent series of Singing Class Music, edited for Mr. Edward Arnold by Thomas F. Dunhill, and the publications of the Yearbook Press, are all of such a high standard that it makes the task of selection difficult. Where all are good—and there is nothing in either catalogue unworthy—we have space only to mention a few. In the Unison Songs of Mr. Edward Arnold's series we have a sprightly setting by Dr. Brewer of Charles Kingsley's words, "Sing Heigh-Ho." "If I were a Sunbeam" and "Early Spring," by W. G. Alcock, are full of variety and charm.

George Dyson contributes two new settings of well known words, "When Icicles hang by the Wall" and "A Wet Sheet and a Flowing Sea," and the editor (Mr. Thomas Dunhill) has a delightfully fresh setting of "It was a Lover and his Lass" and the effective, if rather more difficult, "A Night-Welcome." In the two-part songs, mention must be made first of "The Bells of Shandon," by E. T. Sweeting, with bell-like accompaniment, and "Orpheus with his Lute," set as a Canon at the Fifth, by Charles Wood. Dr. Wood, who is prolific in this type of composition, contributes also a setting of some seventeenth century words by Thomas Nabbes, entitled "The Milkmaid." The greater possibilities of the three-part song are happily exploited in no less than three new numbers from the pen of Edgar L. Bainton, "The Sea," "O where do Fairies hide their Heads?" "The Gold of the King's Highway," and last, but not least, "The Starlings" and "Lilies," by Charles Wood, who has four two-part songs to his credit with the Yearbook Press, the first three, "Together," "No Surrender," and "Courage," to be sung without accompaniment—indeed none is provided—but the composer has added the third stave for those who prefer to give some slight support to the voices.

Brief mention only can now be made of some of the many new instrumental compositions. Messrs. J. Williams & Co. have added to their "Berners Edition" two interesting volumes of "Old English Masters." Book 2 of "Spare Moments," by York Bowen, now appears in the same edition, these of course for piano-forte. The same publishers issue a number of new works for children, by well known composers—such as Swinstead, "Six Pieces for Children" (2s. 6d. net); Colin Taylor, "Marionettes" and "Waltz in G" (1s. 6d. and 2s.); Martin Shaw, "Brer Rabbit" (2s. 6d. net); and Arthur Somervell's two books of "Holiday Pictures" (2s. 6d. each).

CLASSICS.

A Critical History of Greek Philosophy. By W. T. STACE.
(7s. 6d. net. Macmillan.)

Although intended for the general reader rather than for the classical student, this book is a thoroughly scholarly piece of work which we highly recommend. It traces the gradual development of philosophic truth from the earliest speculations of the Ionians through the three great masters, Socrates, Plato, and Aristotle, right down to the transition to Neo-Platonism. Mr. Stace rightly calls it a *critical* history, because he is not content merely to record, but examines and interprets the different doctrines of successive philosophers in the light both of their own day and of their historical antecedents. We cannot in the short space at our command do justice to the book, but the calibre of Mr. Stace's mind may fairly be judged from an illuminating remark such as that on page 12: "It is often said that philosophy is a very difficult and abstruse subject. Its difficulty lies almost wholly in the struggle to think non-sensuously." In treating of the Pre-Socratics, he is especially happy in his interpretation of Pythagoreanism, and when he comes to Plato he goes deeply into his subject, indulging, for example, in a careful examination of the "Theaetetus" for Plato's doctrine of knowledge; and yet the book is very readable, because he has succeeded in bringing the personality of the different philosophers vividly before us. This is particularly true of Socrates, whom he makes live by means of graphic quotations from Plato's dialogues. But it is not wise to say that "Whenever we find myths in Plato's dialogues, we may suspect that we have arrived at one of the weak points of the system" (page 171).

The Agamemnon of Aeschylus. Translated into English Rhyming Verse, with Explanatory Notes, by Prof. G. MURRAY.
(2s. net. Allen & Unwin.)

There is no need to recommend this translation to those who are familiar with Prof. Murray's verse renderings of Euripides. There will always be two opinions about the use of rhymed couplets in

which to turn iambics, but there can be no gainsaying the fact that Prof. Murray has done the English reader an inestimable boon in giving him so much of the spirit of the ancient tragedians. Of the present translation, it is enough to say—and it is high praise—that it represents Aeschylus as successfully as the author's previous work represented Euripides, and perhaps no other English scholar could have conveyed so much of the peculiar sublimity of a play which is itself unique in the history of Greek tragedy. As Prof. Murray himself says: "The language of Aeschylus is an extraordinary thing, the syntax stiff and simple, the vocabulary obscure, unexpected, and steeped in splendour. Its peculiarities cannot be disregarded, or the translation will be false in character. Yet not Milton himself could produce in English the same great music . . ." (page 7). Whatever scholars may think of the achievement, they will recognize that it is the effort of one who has appreciated the immensity of his task. There is a short preface containing an appreciation of the play, in the course of which Prof. Murray throws rather a new light upon the character of Clytemnestra.

The Silver Age of Latin Literature from Tiberius to Trajan.

By Prof. W. C. SUMMERS. (10s. 6d. net. Methuen.)

We have no hesitation in saying that this book will take its place as the standard work on the subject. It gives a detailed account of the extant works of all the Silver Age writers—even dealing with scientific and technical prose—and all that can be gleaned from other sources about those whose writings are lost. Prof. Summers is a discerning critic. For example, he says of Statius and Silius Italicus: "They may offer lip service to Virgil, these poets, but they sacrifice at the altars of Ovid" (page 29). Of Seneca, the tragedian: "As literature, the plays are contemptible, substituting for action and emotion declamation and hysteria" (page 58). And of Martial's epigrams: "Many a type, indeed, and many a trait that we might else have been tempted to think peculiarly modern have they handed down to us" (page 104). Similar illuminating criticisms abound throughout the book, and Prof. Summers is to be congratulated upon the remarkable width and sanity of his judgment. But does he not show a lack of appreciation of the humour of Juvenal when he supports the contention that he (Juvenal) "has not much more sense of humour than Persius" (page 82) by quoting the famous anticlimax of "Troica non scripsit," by which the satirist condones the matricide of Orestes as contrasted with that of Nero? Though a scholarly, rather than a popular, work, it is written in an interesting and fascinating manner, which is a pleasant relief to the usual "dry-as-dust" manual. A special feature is the tracing of the influence of the different authors upon both medieval and modern writers.

"Virgilian Studies."—*The Growth of the Aeneid.*

By M. M. CRUMP. (6s. net. Blackwell.)

This study in the stages of composition of the Aeneid, though, as Miss Crump herself admits, largely conjectural, is well thought out and supported by much internal and external evidence. Lovers of Virgil will not necessarily find it a fascinating book, but that is the fault of the subject rather than of Miss Crump. On the whole, it is rather jejune, but the treatment of the more strictly literary points is distinctly good, as, for example, the contention that the incomplete lines were not intentional, and that the later books, though of a lower poetic level, show a great advance in technical construction. Book III is taken to be the first to be written, and three stages of composition for the whole poem are distinguished.

EDUCATION.

The Life of Ronald Poulton. By his Father, E. B. POULTON.
(16s. net. Sidgwick & Jackson.)

Aristotle's conception of the relation of life to soul is perfectly illustrated in the physical and mental development of Ronald Poulton, one of the glorious band of heroes who gave their lives to the nation during the late war. We have in this living and loving document by Prof. Poulton a record of the growth of his son into physical manhood and a unique position in the Rugby football world; and we trace in addition the continuation of the process by which "Ronnie's" soul developed in intelligence and character. In International football Poulton stood for all that is best in British sport, and, by exercising intelligence and character on the practical problems of thought and life in many directions, he created impressions which will long be cherished with affection by all who knew him. How we regard life, and what we get out of it, depend upon ourselves; and Poulton's nature was too noble to get anything but the best. After what has been said about school life by some writers in recent years, it is refreshing to read of Poulton's years at the Oxford Preparatory School and at Rugby. Instead of a muddy stream, we have a sparkling river ever bearing the ships of boyhood and youth into new regions of happy and healthy activity. From Rugby Poulton

went to Balliol with an Exhibition in Natural Science, and while at Oxford he took an active interest in boys' clubs, as well as being a leader in university sports and a colour-sergeant in the O.T.C. After leaving the University he entered Huntley & Palmer's factory at Reading at the suggestion of his uncle, the Right Hon. G. W. Palmer, upon whose death in 1914 he became heir to a large fortune. He was killed while in charge of a working party near Ploegsteert on the night of May 4-5, 1915. So passed into silence one who strove ever towards the highest, yet the beacon-light of his life remains with us, and we are grateful to his father for making it manifest as a guide to clear courses in troublous seas.

The Education Department and After. By Sir G. W. KEKEWICH, K.C.B. (21s. net. Constable.)

To anyone who, having passed middle life, has been in fairly close touch with the working of our educational system during the past thirty years, we can confidently promise that Sir G. Kekewich's book will, at any rate, provide lively reading. The glimpses he gives into the officialdom of former days, with its love of what George Eliot somewhere calls "dear old tumbledown inefficiency," his warnings that the Augean stables of civil administration still need vigorous cleansing, and his caustic criticism of some of his official contemporaries (notably the "lethargic" Duke of Devonshire and the "mischievous" Sir John Gorst) are all vastly entertaining, though they provoke melancholy reflections on "what might have been" if power had been in the hands of the right people. As for Sir George himself, it is easy to describe him as a man with a grievance. It is easy also to say that anyhow the time was ripe for reform, and that a man of his temperament inevitably took what, after all, was the line of least resistance by coming to terms with the teachers. But facts are facts, and the facts are that during Sir George's tenure of high office the old vicious system of payment by mechanical results was gradually abolished, the old uniformly prescribed curriculum was swept away, the stupid classification of children by age was ended, some inspectors were appointed who were not ignorant of their job, difficulties between the Department and the teachers were made matters of free discussion, and last, but not least, the valuable office of special inquiries was established. Sir George's occasionally cynical reflections are apt to raise a doubt in one's mind as to whether the happiness and welfare of the children was an important by-product of his activities rather than their inspiring purpose. Still, he may safely invite his critics—and, we fear we must say, his enemies—to point to any period in which finer work was *actually accomplished* for the education of the country than the period of ten years that followed his appointment as secretary.

Needlecraft for Older Girls. By M. SWANSON. (7s. 6d. Longmans.)

Following on her "Educational Needlecraft" and her "Needlecraft in the School" the present book is Miss Swanson's contribution to continuation and other schools for adolescents. It is marked by all the admirable qualities of its predecessors, and has the merit of again striking out an entirely new and unexpected line of work. All the ordinary demands of needlework and ornament are attended to, but in addition there is a complete section on the doll and its attendant needlework. Francis Thompson tells us that first came man, then woman, then the child, and finally the doll, "and the crown of these is the doll." Few people understand just what this means, but Miss Swanson appears to have no doubt about it, and proceeds to make the inevitable application. She finds that adolescents respond easily and warmly to all that the doll suggests, and as one reads her pages one begins to see in a dim sort of way that there is more in all this than appears on the surface. The book has a very direct bearing upon the life impulses of the growing girls, and in Section IV there is worked out a curious connexion between needlework and that life urge that it is getting fashionable to call *hormé*. The book appears to be symbolical throughout, but in spite of the incipient mysticism Miss Swanson keeps well within range of practical possibilities. She is familiar with school conditions and school materials, and recommends nothing which she has not herself tested. The work is copiously illustrated, both in black and white and in colours, by Miss Margaret Pilkington, whose work deserves high praise. The book can be strongly recommended to teachers seeking practical guidance accompanied by uplifting stimulus.

Cambridge Essays on Adult Education. Edited by R. ST. J. PARRY. (12s. 6d. net. Cambridge University Press.)

This handsome volume, which matches the "Cambridge Essays on Education" in its general get-up, is meant to bring before the public some of the principal subjects dealt with in the Report of the Committee on Adult Education, and it is on that account most appropriately dedicated to the Master of Balliol. The editor's introduction is followed by Dr. Cranage's chapter on the purpose and meaning of adult education. Then comes an historical survey by

Mr. A. E. Dobbs, whose recent work on "Education and Social Movements" has attracted much attention. Mr. Mansbridge writes with his accustomed clarity and force on organization, and the Rev. J. H. B. Masterman on democracy and adult education. The relation of the adult education movement to organized labour is dealt with by Mr. A. Greenwood, and its relation to the needs of women by Mrs. Huws Davies. Miss A. Thompson contributes a chapter on university extension, and Mr. W. G. Constable on the tutorial class. Last, but by no means least, a most interesting record of a student's experience is given by Mr. A. Cobham. The whole book is timely and suggestive, and will, we hope, be read by many who do not like blue books, or who like to be put at the right point of view before venturing upon the exhaustive official report.

School Camps: their Value and Organisation. By R. G. HEWITT and L. ELLIS. (3s. 6d. net. Clarendon Press.)

This is a thoroughly practical guide to the aims and organization of school camps, and will be found useful wherever efforts are being made to carry into effect the provisions of Section 17 of the Education Act, 1918. The formation and equipment of a camp, the preparation of food, the daily routine, and a number of necessary details, are treated in a series of brief, businesslike chapters. The last chapter (unfortunately entitled "Camps for Special Schools") indicates the few variations desirable for schools of different types, and an appendix summarizes for reference what is mentioned in the text.

Five Years Old or Thereabouts. By M. DRUMMOND. (5s. net. E. Arnold.)

The writer of this book is already known as one of the translators of Mosso's work on Fatigue, and as the author of "The Dawn of Mind." The present work may be regarded as a sequel to "The Dawn of Mind," setting forth some of the results which the writer has obtained during the last three years. Her manifestly keen delight in little children is united with a thorough grasp of the scientific side of the problem of training them. Some readers will think that she accepts Dr. Montessori's views rather uncritically, but there is no doubt that these chapters will provide the right kind of stimulus for teachers and mothers who recognize that the maternal instinct by itself is not enough.

The Control of Parenthood. Edited by Dr. J. MARCHANT. (7s. 6d. net. Putnam.)

The subject of this book is as important as it is delicate, the root of the whole matter being that the sexual instinct is far stronger than is necessary for the perpetuation of the species. We are, as the Bishop of Birmingham observes in his foreword, living in days when all are confessing the responsibilities of parenthood, but we find it difficult to know our duty because of the apparent conflict between what is true biologically and economically and what appeals to us from the religious and moral point of view. All sides are here put by experts: the biological, by Prof. J. Arthur Thomson and Prof. L. Hill; the economic, by Mr. Harold Cox and Dean Inge; the social and religious, by Dr. Mary Scharlieb, Dr. F. B. Meyer, and Dr. A. E. Garvie; and the imperial and racial, by Sir Rider Haggard and Dr. Marie Stopes. That such a subject should be presented in popular form is a sign of the times, and we have no doubt as to the utility of the book.

(1) *A First Book of School Celebrations.* (2) *A Second Book of School Celebrations.* By Dr. F. H. HAYWARD. (5s. net each. King.)

There is at least one important claim that can safely be made for Dr. Hayward: as an educational thinker, he lives persistently on the breezy heights. People in the plains below may discuss salaries, administrative details, scholarships, examinations, and "mental tests" of mere intellectual alertness. Often in so doing they fail to see the wood for the trees; they miss the big question what sort of *men* our machinery tends to turn out; they lose sight of those ultimate ends which have ever been the prime concern of the great leaders in education. Not so, at any rate, Dr. Hayward. Whether his "Spiritual Foundations of Reconstruction," which we noticed last year, has attracted much general attention we do not know; if not, he may take comfort in the thought that it stands high in the estimation of many eminent persons, and that time is probably, therefore, on his side. These two books of "School Celebrations" are a sequel to the earlier volume, and furnish a number of concrete illustrations of its main positions. The underlying idea is that there should be a system of school celebrations, based on the existent celebrations of the Empire, of Shakespeare and of St. David, but greatly extending the ritual and liturgical principle involved. The two volumes before us include proposed celebrations of Chaucer and Spenser, of Alfred the Great and Sir Philip Sidney, of Democracy and the League of Nations, of eugenics and temperance, of Turner and Watts, and, more generally, of the artist, the martyr, and the musician. But Dr. Hayward is nothing if not bold, and so he introduces, by way

of further illustration, celebrations of such controversial themes as Poland and Ireland. Few teachers would use these examples in all their elaborateness, or would straightway make such extensive use of the celebrational idea as Dr. Hayward desiderates. But we hope that many will make, at any rate, simple and occasional experiments, with a view to testing its value in practice.

FRENCH.

Cassell's French-English English-French Dictionary. Edited by Dr. E. A. BAKER. (7s. 6d. net. Cassell.)

In the introduction to their "Manual of French Composition," Messrs. Ritchie and Moore write:—"There is no really adequate English-French Dictionary." And we have some doubts as to whether this refutation of a well known work will fill the vacancy. In pre-war days the old edition in spite of its faults was the most popular book of its kind, and we have no doubt that the present edition will follow in its footsteps when the price of paper allows it to be sold cheaper. One great improvement is the showing of pronunciation according to the alphabet of the International Phonetic Association; another is the grouping together of subsidiary words under main words, so as to save space. With a slightly wider page there is probably more matter in this volume of a thousand pages than in the old one of two hundred more.

But the first criticism we feel bound to make is that the languages are so unevenly divided; the French-English part has 582 pages, but the English-French only 438. Although the pages of the latter seem fuller, yet there must be many more French words included than English. But surely an English student always finds more difficulty in translating from English into French, and hence the proportion of English words should be greater, especially as it is the fuller language. Although the editor has included several war words, we fail to note *embusqué, marmite, bidoche, or pinard*; "mine-sweeper" and "layer," or "duck-board." Another desirable addition would have been a selection of abbreviations (e.g., "C. G. T.") of which French newspapers are so full. The editor prides himself justly on the number of idioms and phrases he has included; he might add *aussitôt pris, aussitôt pendu*, and Boileau's *ce ne sont que festons, ce ne sont qu'astragales*. His translation of *au petit bonheur* would hardly fit *c'est écrit au petit bonheur* or *vous répondez au petit bonheur*. Again, he claims to have got rid of a large quantity of "dictionary words" or words that are found nowhere else, but he translates *côpe* by "esculent boletus," the addition of "kind of mushroom" would help the unscientific reader. Several adjectives of towns and provinces are included, but not *malouin, herrichon, or arrageois*. Of actual errors few can be discovered after a casual inspection; but *avoir le cafard* is more "to have the hump" than "to be funky"; *demandeur la carte* is not "to ask for the bill," but for the "bill of fare"; *petit bourgeois* is rather "lower middle class"; "sweets" as part of a meal cannot be translated *sucreries*; and *purée de pommes de terre* should be "mashed potatoes," as it is translated in the English part. "Melted butter," "key industries," *caviardage, sous-produits, curetage*, "Silver streak" (for the English Channel) are words that we fail to find and for which we would willingly exchange many words like *quadricapsulaire*. But the charm of dictionary-making is that it has no end; so Dr. Baker has many a happy hour before him.

GEOGRAPHY.

"The Blue Guides."—*Belgium and the Western Front: British and American.* Edited by F. MUIRHEAD. (15s. net. Macmillan.)

Like the volumes already published in the series, this guide contains a wealth of information needed by travellers and tourists. The detailed information is, however, so well arranged that the ordinary reader will experience no difficulty in finding what he wants without delay. The special feature of this guide is the great attention paid to the Western Front of the British and American lines. In the introduction Major-General Sir Frederick Maurice writes an excellent account of the British campaigns in the West. Throughout the guide notes are given on the military operations which took place near the towns along the battle fronts. To those visiting the battlefields and the cities of Belgium this guide will be indispensable. Sketch maps of the important battles and plans of thirty towns add to the attractiveness and value of the book.

Geography by Discovery. By J. JONES. Teachers' Edition. (3s. 6d. net. Sidgwick.)

It is stated "that the principal object of this volume is to place in the hands of pupils some original sources of world geography, and thereby to interest, to instruct, and to train." With this purpose in view, the author has chosen about twelve well known travellers and explorers, such as Marco Polo, Columbus, Magellan, Cartier, and others; in the case of each he first gives a short bio-

graphical sketch of the explorer, and then quotes extracts from his writings. The extracts have been carefully selected, and they give a personal touch to the narrative. In the hands of a skilful teacher this method has many advantages, but its scope is somewhat restricted, owing to the limited time available in the ordinary geography lesson.

Open-air Geography and Topographical Modelling. By J. W. T. VINALL and G. L. SNAITH. (5s. net. Blackie.)

In Part I the subjects dealt with are common to all books of this type—viz., map making by means of the theodolite, plane table, clinometer, and prismatic compass; Ordnance maps and the symbols used on them. The most striking features of the book are contained in Parts II and III, the diagrams and illustrations of which are excellent. In Part II panorama sketching is described, and Part III shows how the plan and elevation can be combined to produce the required model. The section on the evolution of the trench is particularly well done. Teachers who have the time and opportunity for outdoor work should certainly see this book; they will be able to get from it many useful hints and much valuable help.

"Cambridge Geographical Readers."—V: *The British Empire.* (4s. 6d. Cambridge University Press.)

Most of the chapters in this book are geographical, and they contain interesting descriptions of the physical features, climate, and productions of the various parts of the British Empire. The lessons also include historical accounts of British rule in India, the story of South Africa, and the Empire's share in the Great War. With regard to imported wheat, the statements made in Chapter I should be revised, and other sources of supply should be given.

"Bell's Geographical Series."—*The Groundwork of Modern Geography.* By Dr. A. WILMORE. (6s. net.)

Now that geography is being studied in a scientific way in many schools, books written by experienced teachers who possess sound knowledge of the subject are to be welcomed. The volume under review belongs to this type of book, and it can, therefore, be recommended. Although the sub-title states that it is an introduction to the science of geography, the book is essentially suitable for senior classes and for pupils taking an advanced course in geography. The writer assumes that the reader has an elementary knowledge of geology, and he devotes the first half of the book to a study of the principles of structural geography. The chapters on land forms, plains, valleys, lakes and coast lines are excellent, although the diction is occasionally difficult. The second part deals (a) with the various types of climate, (b) with biological geography. Under the latter heading are several useful chapters on plant geography and the distribution of animals. The text is illustrated with many well drawn diagrams and with beautiful full-page photographs.

An Advanced Practical Physical Geography for Public and Secondary Schools. By Capt. F. MORROW and E. LAMBERT. (7s. 6d. net. Meiklejohn.)

This book provides an advanced course of study in physical geography under the headings Atmosphere, Hydrosphere, Lithosphere, Maps, and Map-reading. In all sections of the book detailed descriptions are given, and in many of them the authors have successfully shown the relation that exists between man and the chief phenomena of Nature. Practical work is supplied by numerous questions at the end of each chapter. A large number of figures appear in the text, some of which resemble rough black-board diagrams. In another edition, the diagram showing a section of the Weald (page 331) should be corrected, and the unscientific terms "muggy" weather and "back half" of a cyclone (page 164) should be omitted.

"The Oxford Geographies."—*The Elementary Geography.* Vol. VIII: *Britain Overseas.* By E. K. HOWARTH. Edited by O. J. R. HOWARTH. (3s. net. Clarendon Press.)

For junior classes this book provides a satisfactory course of lessons on the British Dominions beyond the seas. The text is clearly printed, the chapters are divided into suitable paragraphs, and there are some good illustrations.

"Reason Why Geography."—*The Empire Beyond the Seas.*

By T. W. F. PARKINSON. (3s. Collins.)

For junior classes in secondary schools this book can be thoroughly recommended. The British Empire is described in fifty short lessons, in which the essential features are dealt with in an effective way. The text is clearly printed, and there are some excellent pictures and maps.

Compassing the Vast Globe. Vol. II: *The Common World of Common Folk.* By E. G. R. TAYLOR. (2s. 3d. net. Constable.)

The writer of this book tells a tale in a skilful way. The chapters on an Old-fashioned English Village, In the Land of the

Blacks, the Wealth of the Seas, and others are particularly suitable for young children. It is doubtful whether the maps (Figs. 1 and 10) will be of much value to little people.

HISTORY.

A History of Everyday Things in England, 1066-1799. By M. and C. H. B. QUENNEL. (16s. 6d. net. Batsford.)

This charming and remarkable work, which originally appeared in two parts—the one medieval, the other modern—has now been published in a single attractive volume. It is a model of artistic production, with excellent paper, numerous beautiful illustrations, and stout yet craftmanly cover. When one takes into account the present excessive cost of printing, and the difficulty of obtaining either sound material or good work at any price, the book can only be regarded as a marvel of cheapness and high quality. It is the task of Mr. and Mrs. Quennell—the one an architect and artist, the other an historian and critic—to take one by one the seven centuries with which they deal, and to describe, with the aid of plans and drawings, the costumes of the period, the ships, the dwellings of the people, the furniture, the food, the sports, the modes of ornament, and so on. They have gathered, with great skill and from multitudinous sources, masses of information of the highest interest and value to all students of social life. In particular, Mr. Quennell's practical acquaintance with building has enabled him to throw new light on the problems faced and solved by early architects. We can hardly imagine a book which would form a more welcome Christmas gift to any who are interested in either history or humanity.

A Dictionary of Napoleon and his Times. By H. N. B. RICHARDSON. (30s. net. Cassell.)

This crown octavo volume of nearly five hundred pages is a work of reference of absorbing interest. Napoleon is the great outstanding figure of modern history, and the influence of his titanic will still powerfully moulds the destinies of mankind. The cult of Napoleon has had its countless devotees in France from the days of M. Thiers to our own. Even in England it has secured disciples, mainly (curious to relate) among Radical politicians like Sir Walter Runciman and Mr. Oscar Browning. The Napoleonic literature is vast; one bibliographer estimates it at 40,000 volumes. It is full of doubtful and controversial matter. To systematize our knowledge concerning the Napoleonic era, to harmonize conflicting evidence, to condense the essence of the matter into manageable space, to arrange it in alphabetical order for ready reference—this must have been a gigantic task. But this is the task which Mr. Richardson has accomplished, and has accomplished extraordinarily well. He has given us biographies, models of compression, of all the leading persons connected with Napoleon; accounts of all his campaigns and battles, accompanied by plans; estimates of all the leading authorities from which our information about Napoleon is derived. A chronological table and a select classified bibliography complete a work of reference indispensable to all students of the Revolutionary and Napoleonic era.

British History Chronologically Arranged. 55 B.C. to 1919. By A. HASSALL. (20s. net. Macmillan.)

This chronology of British history is framed on the same model as the well known chronology of European history which Mr. Hassall published twenty-three years ago. That is to say, it consists of parallel tables giving dated lists of important events which occurred in the countries selected for treatment. Mr. Hassall's earlier work very materially assisted the study of Continental history, which was, at the close of the nineteenth century, slowly making its way into schools and colleges. The present work will perform a similar useful service in respect of British history, the study of which is still in its infancy. British history is more than English history supplemented by occasional allusions to the histories of Wales, Scotland, and Ireland. It implies the treatment of the four strains in co-ordinated equality. These parallel tables—which also mention leading events in European history—will powerfully aid this desirable development of historical teaching in these islands.

Europe and the Faith. By HILAIRE BELLOC. (17s. 6d. net. Constable.)

This is a work of theology rather than history. Its affinities are with the survey of the world, "Contra Paganos," which Orosius wrote in the fifth century of the Christian era. Mr. Belloc, indeed, makes vaster claims even than Orosius, for he contends that none but a Catholic can comprehend European history at all. "The Church is Europe, and Europe is the Church," is his constantly iterated and reiterated theme. It is a generalization that does not bear critical examination, and the thesis which Mr. Belloc builds up on it is a mere house of cards. Nothing that Mr. Belloc writes is wholly uninteresting, for he has a genius for large views. He perceives and portrays the greatness and grandeur of the Roman

Empire, and thus provides an antidote to the extreme under-valuation of that polity which marks Mr. Wells's treatment of it in his "Outline of History." Mr. Belloc also sees the value of the contributions which the Middle Ages made to modern civilization, but he is blind to the defects of the period. When he comes to deal with the Reformation, his religious zeal deprives his historical sketch of all value. He deplores the anarchy of modern times, and sees in the return of Europe to the Faith the only hope of mankind.

Life in Ancient Britain. By N. AULT. (5s. Longmans.)

This competent handbook presents a survey of the social and economic development of England from the earliest times to the Roman Conquest. It summarizes archaeological and other evidence, hitherto scattered in monographs and in the reports of learned societies. The materials dealt with fall under the four main headings—Palæolithic, Neolithic, Bronze, and Iron. The general impression conveyed is one of steady and uninterrupted progress, both economic and social. There are fifty illustrations, all drawn from authentic prehistoric sources, twenty of which are here produced for the first time. Mr. Ault's little book is an able and careful piece of work, valuable to the teacher of history and interesting to the general reader.

"The Story of the English Towns."—(1) *Nottingham.* By E. L. GUILFORD. (2) *Birmingham.* By J. H. B. MASTERMAN. (4s. net each. S.P.C.K.)

These volumes are additions to the interesting series of municipal histories which the S.P.C.K. is issuing. The two towns here treated belong to the same region of England. The similarity of their names indicates that they had a common origin in the Anglo-Saxon period. But they had a very different subsequent history, and the contrast between the two is most instructive. Birmingham remained a village with manorial organization until the industrial revolution of modern times. Nottingham, on the other hand, became a borough and shire fortress during the period of the Danish invasions; it was a prominent member of the urban confederacy of the Danelaw; it rose to even greater eminence as a county town under Norman and Angevin kings; it played an important part in politics and civil war. These brief but admirable sketches of the two towns can be cordially commended to students of local history.

MATHEMATICS.

A History of the Conceptions of Limits and Fluxions in Great Britain from Newton to Woodhouse. By Prof. F. CAJORI. (8s. 6d. net. Open Court Co.)

Raking over the ashes of dead controversies is proverbially a profitless task, but, although this history is largely a record of controversy and agreement has been reached on the matters which were debated for so many years and at times with considerable heat, Prof. Cajori's monograph is by no means labour lost. It is well that we should have recalled to us the slow and painful steps by which human thought progresses. The object of the book is to set forth the stages through which British mathematicians, from the time of Newton to the beginning of the nineteenth century, passed in their endeavours to establish on a firm logical basis the differential and integral calculus. Prof. Cajori allows the various writers to speak as far as possible for themselves, the more important relevant passages in their works being quoted verbatim. The final chapter is a judicial review of the merits and defects of the eighteenth century British fluxional conception. The Newton-Leibniz controversy, although glanced at, falls outside the scope of the work. In every respect this is a valuable and well executed contribution to the history of exact thought.

"The New Teaching Series."—*Mathematics of Business and Commerce.* By O. H. COCKS and E. P. GLOVER. (4s. 6d. net. Hodder & Stoughton.)

A useful book for continuation schools. The earlier chapters contain a revision of the fundamental arithmetical processes, including contracted methods, while, towards the end, algebraic symbolism is introduced and used in connexion with the evaluation of mensuration formulae. The theory of logarithms and their employment in the calculation of interest is also explained. The chapters on the principal operations of business scarcely go beyond what is to be found in any ordinary arithmetic.

A Primer of Trigonometry for Engineers. By W. G. DUNKLEY. (5s. net. Pitman.)

A small, compact introduction to trigonometry from the engineer's point of view. The right-angled triangle is first discussed, and the use of the trigonometrical ratios in engineering is illustrated by thirty-two fully worked out problems. The solution of triangles is considered in the three concluding chapters. Tables of logarithms, radians, and of natural and logarithmic trigonometric functions make the book self-contained.

GLASGOW AND BOMBAY.

SCHOOL BOOK SUPPLY.

AN ANNOUNCEMENT.

W. & G. FOYLE, Ltd., have recently opened a Special Department for the Supply of New Books to Schools, Colleges, and Convents. They can offer the most favourable terms. Further, they are in a position to offer certain other advantages unobtainable elsewhere.

Principals, Secretaries, and others would therefore be well advised to communicate with W. & G. Foyle, Ltd., before placing their Book Orders.

The New Department is already proving of decided service in the World of Education. "I will take this opportunity of thanking you for your prompt attention and all the trouble you have taken" is a typical remark from the many letters of thanks received recently.

The Household Income: Simple Economics for Older Girls.

By E. and N. WALLACE. (2s. net. Blackie.)

A sound introduction to economics for the use of older girls. Although primarily dealing with household finance, it contains some reference to local and national finance, which have now such a profound influence upon the effective dimensions of the family income. The admission of women to the full status of citizens calls for their instruction in these matters.

MISCELLANEOUS.

The Making of Wellington College. Compiled by J. L. BEVIR. (7s. 6d. net. Edward Arnold.)

In his attractive introduction, Sir Ian Hamilton speaks of this as a booklet, which hardly does justice to the handsome volume. Most of the material is supplied by the notes of the late C. W. Penny, written after he had left school, where he had been Benson's right-hand man. The record is naturally the history of Benson himself, who takes rank as one of the great schoolmasters. The strong personality, the violent temper gradually coming under control as the years passed, the vehement dealings with governors, the delegation of authority to capable prefects—all is there as it should be. Benson was true to type. The school in itself has, of course, special qualities due to its foundation and situation, but Benson has obviously impressed himself upon it in a way that has brought him into the line of the great heads. No doubt the limitation to the first sixteen years of the existence of the college tends to a false perspective of the work of the present Head and his immediate predecessors, but their turn will come in due course. Meanwhile there is an artistic completeness in the sketch supplied, and outsiders will benefit by a treatment that only old Wellingtonians can fully appreciate. Thanks to Benson and his successors, the market towns of England will feel that the proposed bronze statues of the Duke of Wellington are well lost in view of the gain of such a college as Wellington.

Collected Prose of James Elroy Flecker. (7s. 6d. net. Bell.)

Our professional interest in this book is confined to the hundred pages in the middle devoted to "The Grecians: a Dialogue on Education." Its literary merits are great, and its value as a stimulus to discussion unquestionable. Socrates, Vittorino, and Milton are the educational sponsors of this brilliant dialogue. It would be hopeless to synopsise the argument. Its charm lies in its style and its provocative stimulus. If the reader can imagine a compound of H. G. Wells and D'Arcy Thompson, he will get some idea of the flavour of the book.

Cocoa and Chocolate: their History from Plantation to Consumer. By A. W. KNAPP. (12s. 6d. net. Chapman & Hall.)

The author of this attractive book is an expert in all matters relating to cocoa and chocolate. He gives first-hand information and treats the subject in a scientific manner. After an interesting account of the history of cocoa and chocolate, he proceeds to explain the method of cultivation of the cacao tree and the preparation of the beans as an article of commerce. The various processes of manufacture of chocolate and the machines used in the factories are carefully described. Tables are given to show the cacao production of the chief producing areas of the world, as well as the composition and food value of cocoa. The text is well arranged and very clearly printed; it is illustrated with more than a hundred pictures and diagrams, and at the end of the book there is a useful bibliography. The book is therefore particularly suitable for the general reader. As a work of reference in the school library it would provide much valuable information for lessons in commercial geography.

"Pitman's Common Commodities and Industries."—Gold: Its Place in the Economy of Mankind. By B. WHITE. (3s. net.)

This book is one of Pitman's well known series of textbooks on common commodities and industries. It deals with an exceedingly interesting subject in a clear and concise manner. The production of gold from the earliest times to the present day and the evolution of British coinage are described at some length. The chapters on the gold standard, the industrial use of gold, and the importance of gold during the period of the Great War deserve to be specially mentioned. Several useful statistical tables are given, showing the world production of gold year by year from 1887 to 1917 and the world's stock of gold currency in 1913.

SCIENCE.

Vertebrate Zoology. By Prof. H. H. NEWMAN. (16s. net. New York: The Macmillan Co.)

Many excellent guides to practical work in the comparative anatomy of animals are fortunately available for students, but there is always room for new books of moderate size, pointing out

the significance of the facts encountered in the laboratory and their relation to other aspects of zoology. For, while the facts remain the same, their interpretation grows ever clearer in the light of new knowledge. Prof. Newman's many-sided review of the vertebrates should be welcomed by all thoughtful students of zoology. Though the greater part of the book is naturally concerned with the morphology of the vertebrates as a whole, and of their constituent classes of animals—of which an admirably clear account is given—its special claim to distinction lies in a marked subordination of anatomical detail to the physiological and evolutionary considerations which are now recognized as the very essence of the science. Thus it gives more attention to the dramatic early history of the vertebrates, and the various theories of their origin, than is usual in books of this size, and is also generous in the matter of embryology and ecology. The author is an enthusiastic advocate of the "axial gradient" conception of Prof. Child, and applies it in an interesting manner to several problems of morphology. His interpretation of highly specialized types as the consequences of "differential inhibitions" is particularly suggestive. The book is a sound guide to the established facts of the subject, and full of thought-provoking ideas on what is still speculative. It is attractively got up, and contains 217 useful illustrations. As a college textbook it may be recommended with confidence.

Internal Combustion Engines. By Lt.-Com. W. L. LIND. (10s. net. Ginn.)

In this book an attempt has been made to provide a practical and up-to-date text on internal combustion engines, arranged so as to meet the requirements of the average student. Design problems have not been included, but a brief account of the theory of various cycles is given in Chapter III. The author is an officer in the United States Navy, and hence it is natural that American practice has been drawn upon largely for the matter in the book. Practically the whole of the contents is descriptive, and includes such subjects as the Otto and Diesel cycles in practice, carburetors, ignition, lubrication, regulation of speed, aircraft, marine and automobile engines. The book has many line drawings as well as pictures of engines and engine details, and these, coupled with the clear descriptions of the action, will make the contents of interest and value to those charged with the duty of handling internal combustion engines. At the end of the volume there is a useful "trouble chart," giving the names of the parts at fault, the trouble, how it affects the engine, and the remedy.

Space-time and Gravitation. By Prof. A. S. EDDINGTON. (16s. net. Cambridge University Press.)

Books of this type are particularly welcome at the present time, and no one is more competent than Prof. Eddington, who has for a long time been associated with Einstein's theory of relativity, to explain the theory. The vitality of the subject of physics has been so greatly exhibited on the experimental side during the last twenty-five years that most physicists have been fully occupied in keeping abreast with and helping to develop this experimental side, and the progress of mathematical physics has been relegated to a comparatively small number of workers. The solar eclipse expedition of last year led to startling evidence in favour of the relativity as against the Newtonian outlook, and it is one of the features of the present book that the author took part in one of the two observational expeditions and describes briefly the expedition and the results obtained. The book opens with a prologue consisting of a conversation between a physicist, a pure mathematician, and a relativist, in which the position of the last with respect to the other two is made clear. The starting point of the theory of relativity, consisting of the Michelson-Morley experiment with the explanation of the Fitzgerald contraction is then described. From this, the new idea of a four-dimensional world with time as the fourth dimension is developed. Purely mathematical points are given in a series of notes which are all too brief. The author delights in paradoxes, but explains that the paradox arises from the erroneous nature of the ordinary views regarding space. The theory is continued from the part which is well established into the later and more speculative matter, and it is shown how not only gravitation, matter, and energy, but also the electromagnetic field, is due to the form of the geometry of space-time. The book is likely to have the effect of turning the attention of many physicists in the direction of the theory of relativity.

Just Look! or, How the Children studied Nature.

By L. BEATRICE THOMPSON. (5s. net. Gay & Hancock.)

This is a Nature-study book of a type less common nowadays than it was twenty years ago. It tells how an apparently omniscient young person, Dorothy Marshall, deals out miscellaneous information concerning animals, plants, volcanoes, the solar system, and so forth, to a group of children of conveniently omnivorous minds and insatiable curiosity. If lower form readers accept the fiction,

THE BOOKS

FOR "ROARS OF LAUGHTER"!

By BEARD FRANCIS.

HIGGS!—AND POTTER. (Third Edition.) 3/6.

The Daily Telegraph says: "The author has a kind of penulibility, he does 'run on so' that the reader in search of light entertainment will find that a wet afternoon of his own holiday may be passed quite agreeably by following the seaside adventures of Higgs and Potter."

Financial News says: "Will throw you into roars of laughter."

HOW LIKE A MAN. 6/-.

The Times Literary Supplement says: "The author has an immense wealth of facetious humour."

The Pall Mall Gazette says: "Written, we infer, in a burst of high spirits, the story moves in one wild onrush. We could quite easily believe that, with lovers of comic pictures, Mr. Francis would make his mark."

COMEDY AND TRAGEDY. (Just published.) 6/-.

The Scotsman says: "Its seven short stories—boisterous razzle-dazzle humorous yarns of each of the years from 1913 to 1919—are in line with the tempestuous temper of the time they portray, and move with a vigorous and compelling swing that is certain to confirm the writer's popularity as a strenuous and entertaining painter of people who cannot settle down."

The Sussex Daily News says: "Is, in its way, a little gem; reflects with real skill a large section of good hearty British taste."

The Birmingham Gazette says: "Cleverly written, with humour and force, and climacteric effect."

SPECIMEN COPIES at less than cost price to Teachers.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & CO., Ltd.
4 STATIONERS' HALL COURT, E.C.4.

they will no doubt be interested also in the facts which are skilfully interwoven with it, for Dorothy, in spite of her erudition, is by no means so forbidding as some of her prototypes were. The book is attractively got up, with fifty-eight plates by the author.

Animal Ingenuity of To-day. By C. A. EALAND.
(7s. 6d. net. Seeley, Service.)

The sub-title of this book adequately describes the contents of the volume. It is "a description of the skill, clever devices, and stratagems of birds, reptiles, insects, and other forms of animal life, their means of subsistence and protection." The twenty-six well reproduced illustrations add greatly to the attractiveness of the book. To boys with the sporting instinct, Mr. Ealand's chapters will make a strong appeal.

FROM MR. HERBERT RUSSELL'S LIST OF BOOKS.

A Digest of British History. By S. H.

McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp. Price 3s. 6d. net. Also Published in Three Parts as under: Part I, B.C. to 1485. Part II, 1485 to 1789. Part III, 1789 to 1912. Price 1s. 4d. net each.

Mr. Oscar Browning in his Introduction says:—

"I can conscientiously recommend it, both to teachers and learners: the first will find it an excellent syllabus for oral teaching, without which no efficient instruction in history can be given, and the second will find it useful in revising what they have been taught, and in breaking new ground for themselves. For these reasons I venture to predict for it a wide circulation."

The Shining East. (Book I of "The Ancient

Civilisations" Series.) By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo, cloth, 167 pp. Fully Illustrated, with Photographs and Maps. Price 2s. 6d. net.

"THE SHINING EAST" is a fascinating story, as told by Emily Burke, and should hold the attention of adults almost as much as that of children, for whom it has been especially written. It is designed to awaken interest in a study that has many claims upon the youth of the country, and ample success should reward the lady's efforts.—*Manchester Courier*.

The Violet Crown and the Seven Hills. (Book II of "The Ancient Civilisations"

Series.) By EMILY M. BURKE, L.L.A., Hornsey County School, Author of "The Shining East." Crown 8vo, cloth. Price 3s. net.

"This is the story of the glory that was Greece and the grandeur that was Rome. . . . Miss Burke's is a pleasant method, for she never bores us with too many hard facts and her historical outlook is that of a well-equipped scholar who is conscious that a good deal more than what old-fashioned history books would have given is necessary to explain the ancient world. She talks rather than writes, quotes poetry, and can appeal when necessary to modern instances."—*The Times Educational Supplement*.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.
CONSTITUTED BY ORDER IN COUNCIL, 29th FEBRUARY, 1912.

TEACHERS ARE REMINDED THAT ON THE FIRST OF JANUARY, 1921, THE PERMANENT CONDITIONS OF REGISTRATION WILL COME INTO FORCE. APPLICANTS FOR REGISTRATION WILL THEN BE REQUIRED TO PRODUCE EVIDENCE OF ATTAINMENTS, TRAINING IN TEACHING, AND EXPERIENCE AS PRESCRIBED BY THE COUNCIL. *****

Until the *31st DECEMBER, 1920*, however, a Teacher may apply for admission to the Register on the ground of satisfactory experience, but in the case of Teachers working in public elementary schools they must have been recognized by the Board of Education as certificated teachers before being eligible to apply. Private teachers are required to produce evidence of satisfactory attainments in addition to experience in teaching. All qualified Teachers who are not already registered should apply at once for full particulars, and a form of application, which may be obtained from

THE SECRETARY,
TEACHERS REGISTRATION COUNCIL,
47, BEDFORD SQUARE,
LONDON, W.C.1.

SOME STANDARD TEXTBOOKS

Messrs. Bell's Mathematical Books are, in most cases, issued complete with or without answers: in separate parts, or Examples separately. Please write for details and prices.

Pendlebury's Arithmetic. With 8,000 Examples. By C. PENDLEBURY, M.A. 28th Edition. 5s. 6d.

Pendlebury and Robinson's New School Arithmetic. 16th Edition. 5s. 6d.

Pendlebury and Beard's Commercial Arithmetic. 14th Edition. 3s. 6d.

Pendlebury and Beard's Business Arithmetic. First Year Course. By C. PENDLEBURY, M.A., and W. S. BEARD. With or without answers, 3s. 6d.

Pendlebury and Beard's "Shilling" Arithmetic. 568th Thousand. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's New "Shilling" Arithmetic. 13th Edition. 1s. 9d., or without answers, 2s. 3d.

Pendlebury and Robinson's Junior Arithmetic. 12th Edition. With or without answers, 2s. 6d.

Pendlebury's Preparatory Arithmetic. 4th Edition. With Revision Papers, 2s. 6d.

Baker and Bourne's Public School Arithmetic. By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. 5th Edition. 5s. 6d.

Baker and Bourne's Student's Arithmetic. 8th Edition. 4s.

Baker and Bourne's "Shilling" Arithmetic. 5th Edition. 1s. 9d., or with answers, 2s. 3d.

Arithmetic for Preparatory Schools. By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell. 4s., or with answers, 4s. 6d.; or Part I, 2s. 6d.; Part II, 2s. [Bell's Mathematical Series.]

Problem Papers in Arithmetic for Preparatory Schools. By T. COOPER SMITH, M.A., Mathematics Master, St. Peter's Court, Broadstairs. 2nd Edition. 2s. 6d. [Bell's Mathematical Series.]

Arithmetic. By H. FREEMAN, M.A., formerly Mathematics Master at the Haberdashers' Aske's School. 7th Edition. 3s. 6d. [Bell's Mathematical Series.]

Arithmetic. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I, 2nd Edition, 3s. 6d. Part II, 3s. 6d. [Bell's Mathematical Series.]

Commercial Arithmetic and Accounts. By A. RISDON PALMER, B.A., B.Sc., and J. STEPHENSON, M.A., M.Com., B.Sc. (Econ.), both of the Regent Street Polytechnic. 6s. net. [Bell's Mathematical Series.]

"... It almost makes one wish one were a modern child, so that that one could be educated on such a book."—*Nature*.

A "Shilling" Arithmetic. By J. W. ROBERTSON, M.A., B.Sc., Mathematics Master at Senior Central School, Aberdeen. 6th Edition. 1s. 9d. net; with answers, 2s. 3d. net.

Baker and Bourne's Elementary Algebra. 17th Edition. 5s. 6d.

Baker and Bourne's Shorter Algebra. 5th Edition. 3s. 6d.

Baker and Bourne's First Algebra. 9th Edition. 2s. 6d.

Elementary Algebra. By CLEMENT V. DURELL, M.A., Senior Mathematics Master, Winchester College, and G. W. PALMER, M.A. Part I. With Introduction and Full Answers, 4s. 6d. Without Introduction, and with Answers (perforated), only where intermediate work is required, 3s. 6d. Part II. By C. V. DURELL, M.A., and R. M. WRIGHT, B.A., of Eton College. [In the Press.]

Baker and Bourne's Elementary Geometry. 12th Edition. Revised, 5s. 6d.

Baker and Bourne's New Geometry. 4th Edition. 4s.

Baker and Bourne's First Geometry. 5th Edition. 2s.

Borchardt and Perrott's Geometry for Schools. By W. G. BORCHARDT, M.A., and Rev. A. D. PERROTT, M.A., of Cheltenham College. 5s. 6d.

A Concise Geometry. By CLEMENT V. DURELL, M.A., 5s.

Borchardt and Perrott's New Trigonometry for Schools. 12th Edition. 5s. 6d.

Borchardt and Perrott's Junior Trigonometry. 4s. 6d.

Borchardt and Perrott's First Numerical Trigonometry. 3s. 6d.

Plane Trigonometry. By H. L. REED, M.A., Royal College, Colombo. 2nd Edition. 4s. 6d. [Bell's Mathematical Series.] "The best school book on the market."—*A.M.A.*

Statics. By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. 5s., or Part I, 3rd Edition, 3s. Part II, 3rd Edition, 2s. 6d. [Bell's Mathematical Series.]

Dynamics. By R. C. FAWDRY. 5s. Or Part I, 3rd Edition, 3s. Part II, 2s. 6d. [Bell's Mathematical Series.]

Statics and Dynamics.—First Parts. By R. C. FAWDRY. 5s. *The First Parts of the above two books bound together.*

A First Course in the Calculus. By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. With Answers. 8s. 6d. Or Part I, 3rd Edition, 4s. Part II, 5s.

Differential Calculus for Colleges and Secondary Schools. By CHARLES DAVISON, Sc.D., formerly Senior Mathematics Master at King Edward's School, Birmingham. With Revision Exercises, Essays, and Problem Papers. 6s.

Textbooks by Prof. Smith.

Introduction to Inorganic Chemistry. By ALEX. SMITH, B.Sc., Ph.D., F.R.S.E., Prof. of Chemistry and Head of the Department, Columbia University. 35th Thousand. 12s. 6d. net.

Experimental Inorganic Chemistry. A Laboratory Outline for use with the above. 6th Edition, revised. 5s. net.

General Chemistry for Schools. 45th Thousand. New Edition, revised and enlarged. 10s. 6d. net.

A Laboratory Outline of General Chemistry. For use with the General Chemistry. 4th Edition, revised. 47th Thousand. 4s. net.

Intermediate Chemistry. With numerous Illustrations. 9s. 6d. net.

Elementary Chemistry for Schools. Adapted for use in English Schools by H. A. WOTTON, M.A., B.Sc., formerly Head Master Kingswood School, Bath. 6s. net.

A Laboratory Outline of Elementary Chemistry. For use with the Elementary Chemistry. 2s. 6d. net.

Inorganic Chemistry. By JAMES WALKER, B.Sc., Ph.D., F.R.S., Professor of Chemistry, Edinburgh University. 12th Edition, revised and enlarged. 5s. net.

Inorganic Chemistry for Upper Forms. By P. W. OSCROFT, M.A., Uppingham School. 4th Edition, revised. 7s. 6d. net.

An Introduction to Chemistry. By D. S. MACNAIR, Ph.D., B.Sc. 9th Edition. 3s. net.

A First Year's Course of Chemistry. By J. SINCLAIR, M.A., B.Sc., and G. W. M'ALLISTER, M.A. 2nd Edition. 2s.

Standard French Courses.

Le Français: A Practical French Course. By MARC CEPPI and LL. J. JONES, B.A., both of Whitgift School, Croydon. Part I. 2s. 6d. (Part II ready immediately.)

The Direct Method of Teaching French. By D. MACKAY, M.A., and F. J. CURTIS, Ph.D. 116th Thousand.

First French Book. Revised, with new Illustrations. 2s.

Second French Book. With 38 Illustrations. 11th Edition. 2s. 6d.

A Modern French Grammar. Issued with the Grammatical Rules either in French or in English. By MARC CEPPI and M. DESHUMBERT, Professor at the Staff College, Camberley. 2nd Edition. 3s. net.

Le Français de France. By Madame VALETTE VERNET. With Introduction by Prof. ALBERT BARRÈRE and numerous Illustrations. 2s.

"Mme Vernet is a teacher of unusual gifts and great understanding of children."—*School World*.

Grammaire Pratique. By Madame VALETTE VERNET. 2nd Edition. 1s. A companion to the above.

Bell's French Picture Cards. Edited by H. N. ADAIR, M.A., Senior French Master at the Strand School. Sets I, II, III, and III. 2s. net each. Sets of 16 cards, each showing a different scene in full colour with grammatical notes and questions on the back.
